## TOP CHOICE PROGRAMS

- 18 CAULDRON**  
 It's Magic! Drive your DMG around a hostile  
 landscape searching for the ingredients needed  
 for a spell to get you to the Magic Broomstick.
- 26 BRUCE LEE**  
 Fighting action in the castle of a wizard. The evil  
 Green Yarns and Black Ninja do their best to  
 thwart you.
- 32 SPT VS SPT**  
 One on two player action in Beyond's game of  
 strategy and war.
- 32 THE JAWLING FU**  
 More Oriental fighting action, this time it's one of  
 the best martial arts game's the team's best.
- 32 STRANGELOOP**  
 Your mission is to take a factory deep into  
 space. An arcade adventure in which you make  
 friends.

## THE MAIN HEADINGS

- FEDERAL**  
**9:00 THE SPOT**  
 Another meeting and of opinions and views, anno-  
 tated by the OLS team of letter transmitters and  
 commentators.
- 12 NEWS**  
 A run down on what's happened, what's happen-  
 ing and what might or should be happening soon.
- 45 AMTIX**  
 Robin Clark reveals a map of AMTIX LIFE and  
 offers tips, hints and the odd cheat on a host of  
 games.
- 55 ARTECH**  
 Roy Jones looks at a disk utility that lives in the  
 public domain. Gary takes the L3 out of his pack-  
 work here and yours inside the first of three BASIC  
 versions of L3 that get Logosprite on the  
 Amstrad with Revolution and The Wizard. Peter  
 Spencer will have no excuse for spelling it "du"  
 again.
- 67 FROM THE LATHRY DEIN**  
 An 88 covers Peter Star still doesn't take his drink.  
 He's not reading in a spirit of all. From his first  
 come members of THE AMTIX, BOB,  
 MURPHY, and a brief of games from Bob Day,  
 amongst other things.

- 102 STRATEGY**  
 Michael James examines wargaming, as it can be  
 assisted by the computer.
- 114 SIBCON ART**  
 In which we take a quick look at the state of  
 computer art.
- 119 THE TERMINAL MAN**  
 The best judgement of advice.

## CHRISTMAS SPECIALS

- 34 PREVIEW**  
 A quick roundup of some of the better games that  
 should be on the streets soon.
- TALKING TO THE WORLD**  
 Chris Honey leads your Amstrad by the Hand (Part  
 via HODG) through, to a telephone.
- ETERNAL AWARDS**  
 Your opportunity to help prize on these who  
 deserve it.
- 35 A BEE INSIDE GARGOYLE**  
 Roger Kean looks at Gargoyle. Gargoyle went to Dudley  
 and returned the Gargoyle Ltd.

## AMTIX COMPETITIONS

- 38 LITTLE BLACK BOXES**  
 Your chance to test your pack of 24 boxes and  
 see if you're a genius!
- 40 FIGHTING CAPTIONS, Part One**  
 Challenge! Please any captioning job and lots of  
 games on prizes — there's a Big Daddy  
 photograph to write in the Book 'N Write  
 competition.
- 52 WIN A SHOTGLASSER**  
 It's ON! A European Shooting competition, in which  
 you have to display your remarkable knowledge
- 56 SING A SONG OF SIX MODS**  
 Well it doesn't actually compete and all the gear  
 you need is a radio. It's all about the  
 telephone, to be won, courtesy of Cloud Meetings.
- 58 FIGHTING CAPTIONS, Part Two**  
 This time it's all about the games you're for grabs.  
 This time it's all about the games you're for grabs.  
 This time it's all about the games you're for grabs.
- 70 PRINT, PRINT, PRINTY PRINT**  
 Don't your screen space let out. It's time to check  
 the code, reveal the hidden message and win a  
 DATA RAMMER. It's a printer, not a video  
 printer!
- 84 CREATE AN ADVENTURE AND  
 BECOME FAMOUS**  
 Your chance to win a copy of Computer Furniture.  
 Recently revised software, a new version of writing system  
 an offer in this area is certainly worth
- 88 DESIGN A GIG**  
 Lots of odd memorabilia and pay especially on  
 offer, in March's J20 making challenge
- 118 GET INTO WINDGATE IN A BIG WAY**  
 The AMTIX readers are going to win a CD  
 Definitive edition. There's a copy of the  
 software and transfer and a year's software  
 to PRESTEL. Not bad, eh?

Only people who haven't got a brain on all with  
 this January (1985) is the one AMTIX issue is on  
 the streets. But's why!

## FESTIVE FELICITATIONS

It's a very strange sort of business, publishing magazines — the whole process involves a sort of time distortion, which can be a little difficult to cope with. For instance, as this is being written, although the first snow of the season lies descending upon Ludlow, Santa and his helpers are still on the Poles Byways, only a few miles out of the North Pole. The season of Christmas just is somewhat off, yet by the time you read this issue, no doubt you'll be full of Christmas cheer and will have demolished more than a few festive pies.

So it's time for...everyone's Happy Christmas and an AMTIX New Year in this column, thereby sealing a bonanza on Christmas Cards. Closing, at last.

At the close of 1985, which sees this the third issue of AMTIX, all the odds might be appropriate to offer a few thanks to people who have made the whole enterprise possible — and now the odd raspberry in the general direction of those who have made life a bit more difficult.

A resounding cheer must go up for Amstrad themselves, for getting the whole advertisement so well, and so cheaply. They have done a great deal to make Britain computing more than just a hobby for the sedentary soul who'd rather sit well into machine code — and more than just a way of having fun for joystick freaks. Like it or loathe it, the CP/M operating system gives access to a multitude of "serious" programs, and Amstrad must be congratulated for bringing CP/M into the home.

On the raspberry front, allow us to blow one at Amstrad for launching the £129 in such a featureless machine. An excellent machine, offering a great deal for a relatively small sum of money. But the way in which it was launched must have left an awful lot of 664 owners out there who feel more than a little aggrieved by Amstrad's cool promotional tactics. Machines are always out for reducing, price tags, in other, or even consider offering, an upgrade.

Software houses deserve a general pat on the back for supporting the new machine, so thanks to all of you. It could be said, though, if we could see

more original work for the Amstrad in 1986. Converting games from other machines is all very well, but it's high time we started to see "converted from the Amstrad" a little more often in the pages of other magazines. No doubt you will, but let's make it soon, eh?

Of course, are a firm who should do well in 1986. Many business will already know that Di Era entered the market back in 1981 days, making hardware and now that a certain other computer manufacturer couldn't be bothered to get together. Di'Era, seem to be approaching the Amstrad marketplace from a similar perspective and they deserve praise for bringing potential relief to 664 owners who want a little more money. More power to their 664-ers in 86!

A mixture of praise and suggestion should be heaped on the shoulders of Amstrad. While they don't look likely to be producing any games that will be converted to other machines, and have released some pretty poor programs, they have put out some good software. Without them, Amstrads might not have been put to quite so much "hardware"

and

Remember Eighty Six will see the Amstrad come of age. No longer will the whole market be controlled and run by the people who make the machines. As software houses continue to produce innovative programs, hardware manufacturers will continue to come up with new and wonderful gaming to load onto Paradise New Horizons, opening up new frontiers. An AMTIX will intend to continue to keep you up to date with all the latest developments in the Amstrad world, not just on the games front. During 1986, we sometimes should come of age too — three full issues of the magazine are already in the bag, and yours are now about for the New Year.

Without getting too sentimental, we should thank you, our readers, for putting hands in pockets and, ultimately, providing the means by which we stay out of miserable economic forecasts issues. Stay with us, keeping buying us and we'll keep writing!

See you next year — in person at the Festival on January 10th, or on the 18th January if we meet in your local Newspaper's! The Team

## ENSURE YOUR REGULAR COPY OF AMTIX!

When a magazine is rising in circulation being new, AMTIX is doing that and so falls out immediately, you may experience difficulty in obtaining your copy every month. So the best thing to do is place a regular order with your local Newsagent, which you can do by handing him this form.

Please place me a regular monthly order for AMTIX Magazine.

Name .....

Address .....

.....

### To the Newsagent:

AMTIX Magazine is published in the middle of every month by Newfield Ltd, 1,2 King Street, Ludlow, Shropshire SY8 3AJ. Tel: 0584 8861, and distributed to the newsagents by CPM&S (08854 44000). Please check with the publishers if you have any difficulties in obtaining copies.

These boys have some suggestions that COO ought to be replaced with a more professional. But the current board of AMTIX read out the 10th Day event meeting has increased our solidarity, so these pages will soon be working to take account of your letters. Thank you for the lively response, and it's a joy to see that quite a few readers really DO want to put us on the spot. Be—

our own boys.  
 Don't share letters of the month since its entire CO of software of these times, and for this month it is this one!

## DISK PLEASE

Dear AMTIX:

This is the first time I have put pen to paper (or to speak) and written to a computer mag. I purchased a CPC464 a few weeks ago with plans to use it mainly for business, however, the persistence of my two children (and the temptation of those wonderful games) has now got me completely hooked! My only wish is more of the top games on the list.

If software houses are not prepared to go to the expense of putting their top games on disk, the least they could do is to put some form of BASIC loader before the main program, to enable it to be transferred. If it's piracy they are afraid of, surely the pirates will find a way around any protection system anyway!

As the user base for the CPC grows, these companies who do make disk versions or provide some means of backup, will certainly gain additional business. After all, tape is not exactly the most reliable form of storage and the time it takes, well!

One final comment. In your review I would be able if you could state whether software is CPC compatible. I spent nearly a fortune on purchasing the only one I find that it will not load on my machine. I'm expecting that to your local store — they don't want to know, all they would do was exchange it, and the exchanged version wouldn't load either.

Keep up the good work.

David Knowbridge, Fife.

Glad to hear that you enjoy the serious Amstrad stuff — it is a very important facet of the machine. I am not surprised that you have been attracted by the huge variety of games, despite your "good" objections.

The number of titles available on disk is steadily increasing, but the rate at which the quantity of disk software increases is offset by several factors — not least the availability of the disks themselves. Software houses have to be sure their enough people will want to fork out the extra couple of pounds for games on disk before releasing them. Companies are understandably cautious when it comes to releasing titles on disk — a cassette is cheap to produce, a disk can cost an extra five pounds, which represents a substantial increase in the value of returns to the producer if a title does not sell out.

As to piracy you are quite correct, almost any protection system can be cracked by a real hacker, but software houses feel that most of the damage is done by the average user who just passes a copy around friends.

Why of The Expanding Fox should lead into your #128 — it leads into mine, at any rate. It might be worth checking your cassette and lead. One further point: if you go into a shop and ask for a game to rent, your friend will only say that what it shows, then the shop is obliged to give you a refund. The idea of "rent" implies a loan, not merely confined to the effect that a product must be fit for the purpose for which it was sold.

 Schneider

Melbourne  
 House

## FURY WITH FIST

Dear AMTIX: In your first edition you imply that The Way Of The Fighting Fist is compatible with the #128. After talking with my boss about this I was informed Amstrad. Their comment was that the cassette was not compatible.

I thought I would mention this, as the kids in our school are bound to question your future recommendations.

Margan Probert,  
 Worcestershire.

PS I am aware that perhaps the mistake was on Amstrad's part and perhaps we had a faulty tape.

Sorry Margaret, we are in the clear this time. Amstrad are quite willing to have told you that the game is not compatible with the #128. It is. Just to make sure, I checked up to Mail Order, mugged Apple and made

off with a copy. It loaded first time.

However it may be as well to point out that there is a degree of confusion about which games will work on the #128 and which ones won't. By now, every software house has heard of the #128 and they seem secure in the knowledge that it won't be replaced for... well weeks. That being the case, any company creating a game they will only run on the #128 should be shot, Corporately.

We feel that since the vast majority of software can be loaded onto any of the three machines, it's a little superfluous to point out the fact in every review. So unless we tell you otherwise, all games reviewed can be loaded onto any Amstrad, with the exception of the PCW #286 — it doesn't like games so we don't review it.

013

## 30 AMSTRAD RS232 INTERFACES TO BE WON

### ER ... BOPS!

Dear Anita  
I feel your profit readers may be in for the work — but that will depend on how you depend on me to review (and I will) for most information available magazines.

In your article up for the competition for which I wish an early copy (and I will) to review for you, the RS232 interfaces to the small and the big are the small profit. However, in large bold letters at the top of page 81 you state that there are 30 interfaces plus a couple of that you either could be interested in reviewing or a few long list of articles, even if my name does not feature!

Aside from this little group, I have been waiting for some time for someone to bring me some data, including a review of games or music for the Amstrad. I must point out that it never stops in the level of using such a brilliant machine for

games playing, in a... A, not very often, anyway.

Particularly at the moment of it right for all hopes, it is not clear how the game is going through the computer adventure game. But don't worry, take some of the fun away for the rest! My computer has been reviewed in several magazines, including you, and I have been able to see the article.

Marie Cahill, Wexham

Don't underestimate the Grand! Proof Readers, in the end, the can't look a proof reader, but even several, as we haven't got one, as such. Writers, however, provided the Competition Machine who write the great work is possible to be read. Several times, I find myself to be able to do the small print! In this case, there's no way to do it in the way I see how to do it. I have been reading your magazine.

On the subject of games, objects and more you rate an interesting article. In every way, it's better as games seem to have a lot of interest in the game themselves in some articles. To be fair, it's fairly reasonable to expect that printing jobs take the best out of games for some people. I have been reading your magazine and I have been reading the magazine if they don't want their job spoiled, now do they? OVS

meeting other computer users society, as lots of tips and hints tend to get exchanged and personal advice from people who've encountered problems similar to your own is often really more useful than access to a library of books. People are generally more 'user-friendly' than the printed word! OVS

### THIS MONTH'S TOXEN LOONIE

Dear Anita  
You mentioned in issue one that people could write to you letters about anything. Well, I decided to take you up on that offer, but my letter will say about nothing. Here a lot of people bring nothing about, even if they are too excited to admit it.

If you have only just finally realised I'm not joking when I told you nothing had anything to do with this letter, there let the suddenly drop all doubts. Nothing has nothing to do with this letter. As the more intelligent among you will by now have realised, this letter is actually concerned with Level 9 adventures. For the unknown amongst you, the unknown adventures can seriously damage your memory — take me as a classic example.

My final paragraph is an offer of help to anyone who is interested in the adventures. I'm sure that if you have completed I can also offer a lesser degree of help in Levels of Time and Dispute Adventures, look forward to hearing from fellow competitors.

Alan Wright, 64 Rowhill Rd, Moss, Cheshire, Cheshire

Nothing surprises us, nothing at all! Let's hope people who drop Alan a line about adventures receive more than nothing in reply! Nice offer, though Alan, thanks. OVS

### THANKS FOR THE MEMORY!

Dear Anita!  
How those poor people who find themselves furnished with a "phased out" computer must feel. First of all they are quite happy, clucking away on their new Amstrad, that suddenly they find themselves furnished with a technical book! — or now they get stuck with it! Maybe Amstrad will come to their senses and offer a trade-in deal, for those who want to change computers?

Keith Parkin, Walthamstow, London

PS Any BIDDERS for Amstrad AMTX1 binders are underway, and should be available fairly

early in the new year. No more firm details just yet, though.

It seems there's going to be little point in waiting for an upgrade from Amstrad themselves. People with 486s may wish to turn to a memory expansion facility offered by De Tronics, reviewed in Amstrad this issue. ... patience will get their numbers, as it's a free "blunder down" from Amstrad when it comes to doing business for 486 owners. Their final word is "no", quite clearly. OVS

### TO THE POINT

Amstrad No 1, Nov 85  
What a missed opportunity — more like a missed game. Games will be like a DODG on a year's time — AMSTEX SECTION: FULL MARKS — more of this, less of the others. Colours has made lower part of page 71 illegible. I'm sure you can do better than this! I hope K Douglas, Marlow, Bucks

Er Yes, You don't have to print in black and white to be careful (but you do have to be careful of the labels). Will try harder next time — or later. Not convinced about the Dodds, though. OVS

### RECIPES FOR SUCCESS

Dear Sir  
I am 84 years old and am fairly thick with it. I was presented with my first computer (Amstrad 486) nine months ago and still at the 'user-friendliness' I can get.

I have three magazines written for the Amstrad regularly and find that yours is the best. I can see a great future for you, provided that you do not assume, as one of your competitors does, that all readers are aged 18, brilliant programmers from birth, who know all the intricate details of hardware which is advertised and have bottomless pockets. In addition to this, they are quite a useful advertising medium. 70% of the magazine, 10% of space for details about hardware which are not understandable and 2% for software reviews. The remaining magazine seems to be aimed exclusively at those clever 'programmers' who know all the answers about computing.

Success must surely lie in keeping the ignorant ones happy as there are far more of us! I would suggest that a couple of pages of your magazine should be devoted to simple question and answer material. I would also like to see more detail being supplied by software firms about their

products. The latest tape I bought seemed to be about a professional shop-fencing down an endless street — and that it ran down for the life of the support in your magazine, I would have some admiration of your of the future ... it is the first taste of 'adventurer' and was wonderful. You do a splendid job of steering us away from inferior software.

Richard Lamb, Gillingham, Yorks

It's surprising how many 'older' people are involved in home computing — finding out about the intricacies of your machine and picking up programming technique if you get serious can be a time-consuming task. It is generally only people with time on their hands who can really get into the subject, and such people tend to be at school, unemployed, or retired.

We do try to bear in mind that not everyone is a computer whizz, and will continue to run these as a sign of our technical nature which offer an introduction to areas of computing in the hope that our readers will be able to continue their travels on their own.

It can be said it is a very daunting task, getting to grips with computing, particularly if you're on your own. It's well worth getting in touch with — or maybe even starting — a local user group. It's well worth

## ELIMIA'S 'BEST GAME SET'

Games have announced *Elimia*, their latest arcade adventure for the Amstrad computer range. The game involves flying a jet across great swathes of terrain hidden in the labyrinthine topography of a central mountain. Gaining access to the complex is both difficult, but there is reward to the quest that this. There are twenty-eight different enemies to encounter and a wide variety of objects some of which reconfigure the map.

Jim Gray, Sales Manager of Games, says: "Amelia is our best game yet. There is plenty of action and shooting involved but the player must also use strategy to complete the game successfully, a winning combination."

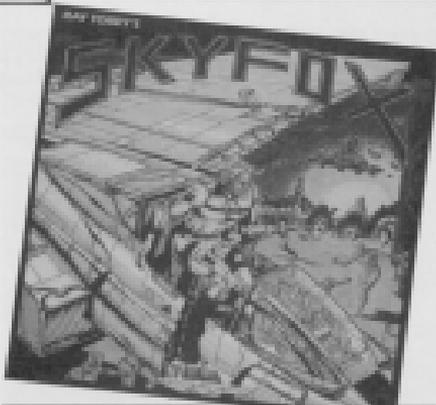

Jim Gray's words will soon be put to the test as *Amelia* should be available for £15.95 on cassette for the time you read this. A disk version is to follow. Stay tuned for a review.

## THE RETURN OF ERROL FLYNN?

Spontaneous burst of creativity and originality, along with some far-reaching and innovative ideas, accompanied the release of *ERROL*. The people who originally conceived the programme, *ERROL* and *ERROL* are now busy working on the Amstrad conversion. Set in the 1930s, it allows you to play Errol Flynn as the star of a silent film. Errol has to rescue a woman in trouble and save the world and more. *ERROL* is being developed in full style graphics to achieve original and thought-provoking simple, vital and yet layered images. It will have Music, Graphics, a Story, a variety of responses, an Amstrad conversion, a time for the *ERROL* such as being an Amstrad at £15.95.

## AMSTRAD BIRDSONGS

The significantly named *Birdsong Software*, set up by British Telecom and run by Tony Bardsley, will soon be releasing the *Music System* and *Advanced Music System* for the Amstrad. Having originally appeared on the BBC, nearly year back, quite a few alterations and enhancements have been made to the original specification. Inland Logic, publishers of *EMS* and a distributor of Island records, have incorporated facilities for managing a month-long record through MIDI on the back of your games. The *Music System* is priced at £14.95 for tape and £11.95 for disk. *Advanced Music System* will set you back £28.95 and is available on disk only.

## FROM FLIGHT SIMULATORS TO STRATEGY GAMES

After receiving a rave review and a Golden Medal in our earlier column, *COAST* has become a hot tip for conversion from the Commodore 64 to the Amstrad. The press release says that *Coast* is a 3D scrolling flight simulator that includes 15 scenarios, from what looks like a car and air to general combat, war. In *Coast* you can take control of a plane, a ship or a tank. It's a pretty good deal for £15.95.

available in a cassette and disk of the time.

After a successful release in the past before it, *Coast* is a total Commodore 64 derivative designed by Thomas, a representative of *Coast*'s 4. *Coast* is a 3D scrolling flight simulator that includes 15 scenarios, from what looks like a car and air to general combat, war. In *Coast* you can take control of a plane, a ship or a tank. It's a pretty good deal for £15.95.

## YOUR COMPUTERS SHOULD BE TALKING TO EACH OTHER

People may reach this humble mission of a variety of interfaces for the various reasons. Available from Commodore of Britain, who supply the OCP Microdevelopment range, OCP have developed an 'Intercom System' which allows a basic program to be installed so that one computer can talk to another. OCP have developed for any given micro. Owners buy the Intercom for their particular system and can then speak to any other computer (as long as it runs the correct Intercom) by connecting a common interface. The Amstrad Intercom (1985/1984) computer costs £11.95. The system requires more than just the device Intercom, and those receiving more information about the system should contact Commodore on 01-8764 1235.

## SPONTANEOUS SOFTWARE

Previously unheard of, *Patent Computer Services* are due to produce an *ERROL* program for the full host of Amstrad micros. (Over into the expansion port, *ERROL* will enable the end-user to create *ERROL* containing instantly accessible software. No more waiting time minutes for any of your *ERROL* programs. It is the *ERROL* that will be more than just a mere device, as it should prove easy to use even for the most inexperienced *ERROL* program. The software is supplied on tape as standard. Although the user cannot edit it's possible to upgrade software to even *ERROL*. *ERROL* will set you back £28.95 and should be reviewed in next issue's *Amstrad* (Patent writing).

## BEAUTIFUL ARTWORK BUT WHERE ARE THE GAMES?

Months after the release are two new titles from Ultimate.

*Cybern* and *Gunfright* should be available by the time you read this, but at the moment, following their *Ultimate* status, there are 'no details available'. But we do know is that both titles will be developed in Ultimate's solid plastic covers

with striking-looking glossy face artwork. I know it doesn't make very interesting reading but you should be able to get a lot of idea what they'll be like from the illustrations appearing elsewhere on this page (Patent writing).

## FREL VENTURES OUT ON THE AMSTRAD

Ludlow still has problems. Fred Led Rover just landed from the Amstrad and noticed the Japanese boot box. A decision: money is 50 dollars versus two sets that have come to him as the ability to reach more than one person in the machine's software. Of course, a lot of the software Amstrad is unable to record. Fred's family like to do in stores

Two standard systems were shipped into the one post assigned on the machine. Compatible with the complete range of Amstrad was found. Reports states at 10.00 and will come be available through both mail order and retail outlets.

## THE REAL POEL — NEWSTAR STORY

William Poel, managing director of Newstar Software, is apparently concerned with some of the "garbled" messages appearing in the computer press regarding his departure from Amstrad, feeling that the circumstances have been "misled by the media".

He sees the purchase of Newstar as a logical progression from his role within Amstrad (and) he intends to support CPAI software for the Amstrad range. Mr Poel also mentioned his company "can do the applications software what Amstrad has done for hardware".

Amongst the many items of software available from Newstar (some of which are exclusive), is the NewWord wordprocessing/mailing package, complete with 85,000 word spell checker which sells for 99.00 inclusive of VAT and is now being this issue.

Mr Poel left Amstrad under perfectly amicable circumstances simply to support the CPAI business side of Amstrad computing, as he was dissatisfied by the "inflexibility of the computer".

## OF GODS AND WARS AND TRIVIAL PURSUITS

A new software house has recently been formed by three university undergraduates with previous experience of mostly BBC and Amstrad programming. Responsible for several titles including *Clifford Curtis*, *Blackboard* and *Mr De*, Amstrad's first Amstrad release is *Spangley*, the game of the Gods. Within *Spangley* each player assumes the role of an ancient Greek god and controls a group of mythical warriors in a 2D courtyard. Really a type of trivia quiz game, the different groups of warriors must do feats by answering a variety of questions on one of four topics. Many multiple-choice enquiries — 80% of the package is set to contain over ten thousand different questions, and should appear on the Amstrad platform in the New Year on disk based — probably answering the drive to new level new sets of questions. Though a little above average at £14.95, most new markets should be able afford to be good for a day.

## LCP SYNDROME SPREADS

Earlier this year, the research team at Business discovered that there were five fundamental practices actually living inside Commodore machines. After successful communication with these inner-spring creators and registration of their habits in kind of new and a half story manuscript, they revealed the Little Computer People Discovery Kit to that extent of that they could also control those friends and individuals folk. It now manages that these machines may also include the Amstrad range of computers. The research team that an LCP kit should be available early in the New Year.

The kit consists of a disk the Little Computer People appear to lose software, a set of membership letter kit, they are yet compiled the LCP magazine and an membership guide to help spread good and person being a lot off by classes owners. They cost 10.00 and are perfect for those times.

## AN OASIS IN THE OCEAN?

Following Ocean's acquisition of Ocean software, utility programmers administrators, a work of programmer's skills are set to appear under Ocean's 83 label. First to be released for the Amstrad is *Laser Basic*, an extensions package adding more than two hundred commands to the basic ROM. Handful additions among the new version of kit are a group of Functions that provide upto 260 software sprites, positionable anywhere on the screen. Other handy additions include the ability to access the 260 user log, system with a flexibility usually only found in machine code. Also part of the package are comprehensive user and manual editors that produce data in a form compatible with your Laser Basic programs.

Ocean have not been long closing their last couple of month's sales and other products due to be released under Ocean include a Compiler turning Laser Basic programs into fast, compact machine code, a 260 memory assembler with a very speedy assembly time and *White Lighting*, an extended version of Font specially designed for producing game type programs. *Laser Basic* will shortly be available at £14.95 for laser and £18.95 for disk while *White Lighting*, the Compiler and the Assembler should be ready some time in the new year. Watch Amstrad for details, in depth reviews.

## NORTHERN AMSTRAD PROLIFERATE

The local users group continues to grow as the Amstrad range enters the Manchester area. Well, enough to them and have been organized being set up that the Manchester

The Northwest Users Club is a friendly initiative open to people from Manchester. Membership is a party £8.00 for one year. Membership forms are available from M.U.P. Club, 14 Millfield Place, Gorton, Manchester M14 6JL.

The Manchester Amstrad Users Club has been organized by Mandy computer at the

Openware (Software) Village. A newsletter is also published once a month and will include club membership information. To join you'll have to pay four pounds for a year's membership. Further information is available from Steve Stevens, 27 Gillingham Avenue, Longsight, Manchester, M14 5JH.

## HERBERT'S DUMMY RUN

**Micro-Gem, \$9.95 cash**  
**Author: The Micro-Gem team**

Now you should all remember Herbert. He's the little chap from the Walsh family whose inspiration became a toy re-named as Zynopol's a Wally. In the game Herbert has become separated from his Mum and Dad during a visit to the local department store. It is up to you, the player to guide him back to his parents who are waiting for him in the LOST AND FOUND department.

The game begins with Herbert in the toy department at 1 pm; the store closes at 5.30 and you have four and a half hours to retrieve Herbert with his parents, since the game is played in real time. In both style and presentation Herbert's Dummy Run is similar to *Jeeves*'s a Wally, which is not surprising as it's the third game in the Wally trilogy (Dummy runs in a general adventure game that calls for a high degree of acuity skill as well as a degree of lateral thinking. The opening screen is typical of the game: Herbert finds himself standing in a box in the toy department; you notice at the top of the screen a series of shelves loaded with a wide variety of toys. How can Herbert reach up there? Well of course the box he's standing on is a sack in the box, and when the toy has been retrieved the spring action will propel him up onto the shelf.

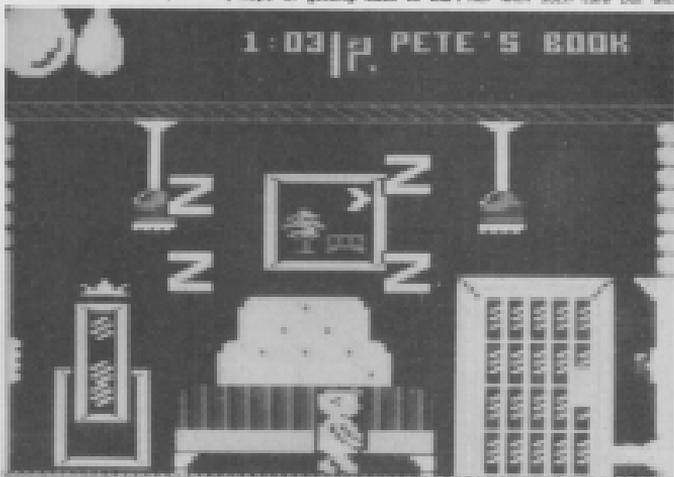

As with other Wally games, many of the screens take the form of well known arcade games. One screen can only be solved by disassembling a clock. "Breaker" style — if you manage this the resultant pot on the head is well deserved.

The game would be too easy if you could pick up and carry every object that you came

across. Only being able to carry five objects at a time forces you to do a little forward thinking. At the top of the screen you see

write and the over all game play should tempt you showing your fingers to the stick. The game includes some very nice ideas, and some of the arcade rooms feature great ideas of puzzles and skill to defeat, but Herbert's Dummy Run is not a game that you must if you see to have any hope of getting back to the

screen which keeps you sitting on the edge of your seat. But overall this is the classic type of highly graphical arcade adventure I know that the Wally fans will give over the latest addition to the family. But I wouldn't mind seeing another game set against her with such care but with

reminded of what objects are in your possession — the one that you have had for the longest is automatically exchanged for another "valuable" piece as you make good it. As you explore the store looking for the ways and means to solve the game you are under constant pressure from a wide variety of mobile "things". You have three lives and when you come into contact with some of the nastier more springy, shown by a large bar that fills up will be reduced until you escape the mania, or lose that life. A few mobiles act immediately on contact so you will have to learn to identify them quickly. You are able to reverse the direction your strategy by using the events found scattered around the store.

For his efforts, Herbert is rewarded with his favourite jelly babies, and the closer he is to finding his parents the more he will get. All over the game he needs to avoid traffic like screens, but don't expect Herbert to get fat on jelly babies too soon!

### CRITICISM

**1** At best the Amstrad has caught up with the Wally family. The fans should be well pleased with this effort. The graphics are very all-

parents. For me this was the best in the series, probably because it was a little less interesting with the rest of the family safety out of the way. I dare say some will miss the other characters. However I do think the selling price of £9.95 is a little steep.

**2** Herbert's Dummy Run has been available for some time on the Spectrum original. Micro-Gem certainly seem to have got the hang of the Amstrad graphics, so the look of the game is very pleasing. I can't help feeling that if as much attention had been paid to the sound the game would have been a lot more pleasant. That really brings me to my biggest criticism. I really think it's time that we left this Wally domain, it is beginning to get very tired and well used. While I can appreciate that it is a new game to the Amstrad there are a number of other games which have been converted to the Amstrad that tend to leave the behind in terms of originality and content.

**3** Micro-Gem are taking the opportunity of exploiting individual characters in games which offer the same style of gameplay as the other Wally games. Of course there are a number of improvements, such as the real arcade sequ-

encing or a more original theme. The Wally family are beginning to get a little tired!

### Presentation 80%

Good game options but the box is very flimsy.

### Graphics 88%

Quality of content and neat scrolling effects. The graphics do a great deal for the game.

### Sound 58%

Much could have been done in this department to make the game more complete.

### Playability 77%

If you miss the best type of arcade adventure then you will fall for this.

### Additive qualities 76%

The content and the graphics together with the attractive look should keep you guessing for hours.

### Value For Money 87%

Sam provides a little cheap but it will be worth every penny to the Wally fans.

### Overall 83%

The graphics are well up to standard and obvious enjoyment but age is beginning to show.

## BOUNTY BOB

US Gold, \$9.95 case,  
£14.95 disk

Author: Bill Hogue and  
Curtis Mikoyalski

When the world's historians begin to research the history of computer games they will settle on *Bounty Bob* with some interest. *Bounty Bob* has a long and distinguished lineage: the game is related to *Blaxx* (1987), the first ever platform game, originally written for the Atari

jump, leap straight up in the air and wait until Bob's almost at the peak of his travel before pressing the left or right key. To make a long jump, press the direction key as soon as you pass jump.

Over the mine's long history many objects have been abandoned within it, all of them are now compensated by the value-rich but Bob can use them to his advantage. When in possession of an object the mutants want to keep away as they turn into not-so-mutty creatures and hope Bob will ignore them. To mutate mutants you need to collect one of the items littered about the mines, all of them mysterious things like radios, coffee pots

and so on, allowing you to jump huge gaps between platforms. Very handy indeed!

To succeed, slides connect some platforms, but before you descend to a lower platform, take a good look at what's below you — sometimes there's a lampshade mutant at the bottom, and it doesn't do you much good landing on it if it's flashing!

## CRITICISM

**4** *Bounty Bob* is an advanced platform game with realistic wandering about. The enemy can only be killed by Bob for short periods which makes the game pretty

touches like the excellent high score table and the animated birds flying the life letters onto the screen make the original version the classic game it was for a while there. Admirably goalless, features the whole thing seems a bit lack lustre. Still, I'm sure many an Amstrad owner will enjoy *Bounty Bob* for its entertaining gameplay although it does seem a little bit over-priced at the ten-pound mark.

**3** I found the character a bit too blocky and the sound too 'buzzy' to be really satisfying or 'exciting'. However, the game itself is one to make you want quite hard especially in getting those 'perfect jumps off yet'. Fortunately the control method of short and long jumps makes this possible with some practice. In general I wasn't 'hooked' into it by *Bounty Bob*, especially considering *Blaxx* is what I would have fancy for it, but putting finance aside, it represents an interesting platformer that's well worth a look before shelling out or not.

## Presentation 42%

Below average for the game of its price with few extras and a blocky look.

## Graphics 55%

Looks colorful enough but few extra effects and Bob is a bit too blocky.

## Sound 55%

Although the spot FX are quite good they tend to get a bit wearing.

## Playability 74%

The game will keep many inspired ideas on there if it's a bit too.

## Addictive qualities 77%

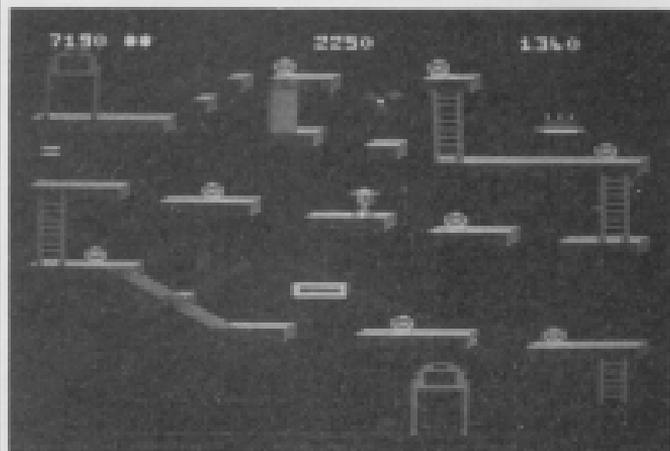

The 'what's around the corner' syndrome will keep you at it all the better end.

## Value For Money 48%

It's not on the Amstrad list but seems to be quite a bit. This would have been better priced at least a pound less.

## Overall 65%

Doesn't quite live up to its reputation but it's still quite special.

and Commodore 64. It was from that game that the now legendary *Blaxx* Mine was developed. If you aren't familiar with *Blaxx* or then a quick history may tell you in the picture.

*Blaxx* (1987) is set in the mine of Nulon 'Yohan, an evil mine who has dumped radioactive stuff into the caverns and turned all the little hairy creatures who shared their land there into mutants, manhandling mutants. The idea is to enter the caves, steal all the radioactive stuff while dodging the mutants and escape. *Bounty Bob* is set in the same mine but this time the task is to steal various sections of hardware, or platforms. The sides of the platforms are shaded but as you pass Bob over them the shading clears so you can see where you've been — a bit like a 'Painter'. Each screen has a time limit.

Control, although being for a standard left/right up/down buttons and jump game, has a novel touch — a variable jumping distance. To make a short

and sometimes, and this adds points to your score. The mutants turn green when you pick an object up, and then die when you run into one. After a while they flash a couple of times and return to their normal, deadly selves. There are usually quite a few objects littered about the screen, but they have to be used quite sparingly since getting from one mutant to another usually takes a while.

If you lose a life on a screen you are reincarnated, as are the objects — but the mutants you managed to kill stay dead. And you don't have to rewalk the parts of the platform you covered before meeting your end, which makes life that bit easier.

On some screens there are objects to help you travel to the more inaccessible platforms. These vary from conventional lifts to the more exotic master transformations (egns that teletransport you to another screen). Lots of the 'lured' energy food bars — eating one speeds you up and jumping power is increased by a factor of

inspiring when you catch up with one only to discover that the substitute time is over. The game can be fairly complicated to control since the joystick option still requires some practise to be fully controlled from the keyboard. Graphics are effective but blocky and the colours tend to be a little garish which makes some screens a little unclear. The sound is good but after a while it becomes monotonous and lacks meaning for the volume control. It's not too bad when the 'exciting music' comes into the game, I never heard any. The game is quite addictive and the later screens really are difficult and this game still has a lot that is novel and interesting.

**2** After playing many a game of this class on the Am I was initially quite impressed with the similarity between the two versions. After awhile I began to notice the certain little details lacking on the Amstrad conversion. Little

# CREATE YOUR OWN GRAPHIC ADVENTURES

The Graphic Adventure Creator - The easiest, most powerful graphics and text adventure generator. There's no coding or graphics to master - it's so easy to use it's amazing for the price.

WITH THE MOST POWERFUL FLEXIBLE AND EASY TO USE UTILITY EVER.....

Creating Graphics and more than 1000 graphics quickly and easily with The Graphic Adventure Creator. The many features include: text painting, shading, scrolling, and more. Simple, fast.

Full shading, clip to view routine, easy editing and professional size fonts functions.

Another powerful feature is the ability to merge pictures, making one with and more.

When GAC makes a new scene for all the GAC different worlds, maps and worlds, the ability to make a new individual character (height, sex, etc).

Installation with printing and saving. GAC displays a screen showing current status of the installation with printing and saving. The installation of software, with the use of 250 software disk 1.44 capacity, large and the printer you need. High compatibility, large and the printer you need conditions, appear prior than this.

The Graphic Adventure Creator (GAC) for the Amstrad CPC range of computers, has been specifically developed to enable TBU to produce fast, compact adventure games with the minimum effort and the maximum of creativity.

**COMPREHENSIVE INTELLIGENT COMMAND INTERPRETER**  
Handling complex sentences and multiple command lines, the user is not restricted (unlike others) to 2 word logic. "I" detection is also included.

eg. "Take the box and open it carefully. Examine the other items then put it in the box" is a perfectly valid input.

**EXTENSIVE TEXT COMPRESSION**

This allows you to create far more detailed and more extensive location descriptions to improve the playability of your adventures. With a full function editor, GAC handles automatic word formatting, a logical command interpreter and ultra-reliable logical sequencing. GAC will recognise and distinguish ANY word eg. Alive/Alive, Screen/Scenes, Travel/Treppers etc. etc.

All Adventures created using GAC will run totally independently on any Amstrad computer without the need for GAC to be present in memory.

GAC incorporates the Laserlib system.

## £ MAKE MONEY £

We are urgently looking for atmospheric, original, humorous and imaginative graphic adventures written with GAC with a view to publishing your adventures for you.

We'll fit the package ourselves. Authors! You can make money in the computer adventure market through our company without any payment or regular advertisement cost for themselves.

The Graphic Adventure Creator for the Amstrad CPC Computer range is complete with an interactive and friendly manual, the basic start file and a free example adventure - Adventure! GAC retails at £55.95 on cassette and £24.95 on disk and is available from leading multiple and independent retailers all by our fast mail order service (3 or 4 class post free).

Unleash your imagination with The Graphic Adventure Creator

# CAULDRON

Palace Software, \$8.99, case, joystick only  
Author: Richard Laineftner and Steve Brown

Halloween is a witch's busy time, especially so for those witches who seek the position of Queen witch. It is written that the Queen witch shall be the one who possesses the Golden Broomstick. But such power does not fall to the weak; it must be snatched from the lap of the pumpkin and to defeat the pumpkin a spell must be cast — a spell made from six ingredients.

Your task is to gather the ingredients and brew them up in the cauldron in your cottage. You know the part of being: juice of bat, eye of newt, wing of bat and so on. Each ingredient can be found deep within one of five

laverns, places to which is barred by five locked-doors. The Hag must recruit her broomstick and set off in search of keys. Her journey will take her over many landscapes, each one with its own hazards. The woods are beset with bats; the graveyard's graving with ghosts; the sea's warning with seaquils and the mountains and valleys threaten her with Hag-eating plants and singing fireballs. But traps and snares await, but the Hag is not too concerned, so long as she is protected by her magic.

You begin the game with nine Hags, and they start their journey with a magic level of 99 percent. Once contact with one

of the hazards rapidly depletes a Hag's magic level until she is done for. The Hag must avoid the hazards, or blast them with her magic spell, which turns her broomstick into a cannon and casts a little magic power.

The Hag must look out for the randomly located keys on the ground while she flies around the terrain. When she spots a key, the Hag must find a safe place to land — often this means flying to another screen and waiting back to collect a key. The Witch is at her most vulnerable while she is on foot, so the shooting spell only works while she's airborne for broomstick. If she's lucky, the Hag might find a magic recharge spot on the ground, which restores her magic and so extends her life.

SCORE  
0000675  
MAGIC  
35%

HAGS

She can only carry one key at a time and must make straight for a door, any door, once she's collected one. If a door opens when the Hag loses a key, (like that key is tied to her. If she collects it, and allows the door to shut, the Hag will have to use another key to reopen it, and that could leave her short.

The layout of the caverns differs, but they all demand great skill in reaching the highest points, in some cases can be done at all, grunting screams away from the door. You will find yourself jumping from ledge to ledge while trying to avoid a host of snakes. Should you manage to collect an ingredient then it's out and back to the cottage to add it to the cauldron before continuing the hunt for the rest of the recipe.

## CRITICISM

**1** I am very impressed by the graphics and audio. Not in this game except in one small regard, when the Hag walks or flies past other objects such as trees or mushrooms she appears to suffer from attribute problems. A minor niggle because the graphics, overall, are a joy. Some of the effects within the cavern are very clever. In one of the caverns the rock ledges are shaded partly in red, giving the impression that there is a great glowing fire, far below. Flicking from screen to screen tends not to be as effective as scrolling — not in this case. It all happens so fast that one barely notices the change. One last point — this is a very hard game to play. It will take a great deal of trial and a lot of patience to complete.

**2** Children's graphics are fantastic, among the best I have seen on the Amiga! There are six many red and silver leathers, like the only the old girl's fresh bags or silver tails, or the flashing eyes in the skull encountered in one of the caverns. My only complaint is that the game is very difficult, almost too difficult. The problems begin in the caverns which demand not so much the skill of an adventurer but more that of a suicidal arcade player with the will and determination to experiment. You means wherever you go from one screen to another they can only be discovered by trial and error. I spent many hours concentrating on learning the route through just two caverns. The task is made more difficult by the way the game

flips from one page to another. While you are on the edge of one screen you have no idea of what to expect on the next, should you jump or should you wait? Either way you are going to lose a lot of Hags. Finding out Cauldron is a huge challenge but it is a varied one with graphics that make it enjoyable.

**3** Palace Software's Cauldron moves the well-trodden recipe of plot, lore and shoot 'em up, and what is served to you is a game that gives a starter, main course and a desert, yet leaves you hungry for more. The graphics move amazingly whilst sticking from page to page as you traverse the caverns. Once you have gone underground things get more difficult. Having to leap over way up and down labyrinthine subdivisions, passages (looking at where you stand in front of the next screen at the cost of shifting one of your view frigs against something fast, in a costly business. I'd have preferred something stronger. Four such skills includes Cauldron's music, puzzle, and intelligent game that has converted well to the Amiga!

## Presentation 84%

Very little in the way of instructions and keyboard play not provided for.

## Graphics 95%

Remarkable animation made all the more effectively very clever use of colour.

## Sound 73%

While the tune at the start of the game was noticeably more heard would have been welcomed during the game.

## Playability 82%

A demanding game which requires a range of skills and helps to be solved.

## Additive qualities 90%

Because the graphics and animation are so good you will find your self wanting to resist trying to find what's around the corner.

## Value For Money 85%

An ordinary price for a magical game.

## Overall 82%

Sure to hold you spellbound.

# QUICKSILVA

## FIGHTING WARRIOR

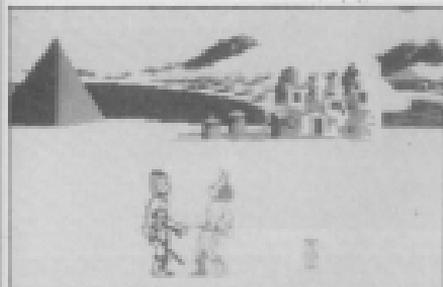

Melbourne House, \$9.95  
cas  
Author: Studio B

Melbourne House have released their follow up to the highly successful *Expanding War* in the form of *Fighting Warrior*. Although this latest game continues the trend in combat games it differs from *Expanding War* in that *Fighting Warrior* follows a story.

Set in ancient Egypt the story revolves around the two separated lovers. The hero's lover,

strikes, top, mid and bottom strikes. Attacking/movements require the use of the joystick to be made down, with a released, your character goes into defensive mode, used not only against your attacker but also against other dangers including stray arrows that come flying into view from off screen. A Douglas Flamingo has a jet pack a player can duck should be useful to avoid avoidance.

The different bosses to be fought vary quite a bit, but mostly they are humanoid with weird heads, equipped with the

Thaya, has been kidnapped by an evil Pharaoh who has locked her away in a remote temple. Unfortunately locked at the Pharaoh's side, the fighting warrior decides to set out and rescue his beloved from her captor. Armed only with a sword, our hero must face the hazards of the desert which is plagued with mythological demons and demigods. These creatures are set upon defending their territory, proved by the bones of previous trespassers. Apart from their bones the desert beast's previous victims have also left behind a number of pot-like objects, rumored to possess magical powers. The pots may be collected by giving them a good whack with your sword, though it's not guaranteed the effort will be successful.

A scrolling backdrop with the warrior and his opponent is displayed on screen. As the warrior progresses, the backdrop scrolls down or later leaves a chance upon a set with whom he must do battle. Both the foe and the warrior have a limited amount of energy. The energy is shown underneath the fighters as a row of arrows. For each blow suffered, the victim loses a portion of power. Below the energy reaches critical point at which stage the losing fighter starts to flash periodically, if you lose all of your energy during a fight the game is lost. When it comes to fighting there are three offensive

same type of sword as yourself and utilized in a similar manner. A rusty sword avoiding, if you can help it, is the great big dragon thing. Though unusual he does a pretty like in body looks, hitting back is not so easy as it looks. Instead try swinging his wings around him. As expected the attackers get harder as the screens progress, different opponents using different tactics.

In the full set of reviews are mentioned their own last problem is a combination with the Pharaoh's victims. If there are beaten the process is free. Full set's own review is free.

### CRITICISM

**A**lso Melbourne House's big hit with the story of the *Expanding War*. It looks like they want to carry on with the sword and shield set up. Though a little bit just like their *Expanding War*, *Fighting Warrior* just doesn't have the speed of its predecessor. Though beautifully animated, the range of control you have over the warrior is rather limited. The game is quite easy as well, by just holding the fire button and pulling down I progressed quite a way. I'm afraid that despite the clever graphics and pleasant presentation *Fighting Warrior* just doesn't quite make the grade.

**2** When I saw the loading screen for *Fighting Warrior* I thought it was going to be mega-epic, and after presentation was completed, the backgrounds are really colorful with good use of colour modes and above average shading effects. After all this I was expecting a fabulous game — but alas not! The characters themselves are very similar to the Spectrum version but the gameplay is far less slow. The continuous love all the way through the game is very annoying and the sound effects on hitting a block sounds like someone has displaced the sound of squashed tomatoes and stuck that in. When you hit an opponent two character blocks of red and black pixels appear on the place of impact, which is very amusing coming from Melbourne House. *Fighting Warrior* turns out to be a rather competent to its Big Daddy *War* and a lot less exciting.

**3** I know it would never be easy to follow *Expanding War* but I had expected something a little more dramatic in the fighting department. Instead we are presented with a story line offering more in the way of gameplay. The task is to rescue the Princess and unless you can rescue your favourite time (myself) and my very attractive and the winner in this game is most welcome.

But the bottom line is that this is a fighting game and the fighting is its greatest failure. The action is too restricted and movement slow. The comparison is between *Survival* — a console game like *War* or a more exciting, entertaining game, but with simpler fight sequences. *Fighting Warrior* may hold your attention for a little longer.

- Presentation 85%**  
Bosses quite a few options and an attractive loading screen.
- Graphics 85%**  
Very impressive featuring real-time movement of a lot of views.
- Sound 72%**  
Well executed tune but with sound effects.
- Playability 68%**  
Maybe a little unbalanced but sound to give you a hard time.
- Additive qualities 62%**  
The variation in background and character helps but the action can become repetitive.
- Value for money 62%**  
Average price for a fighting game offering game.
- Overall 74%**  
An average addition to the list but may still provide some entertainment.

## MATCH POINT

Psion, £7.95 cas.  
Author: D and L Research

*Psion* are normally associated with chess programs and the QL computers, but they have introduced a wide range of sports games, one of the best known of which is *Match Point*, their tennis simulation.

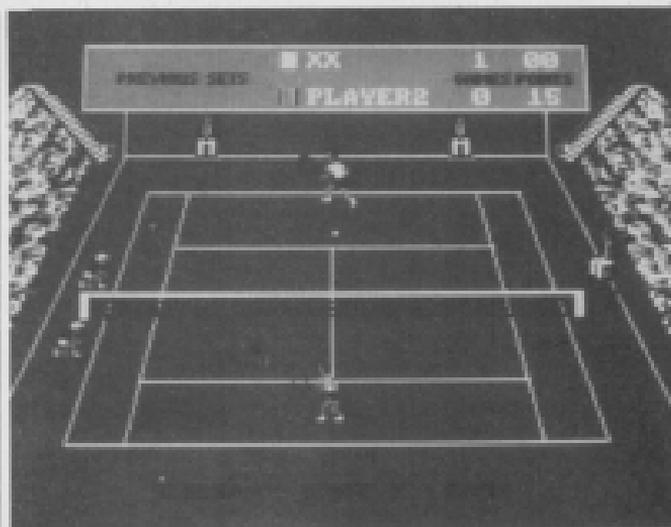

The grass is green, the net is tall and the ball boys are ready for the ball. The players sign on, either man man against themselves or man versus man. You can start in the semi-finals or leap straight into the big match itself. If you are up to it, *Match Point* observes the same rules as those used for lawn tennis and will in case you aren't familiar with them, a brief synopsis has been included with the game instructions.

Hitting a ball gently to and over the net would be a very easy way to play tennis. The object is to hit the ball such a way that your opponent is unable to return it to your side of the court — in this, it is just like real tennis! To achieve this the player must be allowed a reasonable degree of influence over the speed and direction of a

shot. The *Match Point* tennis player alters the speed of the shot by utilizing the speed at which he moves into the ball. The direction of the shot depends at which point in the arc of the racket's swing the ball is struck.

Although *Match Point* allows you to change from backhand to forehand at will, the match can be made automatically by the program, or by the appropriate key. The computer is the player for the serve it also automatically, pressing the serve the ball. If a ball is "out" or a "let" is called then a beep sounds and a message appears at the bottom of the screen announcing the situation. A decision when a ball collides with the net then, true to life, one of the ball boys dashes out and picks it up.

All at the far end of the court, the old *Match Point* away from Harry Casperley, with the score board, the main game is scored the *Psion* is updated Wimbledon style. At the end of a game or set the crowd, who aren't in the best position, cheer as the players swim over to the arena's high chain. No words are spoken — just one captured in *Psion*. The players about turn

and continue the match.

As for the ability to select two player mode or one player against itself, the latter you can set for a demonstration game at any one of the three levels. It's very much like watching a real tennis match. The only thing missing is the commentary, but you could always provide your own.

choosing the two players on. As a game to play it offers hours of challenging fun. I like the way the computer makes the occasional mistake. I thought the way the little players closed off court and straight back again at the end of a game was a little bit odd. Also it would have been a lot better if you were able to control the serve.

**3** Match Point on the Spectrum is still one of my favourite games and

when Big Jan gave me the Amstrad version I quickly hurried off and loaded it up. On loading I was presented with some great graphics with a title ball jumping looking over the proceedings. The characters appeared on screen, one adorned in a blue striped shirt. On playing the game I soon realised that the great graphics and real touches made up for the average gameplay compared with the real-life floppy version. Although compared to any other Amstrad ball sport

simulation it's fantastic and would beat Centre Court any day. If you're a fan of it tennis, better than I would certainly recommend this 'cos it's better and a pound cheaper than Amstrad's effort.

#### Presentation 84%

Options for keyboard or joystick as well as three levels of play and lots of nice touches.

#### Graphics 82%

The choice of colours and design of the characters makes for an attractive game.

#### Sound 66%

Real crowd sounds but annoying beeps.

#### Playability 78%

Great fun to play despite a few unrealistic control problems.

#### Additive qualities 77%

Does a nice impressive of the skills you really don't have!

#### Value For Money 63%

A well thought game for a good price.

#### Overall 79%

A mighty match for most a match Machine.

## CRITICISM

**1** Tennis is not an easy game to simulate, it's very hard to capture the 'feel' of the game. But I am very impressed with Match Point. The characters are well defined and very well animated. The different options give the game a lot of flexibility, the level inexperienced will cope with the real tennis while the fiends are very challenging indeed. The movement of the ball is excellent. I particularly enjoyed the way it bounces off the net, the only thing that annoyed me was the wretched bleping whenever the ball was out. I had to turn the volume off in the end and rely on messages at the bottom of the screen. It soon became apparent as a tennis fan that you get this.

**2** I have a tendency to steer away from sports games but I really enjoyed playing this. It's really a great fun just to let it up into tennis mode and watch. An ideal way to enjoy out of season tennis especially if you have a couple of friends

# ASSAULT ON PORT STANLEY

Amstrad, £8.95 cassette  
Author: Edgar Beika

Assault on Port Stanley is a three-stage shoot 'em up set, with colourful oblique perspective, around the Falklands capital. The game begins with the words 'Approaching enemy base' and before you know it — there on the horizon is an enemy ship.

During this initial stage two guns mounted on your ship's bow are your only weapons — you can just see the bow peering into the lower part of the screen. As the enemy ship approaches open fire. Gun direction is fixed, so you cannot adjust the range but you can move the entire ship left and right through jet forwards or backwards. Enemy ships must be

object is to reach an island but you can only fly as far as fuel supply allows. The fuel imposes a bit of a restriction — the longer you keep the ship the sooner you can stop being blown up by the enemy, but if you leave too soon there you could end up falling out of the sky as your engine sputters through lack of fuel.

Once airborne you must steer the chopper left and right — space invader style — to avoid the onslaught of enemy aircraft and their missiles. You can shoot back and every enemy plane steered game you hit counts.

If you survive the enemy aircraft and your fuel holds out then you enter the channel, the last stage of the game. At this point you must attack enemy ships and Barrage balloons while flying down a narrow river

ahead of your position to be destroyed by hitting down three times, dropping you 200 points for each one. It's all very well lobbing shells at the enemy but you must be accurate and expect them to send a few back. Your guns have a slightly longer range than those. This means that you will be able to get at least one 'blast' shot off before they return fire. The enemy guns are pretty good, they rarely miss and every hit destroys a sizeable percentage of your ship. The only way to avoid the enemy shells is to take out of range. Difficult when you are among the enemy fleet with five or six ships breathing down your propeller shafts.

At any stage during the naval engagement you can launch a helicopter from under the second stage of the game. The

# ASSAULT ON FORT STANLEY

**Presentation 20%**  
There are few cut-scenes and the only definition of a full-screening screen.

**Graphics 17%**  
Only two screens are any good, the battleship equipping and the assault in part 1.

**Sound 35%**  
The battleship and shell effects are not bad but become tedious.

**Playability 32%**  
Just tell anything that moves that can't be destroyed to good being hit by the enemy ships.

**Addictive qualities 18%**  
You are bound to stick around to discover if the end is as bad as the start.

**Value For Money 52%**  
A ridiculous price for a game that wouldn't rate as budget software.

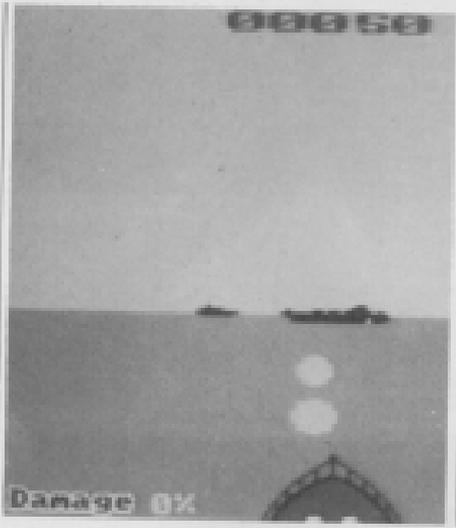

**Overall 12%**  
No comment.

channel. If you collide with the hulls or any enemy (and your battleship will be destroyed). You are still suffering from the fuel problem but in this stage it's possible to re-fuel. Along the water's edge there are some logs together with a landing strip to refuel you quite the battleship, land and collect some logs. If you manage to reach the end of the channel you are awarded bonus points for every man collected.  
Control keys: joystick only

## CRITICISM

**1** I spent my time waiting for the first enemy ship to come into range wondering just what it is that lets this game with the Falklands war. I concluded that the only link was war itself. After all there was no ship to ship engagement in that conflict, battleships were not used systematically to shoot down the Argentinian air force and finally the British did not use battleships. To track out Argentinian ships led up in a narrow channel protected by barrage balloons. What a stupid idea. After playing the game I soon realised that the only way this game could be marketed was by playing it in a slightly controversial arena, it's required before an why not now? The game itself is utter rubbish. Why can't you control the range of your guns, to make it a little more interesting? How is it that the only way of moving out of the range of the Argentinian guns is by moving left or right until you can't see the ship any more. That suggests that the Argentinians were as stupid as the Big Britain fleet of 1914, who could be needed if one several men eyes on the principle that the best thought that if you couldn't see it, then it couldn't see you. Also, I didn't know that the Argentinians flew planes, because that's what the ally aircraft on the second stage look like.

**2** If Assault On Fort Stanley took a year to create it then it could be accused as being written under fire. The game is so complicated when there was to be simplicity. I can only say that the title is a product of marketing. I'm surprised they haven't included a high score competition along the lines of 'Kill an Argie/Win a Middy' allowing to run a blockade of ships as you approach the island which is the best of the screens, but it doesn't run out and buy a tin hat yet! The only way to avoid enemy shooting is to keep the ships off your screen, a case of out of sight, out of range. A similar method is adopted for the Argentinian planes which

happens you as you near the island. You cannot fire against them, so you avoid damage by confirming them. With ships that fast it's a wonder the enemy don't just surrender at the start of the game. It's a pity they don't and save you the trouble of ploughing through the rest of it. I personally will find the white flag now and just say the game is not worth the money it's used, and certainly cannot justify the price tag of £8.95.

**3** The Falklands war involved a lot of ships of the air and war battleships so it's also surprising on that that the game reflects nothing of this. The game itself is pretty slow, the planes are too slow to be a threat to the ships, where you have a much slower screen change. Enemy planes crash down into the top of the screen in unconvincing fountains and fire rather randomly at vessels in a predictable. Once past the planes you enter the channel. This is populated with barrage balloons that move backwards and forwards and will move ships. You can fire at both of them but beyond that the ships as you collide with them — it's a half-collision? The whole game is completely unimpressive and I think it's fair to say I don't have to play this again.

## A POWERFUL DATABASE FOR THE PRICE OF A GAME?

# KWIKFILE

A top price database, designed for fast and easy manipulation of

- Fully menu driven
- Up to 18 fields per record

## STAR FIREBIRDS

Insight, £7.95 case

Star Firebirds is a version of an obscure arcade game dating the rounds a few years now. As you may expect it has a similar scenario to arcade games of that period. You go left, right and fire. Actually the game is quite originaly spacialized when game designers where starting to add original features to the old classic, it's a warp button. If you're interested in the war-

Since you're the nearest neighbor that start on you. The birds attack in waves of five, comprising mainly eagles and gulls. Also prone to drop down on you are some large bombs. Their explosion should they reach the bottom of the screen, it tends to blow the ship in another direction.

Using the laser cannon, the bomb can be blasted while it's still high up and thus resulting shrapnel from the explosion-

fare it runs as follows. You have 100000 points to the outer reaches of the screen to do battle with the legendary Firebirds. The Firebirds aren't very nice at all and are intent on the destruction of all the human species.

should be easier to design. Also making an occasional appearance are the Emperor Birds which, because of their imperial standing, have to be blasted many times before they finally give up and die.

If your ship gets into a tight area and it looks like curtains for certain, then breathing gently on the space bar should put the ship into warp making it invulnerable to any attack. Warp also activates the 'oomph' rockets and propels you up the screen, still able to move left and right if it's possible to use the ship as a saw by launching into the attacking Firebirds and, as you can still fire as well, a fair bit of destruction is possible when using warp. If you don't use the  $\bar{w}$  then it's possible that the engines will fire by itself due to the energy build up in the crystals.

The ship cannon is state-of-the-art stuff in a quadruple channel cannon, which actually means you can have four shots in the air at any one time. Control keys: (A) left, right, left square bracket for fire and space for warp.

## CRITICISM

If I'd really thought that the time of this game had been passed, even for a title (very new machine like the Amstrad) it really is very dull indeed. Why Insight have decided to convert this from the Spectrum version I know. The graphics aren't so bad and feel of the game

are so ancient. There is some limited re-arranged appeal but not £7.95 worth. Insight should concentrate on converting their excellent Falcon to Amstrad for the Amstrad Firebirds is well worth clearing clear of.

2 After seeing the Spectrum version I was looking forward to a great translation on the Amstrad but unfortunately it is just not up to the same standard. Bugs were found in quite a few places such as when you die you can fire for a few microseconds after you've been hit — but to compensate for this you may be killed by aliens that are a few pixels away from you. The sound is well up to the Amstrad standard and gives some very painful states when you kill something. The colour and sound are fine, but the gameplay is not good enough.

3 I am afraid that this game has turned out to be something of a cheap imitation to me. I had expected some really smart graphics (being that bit of great classic) but not. The game doesn't have quite the maximum colour with the result that the aliens are big and very chunky. Gaudy even. As far as the gameplay is concerned I think there are a lot of people who would enjoy such a fast action shooter on an old PC. I really is wondering that the graphics don't contribute to the game's playability. On the plus side I thought the sound had been affected very well though that's a little compensation for a generally dull game.

## Presentation 42%

Big eyes to read letters but there is no background music system that has to be accessed every time you play.

## Graphics 48%

Colour, chunky and messy. The movement isn't too hot either.

## Sound 58%

Music and sounds as appropriate but nothing stunning.

## Playability 55%

Extremely playable because of its simplicity but not much fun.

## Addictive qualities 38%

Despite slight initial appeal it is easy to get tired of the constant repetition of action.

## Value for money 21%

It was an absolute waste of words and that Point-Over was received (not at eight quid) it just isn't worth it.

## Overall 32%

There's a little chance someone will blame me for it, but it's a very slow shaver indeed.

# BRUCE LEE

US Gold, £9.98 case  
Author: Timedate Ltd

Bruce Lee is, as you might well expect, a game starring the Martial Art Master—Bruce Lee. Playing the part of the world's most famous fighting man, you have to guide Bruce to fame, fortune and eternal life. The trouble is, the guy who possesses all this infinite wealth and the secret of immortality is a powerful wizard. Naturally, the wizard is loathe to let anyone steal his prized possessions, which he has stashed away in his large mansion. Being a naturally cautious chap, he's instructed his many minions to attack and kill any intruders found lurking within the many rooms and

There are two different types

your passage through them must be difficult indeed. Exploding flying fi and the deadly part fights should be avoided unless there's a suicidal streak in you.

On the edge of the screen and the next one flicks into view, Bruce is represented as a screen and is controllable from joystick or keys. Apart from the fighting moves, Bruce's repertoire of movements include running, jumping and sliding. Climbing comes in handy for quick escapes via the large number of vines growing around the mansion. When it comes to a fight our hero is well equipped with a powerful chop kick and a chin slapping punch. Bruce is a fairly tough character—he can

of attacks employed by the wizard. More deadly than he is the green Yama, a portly green assailant looking like a fat version of The Hulk in a kimono. The Yama will take three minutes to kill before he gives up. A couple of hits or a well placed punch should tell the other nasty you'll meet the black clad Ninja. Withdrawing a hidden stick, the Ninja is slightly easier to knock out than his fat friend, also placed to hinder your way are a set of locked doors that can only be unlocked by collecting a number of lanterns. Natural hazards and obstacles are also fairly prolific throughout the mansion. Electric charges zap between various points and

take four or five liftings from either the Yama or the Ninja before taking a fall, and he can take five falls before scoring and causing you to start a new game.

The game commences outside the wizard's lair and to get in, Bruce has to collect the lanterns placed throughout the adjacent screens of the gardens. Once this is achieved, a small door slides back on the first screen and you're into the mansion's park. There are thirteen screens, each usually containing some sort of obstacle to be passed. Once you've completed all there is to complete, the Wizard appears and a short battle to the death takes place. Win

this, and wealth and eternal life is yours. Ahh, what a nice ending.

Control/keys: Joystick.

## CRITICISM

Unfortunately a bit wary after US Gold's previous conversions, I didn't expect great things from the Bruce Lee conversion. Luckily my preconceptions were totally unfounded and I'd rate Bruce Lee as one of the best games on the Amstrad to date. The graphics, though of a simple style, are very effective and are identical to the Commodore

fore version. As with other implementations of this game, its main appeal is the superior playability. This game is a real favorite for me, and I hope it is done as well as it deserves.

**2** There are other games available, with more screens — and that could give you the impression that you're getting a lot for your money. However, Bruce Lee possesses a quality rarely found in this type of game. It has style, atmosphere, and superb playability. Some of the characters are wonderfully designed and the graphics are really original. I've seen this game on a live machine and became instantly addicted. This version is the best I've encountered to date and I imagine spending many more all night playing sessions on your game. Don't hang around — just buy it.

**3** Bruce Lee is my personal favorite — an absolute machine. Now it's come to the attention I'm well impressed. Obviously the game isn't anything special but what's there is adequate and effective. It's also very close to the original and if for anyone the game could apply be mistaken as being a Commodore one. The sound is in a jar with the graphics there's an authentic life screen tone and some appropriate tone effects. Visuals for the game is more fun to play than to watch and wouldn't look amiss in my self respecting Amstrad owner's software library.

**Presentation 93%**

Great two player mode and neat title screen and generally above average.

**Graphics 88%**

Though a bit blocky, the use of colour and movement is exceptional.

**Sound 79%**

A bit sparse but what I did hear was good.

**Playability 94%**

The simple but imaginative gameplay makes for a good buy.

**Addictive qualities 95%**

Even when solved you will find yourself reaching for another game.

**Value for money 89%**

A bit dear at nearly £30, but generally worth the extra expense.

**Overall 93%**

Should appeal to most gamers and is a definite classic. Definitely deserves to be a hit.

## GEOFF CAPES STRONG MAN

Martech, £8.95 each

Unlike some sports simulations Geoff Capes Strong Man requires more than mere joystick wiggling. The game begins with a 30-second session, the outcome of which governs your performance for the six events. The task for this session is to build Geoff's strength up as much as you can. At the bottom of the screen you see an empty bar graph. You have to wiggle the joystick like crazy for a few seconds to get the red bar as far up the scale as possible. You can wiggle out, and accept the default strength, but it's not that much.

Every event begins with a rest period, when you stare out the strength you have built up. The strength shown on the main bar-

charting, making it much more than a 'look-much-punditism-can-you-give-your-pretor-games' The 2 and 3 keys are used at the start of each event to reset a horizontal bar up and down on a scale from 0 to 100, indicating the effort Geoff is to put into the task in hand. The more effort Geoff puts into an event, the more quickly he can complete it, and the more difficult it is for you!

During the Lorry Pull, Barrel Lifting and Car Roll events, the eight muscle icons around the screen flash indicating the order in which the muscles are called upon as Geoff gets going. You must follow the order of the flashing icons by moving a yellow arrow over each icon in the sequence and pressing fire. If you manage to follow the

Geoff must load five barrels onto a truck within the time allowed. Wiggling the joystick moves him over to the barrel and it makes him pick it up. From here on, chase the icons until he reaches the truck, then press fire at the right moment and Geoff takes the barrel into the truck. Then it's back across the screen to collect the next barrel.

The Foreground Best event on a restricted period of wiggling, until all of the muscle icons flash red indicating that Geoff is ready. Hitting the fire button brings the hammer down with a vengeance. The quicker you see all flashing fire after the muscles have flashed red, the better Geoff does.

Sumo Wrestling is the last event, and the only event where Geoff is forced to take an opponent's position, face to face. The referee in the middle who guides his opponent out of the ring within the qualifying time. Pressing the fire button at the right moment gets Geoff to Geoff's last training loads ground.

Although Geoff is presented a score for the completion of each event, the aim is to complete all six. If he fails in any event, either because he was exhausted or because he failed to qualify, then a new game starts. Should Geoff escape from the events victorious you can have another training session and begin again, but this time the events are harder to complete than the first before. If you want to keep measure of your muscle power, then experiment to enter your name on the high score table.

### CRITICISM

The gameplay allowed Martech to use graphics that are suitable but could not be described as highly detailed and well animated. At first I found it very hard to get the hang of the controls and would have liked the simple but unadorned joystick wobble technique called for in other games. Nevertheless after some perseverance I managed to do quite well and found the game quite playable. The game did incorporate a little more skill and expertise than other simulations that I could mention. My only regret is that the designers didn't see fit to include an option which allowed you to practise each event before the real thing.

I am not a great fan of sports simulations so I really didn't load this game with any great degree of enthusiasm. However after playing for a while it appeared a shame to have to describe it as a sports game. The different events called for a wide range of skills, not just a fast hand/foot but some pretty nifty co-ordination

to boot. This is quite a challenging game to complete and I am sure that it'll provide endless hours of frustrating fun.

3.5/4 I say not quite a while to get the hang of the game and I am still having problems. The variety of methods used to control the strong man makes for a complicated task requiring quick reactions and some pretty nifty joystick work. At first the game appeared to be too slow and dull, and I suspect that that may have been until you get the feel of it. After you achieve a certain level of competence I think you will be well rewarded with a demand for and increasing game control keys/Cursor

### Presentation 64%

The key choice was a little restricted but most will use the joystick option

### Graphics 70%

Attractive and interesting graphics but the fog events is a little simplistic

### Sound 67%

Clearly audible and the opening music is a little more varied

### Playability 82%

Does measure this to a very impressive game

### Addictive qualities 78%

Sufficiently difficult to attract more play in each event but not too hard to beat

### Value For Money 79%

Above average cost for the price

### Overall 80%

This review for a original joystick and keyboard variant. Goodgame, no sweat

graph can be allocated to the eight body parts represented by icons around the edge of the screen. Moving the arrow over an icon, you build down fire until the desired amount of strength has been transferred onto a smaller bar graph contained within the icon. Repeat this process until all parts of the body are awarded some strength.

During an event, the rate at which a muscle's strength remains is depleted depends on the level of effort you selected at the start and how often that particular part of the body is used during the task. Care has to be taken in allocating strength resources, for if any part of the body is called upon during an event and found to have no strength, then Geoff collapses exhausted and you have to begin the game afresh.

During an event, the action is viewed on a central area of the screen, around which eight icons are grouped. The most novel feature of this game is the way in which joystick wiggling has been replaced with force

rather than the spin you selected. Pushes green. If you select an icon out of sequence then a flashes red. If you fall too far behind the sequence, Geoff reacts to a flash—and if you press up finally, you can rest until all the icons flash red, indicating that the sequence is about to start again. The speed at which the icons flash vary depends on the amount of effort you have selected—at 100 percent you don't blink, you are competing against the clock in all these events.

The Log Chop requires you to press the fire button with your second firing. After you travel to and fire across the screen, above a log. When fire is pressed it depicts and shows a lump out of the wood. Sections of wood take one step to cut through. Handwood needs less shape and length, brought off all three steps. The while it is set an easy section of log to attack, so you can cut through within the time limit.

Barrel Lifting uses both joystick wiggling and spin chess.

# SPY VS SPY

Beyond, 19.95, case  
Author: Michael Fox

The fans of these evil, black and white espionage films, featured in *RAM* magazine, have been handing their breaths for the launch of this game. Apart from madcap shuffluggery *Spy vs Spy* introduces two techniques which make this game stand out from the crowd. Memorization solves the mystery in the game. The two spies are in separate rooms these are shown as about the other, if the spies occupy the same room then the bottom half of the display frame leaving you to concentrate on the upper section. If you click to fire against another person instead of the computer's spy then *Stimuley* allows each player simultaneous and independent control of their respective spies.

The game is set within the confines of a foreign embassy. The two spies are battling to escape from the building but they both know that only the spy in possession of the secret briefcase, passport, money, key and plans has any hope of escaping the security forces. The one and only secret is set to leave as soon as the time limit has expired, as both spies are in danger of becoming long term guests of an unpleasant government.

Collecting objects is simple a matter of clicking from room to room and searching under furniture and pillows. To search behind a picture move your spy over to the picture until you hear a click and press fire. The picture moves and anything hidden is added to your inventory. The fire button also opens doors or picks up other non-secret objects a spy positioned in the appropriate place. It's easier to go for the briefcase first, because without it you can only carry one object at a time. If you manage to set a trap or pick up a counter trap then the item you pick up replaces of the object originally carried (items of inventory are re-loaded within the room you occupy). If you don't have the briefcase then the colour of action open is to hide objects by moving them to safe places and locking them when you discover the briefcase the other spy won't have noticed your hand. The briefcase holds all four secret items but should you be able to change upon acquisition then the case, with its contents, is hidden within the room of your demise, available for the enemy to search for analysis.

Since there is only one briefcase and one set of plans there is bound to be a degree of rivalry between the two spies. One spy

can dispose of another either by locking him to death in hand to hand combat or by setting a lethal trap. In this game death is not permanent, the victim floats helplessly and analysis out of the game for seven seconds of real time, losing 25 percent from his game score in the process. While the victim is away the victorious spy can combine with the secret.

Hand to hand combat begins as soon as the spies share a room. By using the joystick you can release a big pistol in an attempt to do some damage. About every well aimed thump are required to send him on his way. A more refined method of dispatch is via a device called a tranquilizer.

Each spy's translator is positioned alongside his screen. By using this device you can set five different types of trap, the sixth button is used to call up a map of the building to help you find your way about. Pressing the fire button activates the device and mouse selection operates the carrying a cursor over an icon. The only trap which can be set in any position is the time bomb, the others have to be set up in a particular way. These include buckets of water that must be positioned over a door, a spring that can be placed behind any object, except a door, as can the bomb; and a gun that must be placed and then the string led to a door. The cost to a spy in setting a trap is time, often as little as ten seconds for the gun. If you succeed in the game the other spy gets marked, splattered or blown up.

It would be wise to remember that once a trap is set it is just as much a danger to you as it is to your foe. All traps remain set until they go off or are disarmed.

All traps except the time bomb can be "de-fused" by a counter device. An illustration for installation is a door lock, useful as protection from the water bucket. A pair of scissors from the first aid cabinet takes care of the gun and string. A fire bucket can deal with the bomb while a pair of wire cutters come in handy if you have forgotten the spring trap. The only way of knowing which trap you have to deal with is by watching your enemy when he sets it, and of course by not forgetting which room it was set in. When you are satisfied that you've made it safe leave for the other spy, ensure that there isn't a vehicle around the corner!

The option screen allows you to select the size of the building, up to 36 rooms with a time limit of 24 minutes. You should also take the intelligence of the enemy spy, 1 being pretty easy to defeat in combat and not very clever, 5 being very smart indeed. A large building means that there are a number of different levels, all buildings are through holes in this case the map opens in every hallway. It tells you which rooms you have been in which rooms contain any of the necessary items, but you lose time and points for using it.

Once you are in possession of the briefcase with all four items inside, you can search for the door to the airfield. Once

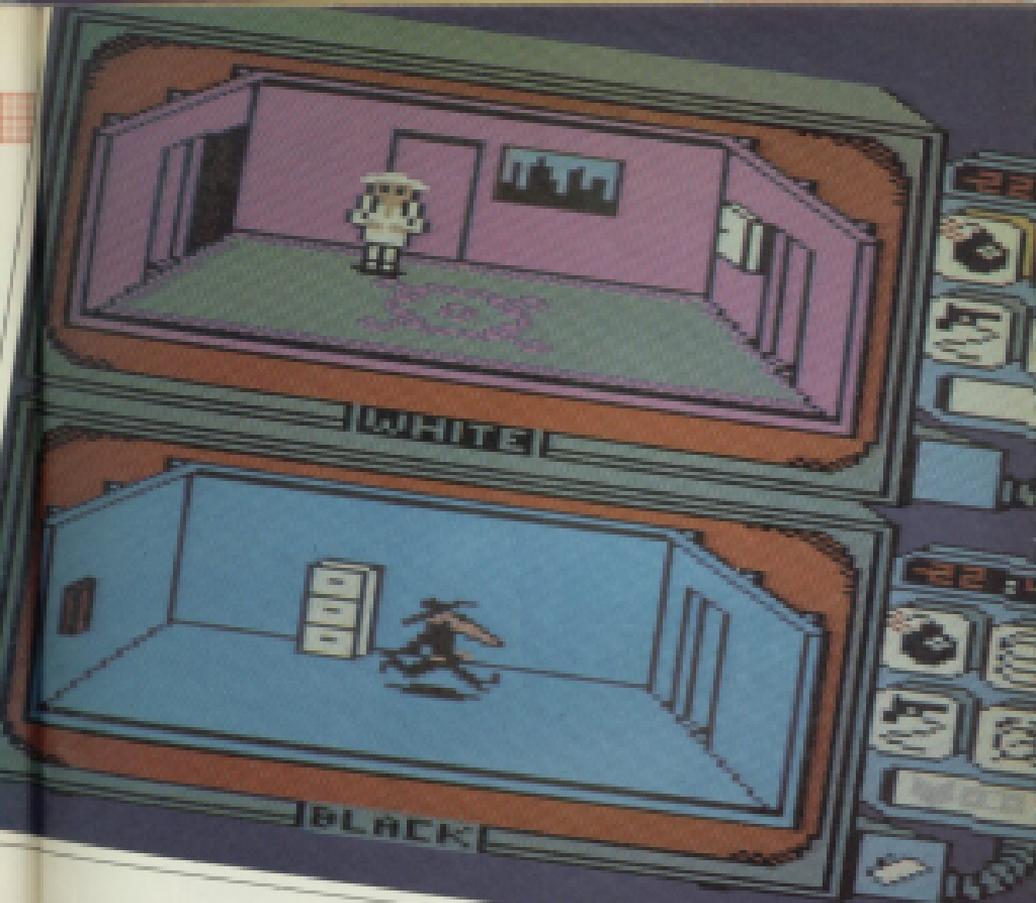

through, stop for a quick giggle and clank about your plans. The game ends with a rating which, more often than not is downright insulting, but that depends on just how close a spy you are.

## CRITICISM

**1** *Spy vs Spy* is wonderful. The graphics are a credit to the Amstrad and look more like the Commodore version than the Spectrum. I should think that for those that play spy is legendary. The idea of two players being able to play the same game at once may not be revolutionary, but it is executed so well. This is a more player game to test all two player games but even last player against a computer spy is a great challenge. It's just as well you can keep an eye on what the spy is up to. Getting the hang of collecting the goodies takes a little time but once mastered you can see about exploring the huge and very deep strategy that the game offers. *Spy vs Spy* should keep you enthralled for a very long time indeed.

**2** Beyond basic clone-a-subject job moving Sly the Rat into the *Atari* world except for two points. The other versions help the player back-track through the building by a system of "teleporters" which indicated the route he had taken. I also found that positioning the spy required a great deal of care. I suspect that the character control is lacking somewhat. To be fair though the gameplay is so strong and the overall polish so good that these few complaints hardly detract from the enormous fun that this game offers. Planting traps is great fun though not when you run into your own. To play this game you need an evil mind, a good strategy and no other commitments, you won't have time for anything else.

**3** Sly the Rat on the *Atari* is a great game. The game screen is very bright and colorful. The sound is superb with excellent use of spot effects for fighting sounds.

The huge range of options makes the game easy to get into and adds significantly to its addictiveness. Graphics are excellent, cartoon-like but somehow realistic at the same time, so it's always a delight to play, and the gameplay is marvellous. Sly the Rat is a very clever and funny game, you will love it. Buy it and you won't regret it.

**Presentation 91%**

You are offered a huge range of options which makes the game play very varied.

**Graphics 94%**

Colorful and quality graphics.

**Sound 87%**

The spy PR and much to the game.

**Playability 89%**

Little awkward to position your spy but otherwise excellent.

**Addictive qualities 93%**

Not allowing an Arader to play it would be more effective than pulling finger nails.

**Value For Money 83%**

It isn't cheap but it's worth the penny.

**Overall 94%**

Worth coming in from the cold for.

## BOUNTY BOB STRIKES BACK!

Twenty-five Levels

Plot C-based Plot

Real Japanese Capability

"Bounty Bob Strikes Back!" is the sequel to "Miner 2049er" which was a huge success on the Commodore 64 and Atari machines. Now on the Amstrad, this version features Bob's toughest challenge to date and he needs your help more than ever before to guide him through the mine. The mission objectives within have multiplied and over run the mine entirely, making it extremely difficult to survive the hazards of the underground passage.

OUT NOW

wings. Using high powered special equipment in the twenty-five caverns is Bob's only hope of achieving his objective of securing the mine and defeating the evil plans of Yukon Yutan.

## BEACH-HEAD

Multiscroll 3-D Arcade Action

A powerful island is being held by a ruthless dictator and his troops. As Chief Commander of land and sea forces in the Pacific, you must obtain a glorious victory and then invade the island with land forces. If your troops succeed in penetrating the island defence systems, the most difficult challenge will remain: capturing the enemy fortress of Khor Lin.

Beach-Head is a multiscroll action game which requires different skills and provides new equipment as you progress through the game.

# VOTE FOR THE BEST GAMES OF THE YEAR!

Another year is over, and in the time honoured press tradition, AMTIX offers you, the reader, the opportunity to vote for those games you feel deserve an accolade.

This is your chance to tell the software business what you think of their programs! Your voice will reach collectively out of these pages in the uniquely democratic manner that AMTIX has pioneered (well almost), and inform the world of the best Amstrad games for 1985.

What we have done is to think up 14 categories, and over the page there is a large form to remove from the magazine (or photocopy if you prefer). This should be filled in and sent back to us as fast as you can. Of course there's more to it than that! AMTIX is known to be not only democratic but generous to a fault — so the first 15 forms drawn from the bag on the closing date will earn their senders a voucher for £15 worth of software as well as an AMTIX T-shirt!

The results of the voting will be published in the March issue of AMTIX and the highly valuable certificates of accolade will be awarded soon after to the winning companies.

Get to it!

Get a  
**256K SILICON DISK DRIVE — LIGHT PEN ROM —  
SPEECH SYNTHESIZER ROM !!**

The Choice is yours with these great prizes from  
**DK'TRONICS . . .**

# THANKS FOR THE MEMORY..

I'd only been at Newfield for a few days before Uncle Jeremy plonked a load of bumph about these expansion thingsies in front of me. 'We're doing a competition and they're the prize' he said 'so get on with it.'

No consideration for the fact that I'm Apprentice Competition Minion and have had no previous experience in writing these competitions! I wouldn't mind if Boss Comp Minion could have helped me, but he was far too busy working on 'Why did Uncle Jeremy give me this competition as my first assignment as Competition Minion Apprentice?' to come across and give me a helping hand. Oh well, Boss CM did warn me that life as a comp minion is a tough one.

Anyway let's see if I can manage. These lovely people at DK'Tronics are giving away some of their absolutely brilliant Amstrad hardware add-ons, and if you win this fabulous competition then YOU can choose your prize.

Using these add-ons you can do some pretty neat things with your Stradale. For a start you can turn your trusty of 464 into a gleaming 6128 (along with a bit of polish). There's also a Light Pen ROM so you can draw using your monitor screen as the pad. If you feel like talking dirty to your computer then you can always plug in the ROM Speech Synthesizer and chatter away long

into the night . . .

On the other hand, if slow memory storage and accessing really get's up your snout then the 256K Silicon Disk sounds just the right sort of thing to speed things up. Compatible with both 464, 664 and 6128 computers the silicon disk allows you to use 'b' and 'v' drives automatically.

Tempted by these goodies, eh? Well, there's THREE first prizes of any two of these products and a further THREE prizes of any one. All you

have to do is name five songs with 'MEMORY' in them. Easy, huh? Okay, so it's not so easy, but then, just as I have just found out, life never is . . .

Get searching through your old record collection and send your entry in (postcards please, or back of sealed envelopes), complete with five songs with the word 'memory' (or 'memories') in the titles to NAME THAT SONG, AMTIX, PO BOX 10, LUDLOW, SHROPSHIRE, SY8 1DB to reach us by 30th January. By the way, be kind to our mail sorters by making sure that you put AMTIX on the envelope . . .

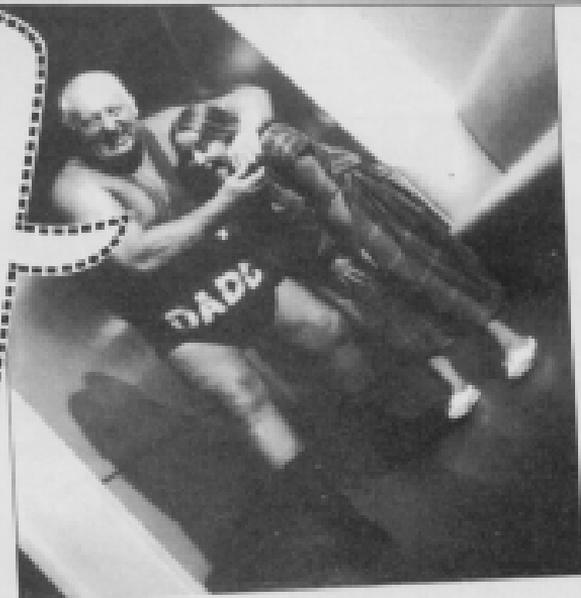

SO YOU THINK YOU'D MAKE A CAPTION WRITER?

HUNDREDS AND HUNDREDS OF POUNDS WORTH OF SOFTWARE TO BE WON IN THE MELBOURNE HOUSE PHOTO CAPTION COMP

**AMSTRAD  
FIVE  
COMPETITION**

**You could win the Complete Works of Melbourne House for the Amstrad**

Out with your caption writer's thinking cap, sharpen a pencil (or two, if you're that rough) and fill in the speech bubble. Send off the piece, remembering to add your name and address, and you could win a prize of epic proportions if your entry arrives by 30th January 1986. Simple please, to ROCK, WRESTLE and WRITE! PO BOX 76, Ludlow, Shropshire, SY8 1QB.

NAME .....

ADDRESS .....

POST CODE .....

40 AMTIX January 1986

It's amazing what you have to do nowadays, when you look for a company as a Publicity Person. I mean, there was Melbourne House's (MAMA BYE!) (she's Wonderful), sitting quietly in the office one day, considering what she should do to promote the upcoming new wrestling game (Daddy's Rock'n' Wrestle) when in came just the man himself. . . . It full wrestling gear.

"Yes", said a passing photographer. And "Oho" as an idea crossed his mind. And before Paula could finish writing the press release telling people about the different wrestling moves contained in the game, she found herself in a corset, with Big Daddy's arm round her neck being snapped by the superkeen lensman for a publicity shot.

Then it was back to the office for Paula, to add the paragraph about the ten opponents you meet in the game and the rock sound track that plays along while you wrestle. All in the working day of your average Melbourne House Publicity Person, you professional.

And now the photo has been developed, printed and sent to sunny Ludlow. Paula, you see, was a bit stuck in her head to caption it. So she decided to offer one set of Melbourne House's complete works to the writer of the best caption for the photo. And this covers all the game (ROCK, WRESTLE and WRITE!) will go to the winner up. So if you think you're the wildest person alive, here's your chance to cash in on your talent.

**ROCK, WRESTLE and . . . WRITE!**

# THE WAY OF THE

# exploding fist

Become a master of this mysterious ancient art: progress from novice to tenth Dan, and test your strength and discipline. You can control your character with either joystick or keyboard - 18 different manoeuvres including blocks, flying kicks, leg sweeps, roundhouse and even somersault!

Challenge the computer, facing opponents of progressively greater skill, or compete with a friend. THE WAY OF THE EXPLODING FIST has it all - addictive competitive action, dazzling graphic animation and sound. The wait is over - you are about to face the challenge of a lifetime! "Spectacular, startlingly original epic, most televisual game I have encountered". Daily Mail. "Quite simply the best program." - Popular Computing Weekly

“The Way of the Exploding Fist is virtually beyond criticism - technically brilliant and visually absorbing.”

POPULAR COMPUTING WEEKLY

“Melbourne House's karate simulation explodes on to the Amstrad. This is a great arcade scoring game as well as wonderful family entertainment.

In Way of the Exploding Fist, Melbourne House have scored a great hit.”

SOFT

“As a sports simulation, this is one of the finest and most realistic we have seen. As an arcade game, it's addictive and pacy. It's clearly destined for the top.”

SINGULAR USER

“I can't tear myself away from this hit game, a karate contest called The Way of the Exploding Fist.”

DAILY EXPRESS

“The graphics made my eyes pop out. Fantastic sound effects, state of the art animation and brilliant game play. One of those games that you can get out time and time again.”

COM

“By far and away the best sports combat simulation available. Exploding Fist on the Spectrum is the best game.”

CRASH

## STRANGELOOP

The massive, desolate factory that services the EARTH orbits silently in the vast DARK WASTES of space.

STRANGE THINGS have been observed from EARTH, very strange indeed as there are NO HUMANS on the factory, it is maintained and controlled by a clever series of ROBOTS, programmed only to serve.

How could the ROBOTS possibly be SACRIFICING happenings on EARTH unless they are somehow being REPROGRAMMED? Intrepid investigation is the only way to find out exactly what is going on...and it must be YOU!

250 rooms of EXPLORATION, PUZZLES to resolve and CURIOUS ROBOTS to meet. GRAPHICALLY STUNNING, full of ACTION and AMUSING encounters, this is cosmic adventuring of its absolute peak.

...This is what they were saying about STRANGELOOP before they even saw this version.

"StrangeLoop is unique, graphically-impressive, vast and devious in what it's all." *Personal Computing Weekly*

"...you're going to use your brain as well as your joystick... StrangeLoop graphics are superb...over Screen (for the Amiga) and Commodore (for

This is a very big and superior space-adventure...an elegantly designed game." *Your Commodore*

and for sale  
**£8.95**

Remember "SORcery", this year's most ACCLAIMED title for the AMSTRAD? Well VIRGIN GAMES' unrivalled reputation for AMSTRAD software is upheld again with the Gang of Five's latest MASTERPIECE.

# AMTIPS

from Robin Candy

After last month's slow start the tips have been flooding in. We still looking for well presented ones and from the fans' assumed knowledge. As for the tips go, I would appreciate help on *Sony's Play and Master*.

This month has been a bit hectic, what with all these magazines produced and software coming out at the same time AND all the new releases to be reviewed. I've planned to say that the Amstrad software is picking up, the standard of some of the stuff being released nowadays is beginning to challenge both the Spectrum and the Commodore, and in a way I'm somewhat over the software that was being sold this time last year.

Right then. That's enough of the intro stuff, so on with the tips.

## STEVE DAVIS SNOOKER

To get any break score you wish just follow this method, as seen in by Philip Doherty of Luton. It is a bit of a cheat, but it'll probably help improve your potting skills for when you wish to play properly.

When you have potted a red then pot a colour. Now retake the shot and pot the colour again. Repeat this process until you have got the break that you want.

## CONCERT

Another set of small tips — this time they are from Steven Hill of Freshford. If you're stuck in the classic *Sony* then you may find the next bit of info interesting.

To free the screens you need the following objects in these screens:

- Golden Goblet in the Wine-tavern;
- Little Lyle in the Palace; Small Book in the first Chateau;
- Golden Chalice in the second Chateau;
- Maple Wand in the Tunnel;
- Sword in the Dungeons;
- Isaacson's Moon in Stone-lung;
- Jewelled Crown in the Strong room.

## BASISBALL

It is a shame that this game didn't turn out to be as good as the versions on the COM

and Spectrum. But if you have bought it, then this tip part in by Durcon Knowsh of Staines is an almost fool-proof way of getting the computer's men out. Though you will have to practice this method for a while before you can start winning matches.

First of all, when one of the Amstrad's players has hit the ball let him get to the first base. Now throw the ball to the fielder on the first base and get him to throw the ball to the bowler, and the Amstrad's player should run a short way towards the second base. While the Amstrad's player is making

this short run towards the second base, throw the ball back again to the fielder who is guarding the first base. The Amstrad's player will then return to the first base and be stumped out.

## DRAGONIRE

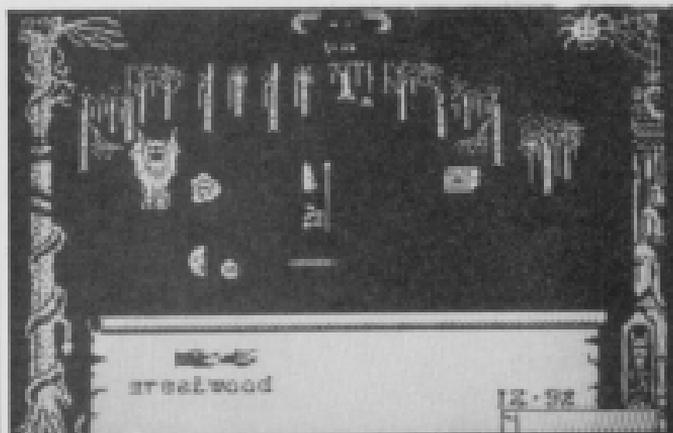

If some of you have been left behind in the Vaults of Loots then but no more because listed below are some tips to help you out. The problem seems to be getting the letter L. If this is what is puzzling you, then read on, but if you don't want your enjoyment of the game spoiled then skip the next bit.

Go to the room with the steel and fireball in it and move the servant over the stool, this will change it into a chest. Open all the other chests in the vault and you should have two keys. One of these opens the chest by the fireball. Open this chest and the fireball should change into the half moon and inside the chest is the letter L.

For those bright sparks amongst you who have got

to Halgor's Sanctuary, go and find, and then take, the energy orb. Now find the skeleton and search to get the diving rod. With the diving rod search the leaves and pools to receive the RARE jewel and the Crystal of Anti-thought. Use the Seal to open the tombstone and go down. Read the message and leave everything except Halgor's seal and go through the door. Touch the Seal on the three spires before they kill you. Take the RETURN spell to get into Halgor's tomb room. Search the tomb for the door key to get out. Leave with half moon and go to Whitewood to find Sanctuary for the key to the Loots vaults.

You should now be in Whitewood. Find the message that says 'Returning mistaken, leaving will reveal' and then collect the bat, the herb and the frog that is in a pool. Now put these into the cauldron and get the wand that floats out. Go next door and use the wand to move the Magician. Take the elf gem and the spell. Give the elf that wanders around the woods the

Mawpaw  
Mawpaw

gem in return for the other half of the Moon Key. Now construct the whole key and take the Full Moon. Deactivate the magic sword with the wand and take it. Now cut down the sapling with the magic sword to make a magic broom with which to sweep the leaves. You should then find a second large stone and a message. "What full moon reveals take it with thee!" this means use the Moon on the stone but don't go without the Moon or magic sword. Before you go, revive the other Raptores in the woods for the Light spell. Now proceed to Sanctuary.

You can kill the goblins with the Missile spell and protect yourself against the Demon's missiles with Merits. If you walk into the Carpet Scroll you are transported to a doorless room. Use the Levoad to reveal the exit. Uncover the scroll with the wand to get the message "The vault of Loric is opened with Sunkery" this is the object you are looking for. One of the goblins has the Sunkery and another has a green chest key which opens those chests. In dark rooms use the light spell. In one of these rooms is a cursed sword — use the sword on this to take the curse off which then gives you the message "I will find what I feel where it is blackest" Now use the sword on the magic spiders to gain some more spells. Unlock a green chest with the green key to get the message "One leads to a gate through the other leads". This is meant to be read in conjunction with the

message you get on the Locate spell which you receive when you destroy the winged demon.

Look for two doors side by side — one has an exit cube in it — then you must use Locate inside it to find a green chest which is unlocked by using the green key. Take the cursed key which has a message from inside the chest. The message is

"One lost, one in ruin, one in hell, one cursed" this gives you clues to the whereabouts of each of the demons. It also gives you the order in which to destroy the demons. To get to the two doors side by side two keys must be found. One is "where it is blackest", it is in a dark room. Use the Light spell to light the room and search the room with the wand. The key is on the back wall under a stone carving. Also search the tomb with the Servant for the Wall spell and kill the wraith with the Same spell. Use the door key to open the locked door to the goblins and inside is a green chest which is opened with the green key. Leave the old door key and take the one that you have just got out of the chest. Now proceed through a dark room and open the locked door at the other side, with the door key. Go through this door and you should be in the room with the door side by side.

Use the Pullroom and the Sunkery to reveal the exit cube and leave with the Sunkery and Carpet key. Now go back to the vaults of Loric.

run the program and start your *Cryptica* original from the start.

## TECHNICIAN TED

These tips originally appeared in issue 8. I know that many of you haven't got that issue (especially me) and, though only 50p — £0.10 here they are again. Anybody this helpful information was sent in by Michael Roland of West Germany. Incidentally, his surname managed to trick Technician Ted on the Internet for infinite lives please!!!

You must complete three tasks within the time limits printed by each one.  
**Ted's Desk by 0:54**  
**Office Store Store by 0:50**  
**Slide Collection by 0:27**  
**Farming Coloured by 0:58**  
**Clean Room by 0:21**  
**Office Working Plant by 0:27**  
**Cartoon by 0:40**  
**Photocopier by 0:12**  
**Newsroom by 0:25**  
**Slide Surface Alteration by 0:26**  
**Laser Slide Separation by 0:15**

**Ray 7 by 12:04**  
**Misses Chip Mounting by 12:50**  
**Two Machines 13:02**  
**Power Generator by 13:18**  
**Electro Plating Bath by 14:00**  
**Quality Assurance Dept 14:20**  
**Aluminium Dust Extract by 14:28**  
**Matthew's List by 14:58**  
**We Call Him Jim by 15:50**  
**The Waage Department by 16:27**

After completing the Waage Department that you must go to the picnic area, up to the Union flag and again down to the Picnet line (in the middle). From here you can now go left and into a new room called **DSI**. **WARNING!** DO NOT GET LOST! Go into this room and walk left through the exit room to complete the game. You MUST keep with it the new ball if you wish to complete the game. To plan and your route to and from rooms use the map that should appear in this issue.

## STARION

Here is more of STARION's solution sent in by Tim Dawson of Barbours. The final part of which will appear next month. It should be easy to follow but let me know if you have any problems.

## BLOCK 2 GRID 1

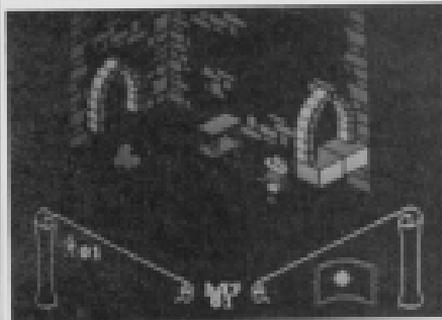

**AD 1882: SHEPHERD** — Detective begins in 'A study in scarlet'  
**AD 1883: YACHT** — Australia's first wireless mail

Down the numbers with their corresponding letters and a message will evolve.  
**BY ALCHAMIST COUNTER PT IS KEY.** This refers to an invisible door that is by the Alchemist's counter. It can be unlocked with Platinum. Inside is the shield Parrot.

**WATS ARE VIEW** — This refers to the statue of the rat needed to free Tels. In the original version of *Dun Darach* there are two; there was a mirror but this was changed to a pearl to avoid confusion.

**SEARS & PEARS** — This is referring to the fact that the pearl can be traded with Sgar.

**GOOD SEE ALL** — This refers to the Telescope.

## FINDERS KEEPERS

These tips for one of Mastertron's barrier games were sent in by C. Ferguson of Bournemouth and they'd platform game *Tony's 17* (from of horsehide rushes to your feet).

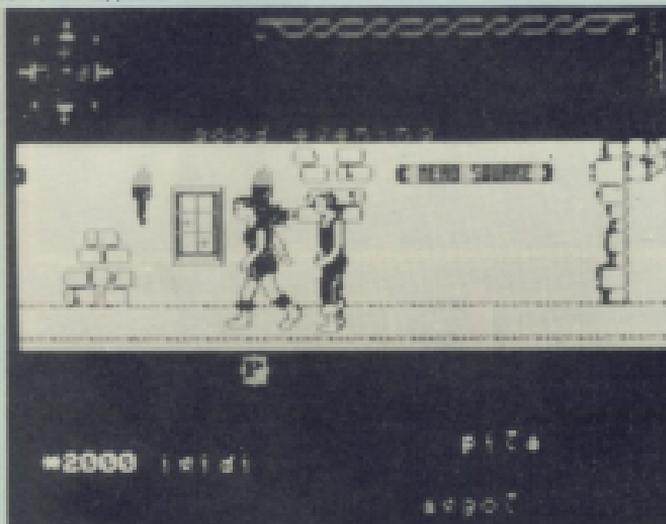

When you hear the 8 sticks of the Dynamite walk up to the safe door and you will notice that it starts to glow, now move back avoiding Dr. Nitron before the door explodes. To get the plans located on the trampoline and jump on to the laser that is just below them. When the laser shoots across walk on on it until you are just below the plans and then jump up to get them.

Now you have to get out of the safe. To do this walk to the far end of the trampoline and make sure that you have walked so far that you are only balancing on the trampoline by one foot. After the laser has shot, bounce four times, avoiding the girl, and towards the door. You should now be free to head back to your ship and finish the game.

## HERBERT'S DUMMY RUN

Here is quite a bit of the solution to the newly released *Herbert's Dummy Run* as sent in by J. Wankling of Birmingham. Next month there will be lot more help on this game plus some for *Evonyon's a Wolf*.

First of all, get the box key and get the honey pot. Now go to the room that you start off in and jump up on to the box. This will spring you up to where you can exchange the honey pot for the teddy.

## DUN DARACH

This month's edition of playing tips for *Dun Darach* gives you the rest of the solution needed to complete the game. In the next couple of months I hope to be printing hints for *Gargavel's Adventure*, which is a lot harder than *Dun Darach* but fortunately I've got quite far in it. The hints printed here were compiled with help mainly from Simon Malham of Canterbury and Richard Ford of Yelford plus a cast of thousands.

With any object, the scroll from Sgar, and the D key go to the castle. Open the first locked door with the D key and go through into a room with 3 revolving wheels (a combination lock). On one of the tables is a scroll with the clue 314466, with **LOWE**. This is a clue to the combination of the lock. If you give the 3 thieves a platter each you get scrolls with

messages on them, take the first letter of each of these messages and you end up with **DPE**, this is the combination to the locked door.

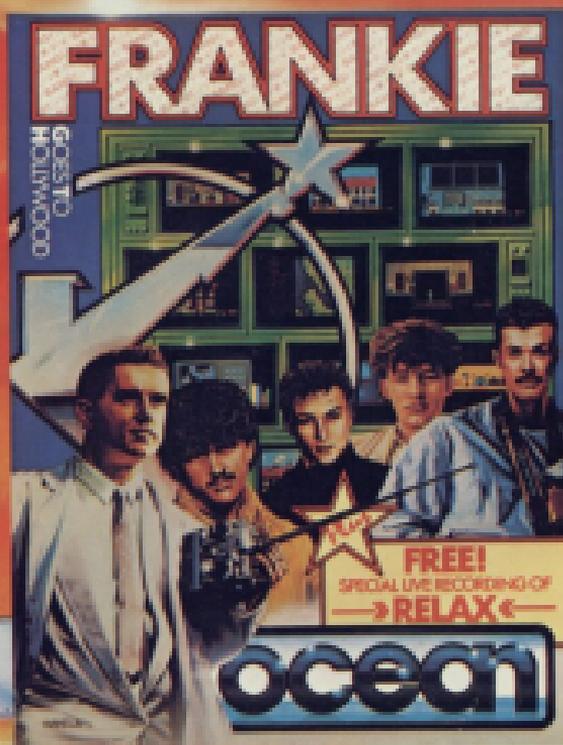

Keeping the scroll (the one from Sgar), drop your other objects on the tables so as to stop the wheels at **DPE**. Now go through the door with the scroll. You will now be in a room with a message **IF FOWNS AND SAN FOR KEY 1981 SGAR** and 4 other doors. Only one of the doors will lead to another room (one of the rest take you outside of that room). To decide which door to go through you must solve the clue 314466, which means 3 to the power of 26. This gives you the answer **32554432**. Counting from the left, go through the third door into the next one and then through the third door from the left again and so on until you have been through all 4 rooms.

Now use the scroll to unlock the locked door. Go through this and you will be in another room with a combination lock. Drop objects on the tables to stop the combination at **QAK**. Now go through the locked door with the paper which is lying just outside the locked door and enter it in Lany. He will be freed and will give you the 4 key in exchange. To finish the game go to Claw Lane and open the locked door which leads from *Dun Darach* and you will see the magnificent effort.

Some of the clues given in *Dun Darach* are a bit obscure but if you are still mystified as to their meaning then read on.

**ART IN ORDER** — Go round all the deposit rooms writing down their numbers and the letter on the wall inside the building. Once you have done this then write

Get the rope. Now with the rope and the teddy go to the smoke room with the daisies in it. The teddy will go and open the right hand side door; you can now go through this. Jump at the rope in the next room and it should extend into a room with a rubber duck; collect this. Load the pop gun with the sock and the pop gun and go to the candle. Exchange the pop gun for the flag and with the rubber duck go to the second screen. You can now collect the pabbles to load the catapult...

## SOUL OF THE ROBOT

I wasn't really impressed with this game or its programmer, *Nobonmuous* but if you're wondering how to complete it, then read on because M. Norman of Plymouth has kindly sent in some tips.

To complete the game you

must travel through three levels. In order to get to each level you must get a transporter key and take it to the transporter room but this is no easy task because the route to the transporter keys is usually blocked by some kind of barrier. To get past these you must collect barrier keys; there are two of

these on level one and you must collect both of these level you become trapped on level two. A good idea at the start of the game is to collect the gun and boost your profits up to about 500 points. Once you have completed the previous levels you should find level three quite easy.

## DEFEND OR DIE

This game is probably the best Defender type on the Amstrad and generally speaking it isn't a bad version. If you are having trouble playing it then this pointer may help you. It was sent in by G. Whittaker of Beverly. 10 MEMORY \$3FFF  
20 LOAD "Defender Die"  
30 POKE \$2014, \$00  
40 POKE \$2015, \$00  
100 CALL \$4025

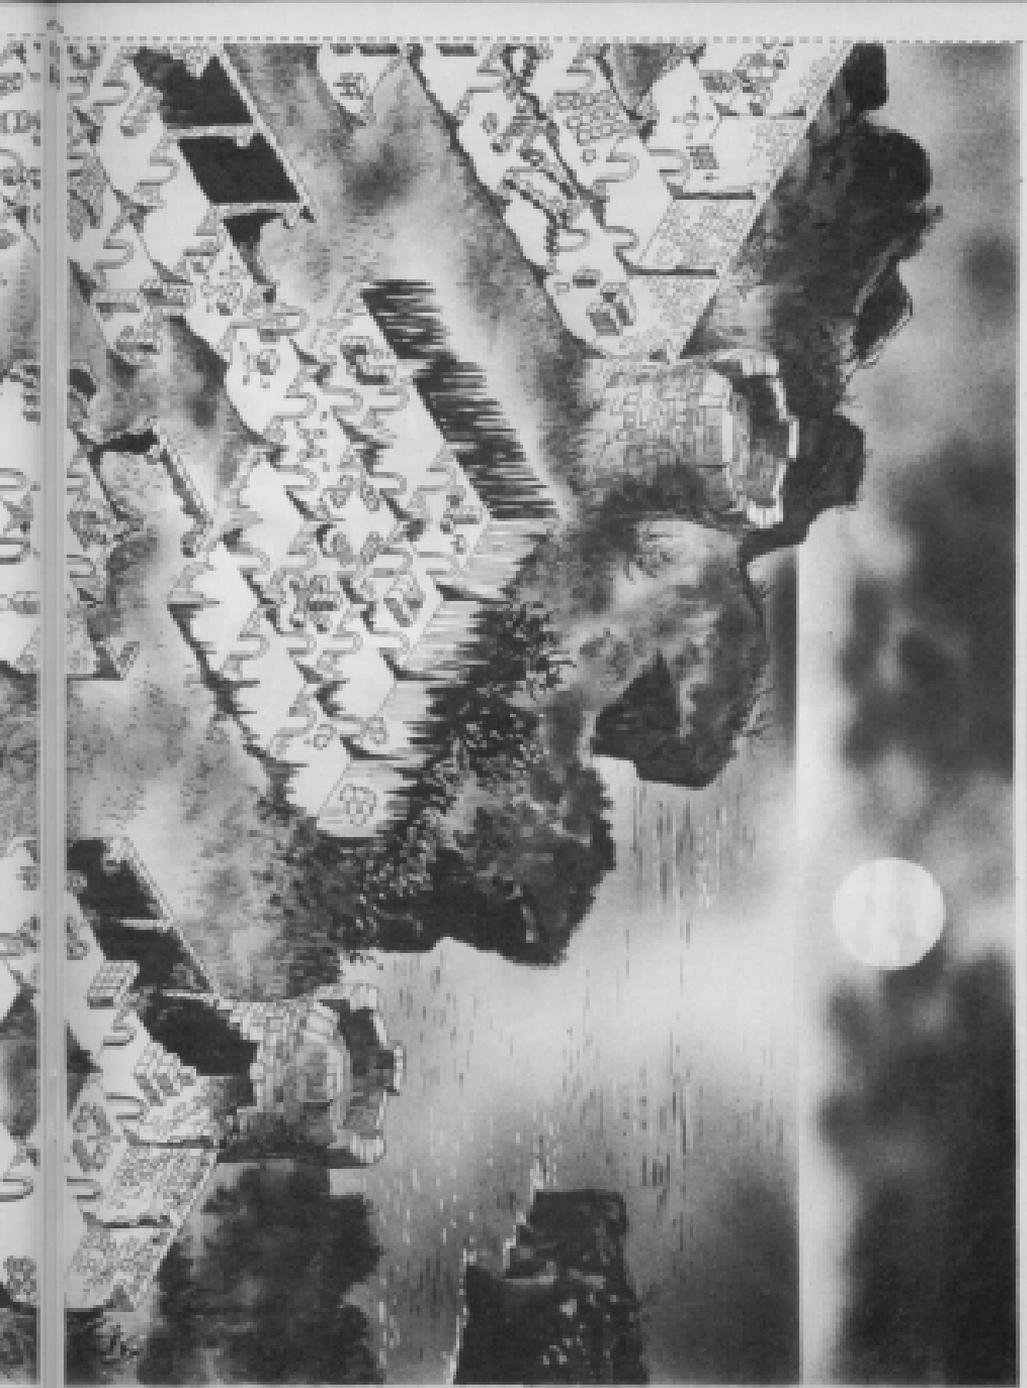

## POKE'S CORNER

After last month's plea quite a few of you have responded with a reasonable set of pointers but I've got the feeling that these haven't already appeared elsewhere, so to I shall winners this month.

That seems to be it for the Christmas issue! Keep the tips coming and remember to sign your name and address on your letter (some people do forget) and please print them clearly because I can't read some of the scrawl that you get down. Send all your tips, info and queries to:

NOBONMIOUS, AMTRIX, PO BOX 76, LINDSEY, GLOSHERS

**Your chance to win  
in CRL's ENDURA**

# a "Ghetto-blaster" NCE Competition

All the thrills and spills of Endurance racing, without all the financial overheads and bills you run up for petrol, oil, machines, people and transport. That's CRL's Endurance for you.

We're talking simulations here. Motor bike racing simulations, and fact. CRL have thought long and hard about all the variables that are involved in motorbike endurance racing, and packed them all into one program. Your take on the role of Team Manager, and juggling with the options open to you, must try and lead your team of riders and mechanics to a successful conclusion at the end of the season.

To mark the launch of Endurance, CRL are going to give away a Toshiba RT7025 portable Radio cassette recorder, which has detachable speakers and a graphic equaliser on board. Not a bad first prize, eh? Twenty five copies of the game itself are also up for grabs, so don't get too disappointed if you send in an all-correct answer to the five questions we're asking and it isn't first out of the motorbike helmet on the day of drawing.

The game itself proves quite addictive—a certain member of the AMTIX team remained in the office one evening, long after everyone else had left for

home, the chip shop or pub. "I'm not stopping until I win", rooth Gaz Sumpter, as we left him to it. So be warned, it's a Game Sumpter Leaves the Pub For, so can't be bad, eh?

- 1) Where are the TT races held?
- 2) Name two famous British Motorbike Racing circuits
- 3) What exactly does CRL stand for?
- 4) What is a Speedway track usually made of?
- 5) In which country were the following motorbike manufacturers first established?
  - a) Honda
  - b) Motor Gazzi
  - c) BMW
  - d) Harley Davidson
  - e) BSA

Put the answers to the following questions onto the back of a postcard or sealed envelope and get your entry in to AMTIX ENDURANCE, PO BOX 10, LUDLOW, SHROPSHIRE, SY8 1DB to arrive by 30th January 1986 and you could be listening to a lot more music in 1986!

Send Busby your bits courtesy of **CIRCUIT HOLDINGS**  
when you win one of

# SIX SUPER MODEMS IN AGGIE'S CHRISTMAS COMP!

Yes this is the Comp that mail order's Auntie Aggie gets to write because she says it's easier  
than sticking stamps down.

It's been another of those weeks with editorial, they really are very difficult people to get on with you know. For starters they expect mail order to do everything, from sorting their post to answering the phone. All we get are constant moans and complaints. We only want a quiet life like any other chimp (it means Considered Highly Inexpensive Mail Processor — or so I'm told). You know the sort of thing, long draws out sup of coffee in the morning while we listen to Simon Bates and 'Our Tune', quiet chat about the events of the previous day and then slip out for a quick banana float down the road.

Anyway the reason I am writing this competition is because Denise in Subs and I are tired of being made fun of in the magazines. I can scarcely open a mail order form these days with seeing 'Dear Auntie Aggie please send me ...' Why know I hate that name. Now about this competition, Jeremy

tells me that there are six things called acoustic modems being given away by **Circuit Holdings**. Kind of them isn't it?

I don't quite know how the thing is meant to work but from the look of it I should say it's used for keeping your telephone warm. Jeremy says they're used to talk to other computers and if I was to read this bit about them in this issue, I would understand everything. When he expects the time to come from to sit and read AMTDX I'll never know. Besides which, I have to spend all day on the phone when I'm not sticking down stamps, so there's no time to put our

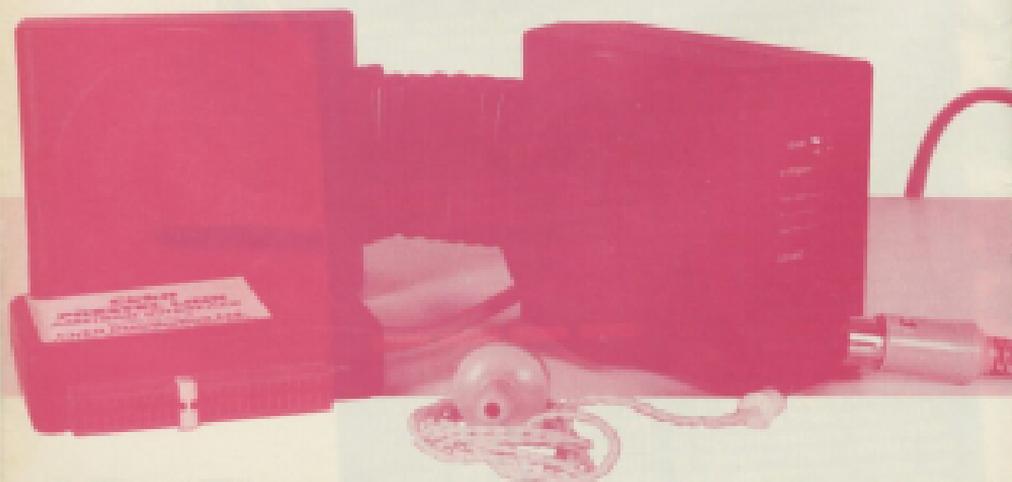

muffs on it — but there you go — do your own thing, I always say. Wait a minute though — it's got a little snug-fitting ear muffs on it, I wouldn't ever have to answer it ...

Well Aggie seems to have gone and left you nothing to do, never mind I'm sure she has told you all about the prizes — and even if she didn't we have reviewed the package in this issue. You are bound to agree that they are well worth winning, especially if you don't feel up to barking out the message £30 it would cost to buy one. If you want to be in the running to win a **CIRCUIT**

**HOLDINGS** Acoustic Modem just answer (correctly, in the opinion of our steapy judges) the questions below.

1. In two words tell Carol what a 'Modem' is.
2. What is another phonying slang for Telephone?
3. **Circuit Holdings** used to make an acoustic modem for what company?
4. What baud rate would you use for Telecom Gold?

The first six correct entries drawn will make the entrants the proud owners of a **Circuit Holdings** modem kit. Once you have dressed up your answers just write them on the back of a post card (or outside of a sealed envelope) and send it to us by the 30th, January 1986. Put your name and address on one side and this on the other: **AGGIE'S MODEM COMP, AMTDX, PO BOX 18, LUDLOW, SHROPSHIRE, SY8 1QB** — and don't worry Aggie's not on the panel of judges.

# Still on top!

SO YOU THINK YOU'D MAKE A CAPTION WRITER?

HUNDREDS AND HUNDREDS OF POUNDS WORTH OF SOFTWARE  
TO BE WON IN THE MELBOURNE HOUSE PHOTO CAPTION COMP

**AMTIX**  
**COMPETITION**

So, Steve you know. When it comes to guessing around on camels, Lawrence of Arabia didn't quite deserve the name. **STEVE CARROLL**, the programmer responsible for the fighting game that has lots of 'Lancers (Ponies, **FIGHTING WARRIOR**), is seen here dressed in his Mum's best curtains atop a camel. (After that **BOB GAGGAY** swap. Ms Byrne of Melbourne House had to get her own head on someone, didn't she?)

Quite why he found a camel in North London still remains a mystery, but no matter. Your faithful Competition Mission fan secured a second! Caption Competition from the Wonderful **PAULA BYRNE** of Melbourne House. This time you need to come up with a witty, witty,

snappy statement to gop into Steve's speech bubble.

And as you can see, Steve is looking suitably vicious — maybe he doesn't like camels too much? Whatever the reason for his grinning, it's up to you to write a little script which puts words into his mouth (or bubble).

The wittiest bubble filler will win a full set of Melbourne House software for the Spectrum — and of course there are fifty copies of **FIGHTING WARRIOR** to be won as consolation prizes. You too could be shopping and hawking your way across the desert on a quest to save the princess who's locked away in a pyramid. And all

The wittiest bubble filler will win a full set of Melbourne House software for the Amstrad, and of course there are fifty copies of **FIGHTING WARRIOR** to be won as consolation prizes. You too could be shopping and hawking your way across the desert on a quest to save the princess who's locked away in a pyramid. And all for free.

Once again your Competition Mission fights his way to another exciting competition and strikes up a deal with the striking Paula Byrne of Melbourne House.

Get your entries in to **AMTIX (GAME) COMP**, PO BOX 10, LUGGOW, BIRMINGHAM, B26 1SE to arrive by Mon January 1986.

'ELLO STEVE, GOT A NEW CAMEL?

## OUT WITH THE OLD WORDSTAR IN WITH THE NEWWORD

As the unobscured re-birth of CP/M continues, the quality of the software available is also increasing. Now the Amstrad 6128 and 6128+ have a professional word processor and checker that could be the envy of many business systems — but at 1/10th of the price.

Wordstar is almost certainly the most widely known word processing program available for CP/M and MS-DOS computers. Although some of its popularity is due to its having been around at the right time, it is undeniably a good, competent word processor. Two of its major drawbacks, however, are that it is not particularly user-friendly, and that its manual, at least until recently, could best be described as well-intentioned but poorly organized and written in computer jargon — American computer jargon at that. These days Wordstar with its spelling and mail merge tools, multiple windows in the region of £200 plus VAT. Even the not clean Pocket Wordstar for CP/M 2.2 is still over £180.

### MORE THAN JUST A CLONE

Newword has been written by some of the people who were involved in the creation of Wordstar. The story being told about it is that they were dissatisfied with the lack of effort at Microsoft, Wordstar's publishers, to improve the product, so they left expecting to take the world by storm with their improved version. Newword is intended to be used on the 6128 and 6128+ machines. As an alternative to Lotus Smart, Newword allows the production of documents which can then be sent to another machine, perhaps a photo-typesetter.

The advance publicity leaves the impression that Newword is a Wordstar clone. Even so, as an habitual Wordstar user I was pleasantly surprised to find the initial format and menu screens were considerably cleaner and more comprehensive than those in Wordstar.

### GETTING IN AND GETTING ON

On loading Newword a few introductory messages appear and the copyright details and serial number codes to make entry for the Opening Menu file. That must have sensible name that Wordstar's equivalent, strangely named 'telling No file'. The Opening Menu deals with the various file handling options: opening new files, closing files, saving document files if it returns to this later. From here you can also copy, delete, rename or protect a document. A useful function handed down from Wordstar is the ability to run other CP/M programs without having to return to the opening system.

The other option that I haven't mentioned is to type J for help. The system of help screens in Newword is most impressive — much more so than in Wordstar — and if you type J at this preliminary stage you are presented with a summary of the help system that is easily readable and understandable. In fact, through Newword you can type J for help at any stage, and you are given a concise explanation of any of the commands you can use.

To start typing a document — a letter, report, your latest novel or whatever, you type J at the start of the file. You are then asked to name the file you want to create, or the already existing file you wish to edit. Once the file name has been entered the screen changes to the 'Edit Menu', and, if you've chosen a file that already exists, the first screen of lines is displayed. Then you're in business. It all takes less time to get started than it has done to read this.

### THE JEWELLED KEYBOARD

If you're new to word processing, you shouldn't really have any cause for alarm at this point. Simply start typing — you soon get the hang of using the basic controls provided to help you. The demonstration copy of Newword was already set so that the cursor keys moved the cursor the way I would expect them to, presumably if you buy Newword specifically for the Amstrad 6128/28 or PC16128/16 this will also be the case. If you have become accustomed to using Wordstar then you can, if you wish, continue to use the familiar 'diamond cluster' of control keys.

As you continue typing, you can almost certainly make a mistake. If you're not using a word processor, nothing can ever replace the wonderful feeling you get when you realize for the first time that never again will you have to use Tippex or a rubber! To erase a mistake in Newword, press DEL, that deletes the character to the left of the cursor. To delete the character that the cursor is actually over, press the CLR key (or you can use CONTROL G, a useful feature of Newword that I haven't seen on other word processors is that you can 'unerase' the last character or line that you erased. The erased characters appear at the position of the cursor so you could see the error and make small blocks of text about. You can be in two different modes when

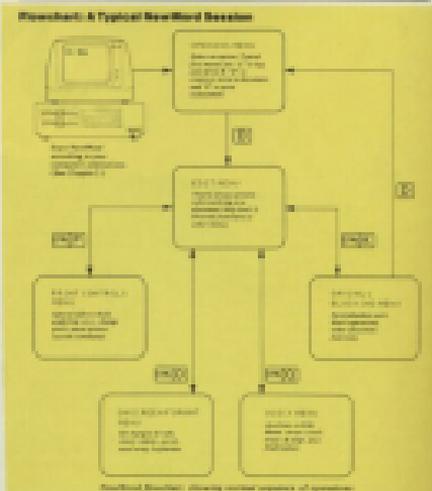

typing in Newword: insert or not. If you're in the insert mode (you can tell because it says 'insert' at the top of the screen), any characters typed are inserted at the point of the cursor. If you want to type over some characters then you need to turn off the 'insert' mode by typing CONTROL Y. This is exactly the same as in Wordstar, and I personally find this a bit of a nuisance. I would prefer that typing over characters automatically erased the ones underneath and that if you wanted to insert you would press a key to provide you with sufficient space to do this, in other words to open up a visible gap in the text. Still, no doubt this is a matter of personal preference.

If you're typing a lengthy document, it's wise to save it to disk from time to time. CONTROL K does this and returns the cursor to the point it was at before — an important improvement on Wordstar. Device justification can be enabled, margins can easily be altered or released, and the search-and-replace function works extremely well and very quickly. Although can be considered an extension you can find the computer in search for all words beginning with 'a' by instructing it to search for 'a?' — the question mark indicates that any character is acceptable as the third character in the word.

### AN EASY WAY TO THE PERFECT POINT

Printing out a file can be done only from the Opening Menu, unlike Wordstar where you can, if you so desire, print a file while you are editing or creating another file. In practice though, you probably wouldn't want to do this very often unless you were at the keyboard non-stop, all day long.

Adding the usual print inter-leave facility is easy. At any time type CONTROL R and the Print Menu appears at the top of your screen. This clearly shows you which control codes are necessary to send hyperface variations, etc. to your printer. A multiple facility is available which allows production of personalized letters, for example, quickly and easily from standard paragraphs. You can move blocks of text around in the file, copy blocks and write them to separate disk files. You can also read and merge other document files saved on the disk. There are many other facilities I haven't mentioned that exist in Newword, as far as I could tell after using it for several hours there was no major facility missing that you would expect from a

# LETTERTECH

## ANTICH LETTERS

### FROM THE HEAT DESK OF JEREMY SPINER

Amsoft is attracting its share of attention, and more than its fair share of phone calls from readers desperate for advice on a variety of topics. It's very disappointing, it's true to hear from you. But it would be better if you could write in with the more sinister problems, so we can publish your letters together with our answers in order that other readers can benefit. After all, a problem published in a problem column is a problem . . .

Also, let us know your views on the material published together with our suggestions for topics you would like to see included in Amsoft. Of course it goes one way only: a feedback note, and then you might have some useful hints and tips for the applications or hardware side of life. It's so let us know. I can't depend too far on playing tip for Wordstar. You never know we might be so inspired we could even end up sending you a TPO software voucher for letter of the month.

Please include your telephone number when writing to Amsoft, just to ease my mind more information than your letter contains. All letters should be addressed to ANTICH, PO BOX 96, LUDLOW, SHROPSHIRE SY8 1DB

## NEEDY REVIEWS

Dear Amsoft  
First let me make it plain that I am not a game player at all I have got *Crusty Name War* and *Chocobusters* and that's about it. I know the mention of *Prozac* and *Flowing this CP/M* that caught my eye on the cover of your first issue. Having browsed I bought.

The main games reviews are excellent and this letter is aimed at making you realize that they are appreciated. Non-games software is so expensive to buy that sensible reviews are extremely useful. I wish I had seen one on Amsoft before I got it. How anyone can produce a spreadsheet without the facility to add new columns or rows is totally beyond me. I am a user of *Visicalc* at work so that is my starting comparison. I recently tried out the good work and see if you can sort out a good word package for me.  
**Derek Tatham, Chelms**  
PS What should we call of current software seems pompous.

Many thanks for the three words *Demot*. It's far better to Amsoft they do point out in the documentation to Amsoft that the facilities are limited because it was designed to be easy to use. That sounds like a good reason since there are packages which are much more powerful, and yet offer easy entry points for first time users - but not for the price. Also I would wish if a *3d* contained now you know if you want to try something better how about Supercalc II from Amsoft or even hang on for

*Crusty* which included very powerful graphics facilities. However on *3277* I think it would help them. It sounds as if your games software could do with a bit of upgrading as well.

Next issue will be doing a feature on spreadsheets which will include *Quattro* early packages that the *MS-DOS* will work given.

As for a music package are concerned we are searching the East from top to bottom for such a thing. I met a couple of others in the process of producing one, but it is far from finished. If anybody is aware of any progress in this area please let us know - ASAP. Anybody got any ideas on what to call "serious software" if it sounds pompous?

## MS-DOS TROUBLES

Dear Amsoft,  
Just bought AMTIX and I would like to congratulate Newfront on producing an excellent magazine for limited owners. I've been the owner of a 6125 for a couple of months, I bought it to replace my 1600 Series because the business software is better.

My main purpose is to use it as a word processor for phototype setting because I run a printing company. I have been trying to send data via a modem using a program's MS-DOS, but with little success. Is there anybody on your team who knows about the serial port and could advise as to how I get XMODEM

working. I regret that I cannot get any satisfactory help from Amsoft, they are either too busy or stupid to even try to be a nuisance. My modems is an old EPD type and it worked well with the Sanyo. The D plug is wired 1-1, 2-2, 3-3, 4-4, 5-5 with pins 6 and 30 hooked at each end.  
**Mark Godding, Birmingham**

Someone once proclaimed that very soon man would be designing computers so sophisticated that no one may be able to understand them. If you doubt that will wait for five years you will see to try and find a man who understands the MS-DOS. I am convinced that software is it that it does, it does it, or it does not - and that's an end of it!

However in this case I am pleased to be able to report that it is not the MS-DOS that is fault of your writing but the software driving the software. The software provided an MS-DOS file format that you will not want XMODEM properly.

If you have to use XMODEM then use some other software to drive it. The IP command from CP/M plus will do, since you have already the patch program given at the back of the *Handbook*. However if you have to use MS-DOS then look around for some other software, perhaps the Honeywell interface software would suit you. To compare you offer such an experience with an XMODEM that, in my opinion you should TPO software voucher.

professional word processing program.

## NEWS: A BRIGHTER START

Inevitably somebody is going to compare Newfront with Wordstar. Let me say right away that Newfront is a lot better than Wordstar. It works in much the same way, but its visual presentation is much better: the first-time user should have no problems at all in finding his or her way about thanks largely to its very clear, understandable menus, error messages and an excellent range of help screens. Many of Newfront's functions are much easier to use simply because of the improved presentation. The manual text supplement are extremely good. The manual assumes no previous knowledge of computers, it tells you all you need in a simple, friendly way that doesn't fall into the trap of so many American self-teaching books that annoy you by their verbosity, baloney, all-American humor. For more advanced users, the index is good, though not brilliant, and so far as I could tell everything is explained in sufficient detail, including lots of information about installing Newfront in the appropriate way for different kinds of computers.

To sum up, it's very good value for \$95, which price includes a spell-checker that I was unable to use for this review. If you're only going to use a word processor, you'll occasionally miss it. However if you need the MS-DOS mark for the Amsoft disk versions is perfectly competent and you should get for that. But if you need word processing as a major activity, especially for business users, then Newfront is well worth serious consideration. You really do need to try it out to do justice to all its facilities, and truly use them there is little space left on the disk if you're reinstalled to a single drive. I spent a large part of every day using a different kind of word processing program on a different machine, and I'm quite happy to do so, but Newfront on the CP/M20 is at least as good as that.  
**John Fleming**

## THE WORD IS OUT

The spell-checker that comes with Newfront was considered to be so special that we thought it deserved a mention in its own.

The most important part of any spell-checker is the dictionary and the Word users magazine of Brownie points here with its massive 45,000 words. That's twice the size of the dictionary that we use on our AppleIIs. Despite the cunning data compression techniques

used, the dictionary occupies a file 1364 long, so together with its subsidiary files there is only 2K of space left on a 10K16 formatted disk. No question about it, to use this program you are going to need two disks.

The program is subdivided into a number of COM files, each performing a different task. The most important programs is installed with SW. The first thing you are asked for is the name of the document you want to check and then the name of any specialized dictionary which you might have created, for legal or specialized medical terms and the like. TW then compares a list of UNIQUE words and reports the number. The next process is to compare that list against the dictionary and then report back the unmatched words. Of course this unmatched words list will be displayed then, and not recognized, the user has to check through the list — which is written to a separate file — word by word. The user panders on each word as it is pulled out from the file, a correct word would be discarded from the list file and perhaps added to the update dictionary. If the word is wrong but you are unsure how to spell it you can ask the program to search for the correct version by a rapidly scanning process called SCAN, resulting five times out of ten you will be presented with the correct spelling which you adjust by correcting the misspelled word. The new spelling is then added to the mismatch list. Once you finish scanning a word that is so badly misspelled or typed you haven't a clue as to what it is intended to mean, Press W and the list of best sounding the misspelled words are the screen. Again you can correct it and add the new word to the mismatch list. If you come across a word that you don't want to alter but would like to find in the text afterwards you can mark the word and find it with a search function.

Check the mismatch list has been processed and any corrections have been added you can list back and polish Spelling while the program goes through the rest of the misspelled words. The great advantage of this system is that if you repeatedly spell a word wrong, the program really doesn't know how to spell it and there's no chance of guessing "typing error" since the misspelled words (and the program will change every incorrect occurrence automatically, making sure that words which had correct letters go back with correct letters. The misspell list is an option: do you could use the spelling checker to perform intensive replace tasks on a document.

I mentioned that The Word has a series of subsidiary COM files. The WCOM is the one that it takes care of the other COM files, each of which can be

used independently. For example you could search for the correct spelling of a word by entering A-SOUND, success to SUCCESS you find. Actually it doesn't really come up with the result but I'm sure it's tempered to. Another COM file solves programs for you while one called FIND COM could be used to find all four letter words beginning with 'T', or all six letter words beginning with 'C', ending with 'T' and with an 'L' in the middle (the only one I can find in the dictionary is CLELTY) — how about that for the misspelled words? If you want to know how frequently a word is used in a document then WORDFREQ.COM produces a list of the unique words in a document together with the number of times each word was used. Wordstar links a word count facility but with Newword the job can be done by using the WCOM (seems a strange way to count words).

And finally the one thing which worries checkers, and I have problems with one homonym. Words which sound alike but are quite different, you know the sort of thing — clear and near, the third has a separate homonym dictionary which checks through a marking of the likely problem words. Not a perfect solution but I give a good-fidence towards being good.

I have to many problems with people who don't understand my spelling that I am forced to move away from my innovative style and adopt the standard. This is not spelling checkers really useful and they find me a right pain. Personally I feel the spelling checker alone, it worth the asking price for the entire Newword package. My only major complaint is that it's not possible to remove words from the main dictionary, which is American after all, so it lets through Americanisms which otherwise fits the system and those lacking in manual dexterity the word is — The Word.

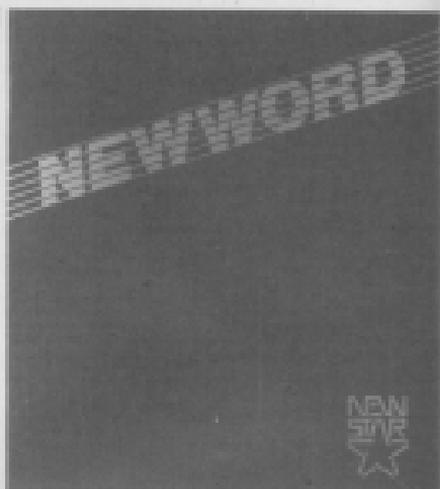

## THE BIT AT THE BIT

Newword is designed to run only under CP/M plus. Two disk drives are recommended but one could be used as a push. Owners of the PCW 8000 can fit the program files to the multi-track RAM disk and use the drive for data.

The Word runs under either CP/M system but it is even more determined to have a whole disk to itself.

As yet The Word is not supplied separately.

Newword and The Word are published by Newstar Software Ltd, price 199 to VAT.

## MINI INTO A MAESTRO ?

There's been a good deal of cynicism surrounding the launch of the new DK Tronics memory goodies. Their claim, that you could turn a 484 or a 684 into a 6128 has been regarded with derision by some and with expectation by others. The truth is that you cannot turn a 484 or 684 into a 6128 anymore than you can turn a Maestro into a Maestro. What you can do, and what DK Tronics have managed to do is to increase the available memory of the earlier machines to match that of the 6128 — or even exceed it if you prefer.

Sliding a few extra 8088 chips on the back of a 484 to make it into a 128K machine isn't as revolutionary as you might think. After all that's exactly what Amstrad did. They added a further 68K to complete the 6128. So the additional 68K is not available to store super huge BASIC programs for the simple reason that it isn't there all of the time. The 68K is made up of 4 banks of 16K. Only one of those "transparent" banks can be seen by the firmware at any one moment. Amstrad provided a set of programs which help the BASIC programmer manipulate the pages, more commonly used for storing whole screens worth of text. However, by a simple RAM disk for loading areas or variables.

### INSIDE OUT

DK Tronics have put on the outside what Amstrad put on the inside. And more as exterior units they don't look out of place in their smart boxes which

match the colour and the gilded designs of the Amstrad computers. The units seem to us as for the 484 computers, the next type will be for the 6128 though these will also fit on the 684 (since 684s must lend a lot of cash). Apart from the hinges on top of each box (protecting its function, the only way you will be able to tell the difference is by opening them up and counting chips. Judging by the looking matter on the sides of the boxes we can expect to see a lot more DK Tronics products presented in the same case.

The most important part of the whole deal is the software that is going to make these little boxes talking to the. Although the necessary code is supplied on tape DK have deliberately left it unprotected so that it can easily be loaded on disk. Evaluating the loader software only takes up 6K so it's pretty discreet. Once loaded you are offered the choice of loading the 160K within a given area of memory, and pressing the enter key auto-

## TASWORD 6128 The Word Processor

TASWORD 6128 allows the additional 64K of memory in the CPC 6128. This gives text files that are over 100K long. TASWORD 6128 includes mail merge and all the other features of TASWORD 464-D. With a new notepad mode and other additional capabilities TASWORD 6128 is the most powerful of the TASWORDS.

TASWORD 6128 for the Amstrad CPC 6128 disc **£24.95**

## TASWORD 464-D The Word Processor - word from Mars!

This is the new TASWORD especially developed to allow the capabilities of the CPC 464 and 464-D machines. The additional facilities include a larger text file screen automatic on-screen disc directories during save and disc operations. A major new feature is the mail merge facility. This gives multiple prints of your correspondence, forms, etc. with each copy containing, for example, a name and address automatically taken from a disc file containing the data. This data can be entered using TASWORD 464-D, or created using the Masterfile Program Extension package. A powerful word wrap and conditional printing facility is included - parts of documents can be printed according to user specified criteria. TASWORD 464-D works on all Amstrad CPCs, and is only superior. disc.

TASWORD 464-D disc **£24.95**

## TASWORD 464 The Word Processor

"There is no other justification for buying 464 than this program"  
POPULAR COMPUTING WEEKLY, NOVEMBER 1984

Your 464 becomes a professional standard word processor with TASWORD 464. Supplied complete with a comprehensive manual and a cassette to which contents of the program are TASWORD 464 TUF04. This makes you word processing using TASWORD 464 whatever you have serious applications or simply want to know about word processing. TASWORD 464 and the TUF04 make it easy and enjoyable.

TASWORD 464 cassette **£19.95**

## TASWORD UPGRADES

TASWORD 464 and Amstrad owners send your original cassette for the first 20p/kg plus post if you have sent 1380. Your original will be returned together with TASWORD 464-D or TASWORD 6128 order.

## TAS-SPELL The Spelling Checker

TAS-SPELL checks the spelling of TASWORD 464-D and TASWORD 6128 text files. TAS-SPELL has a dictionary of well over twenty thousand words which are compared with the words in your text file. You can add your own special words to the TAS-SPELL dictionary. Please note that TAS-SPELL works only with TASWORD 464-D and TASWORD 6128.

TAS-SPELL disc **£19.95**  
to be used with TASWORD 464-D or TASWORD 6128

## TASPRINT 464 The Style Printer

Amstrad dot-matrix printers cannot print your programmes and letters in a choice of other impressive print styles. TASPRINT 464 allows the graphics capabilities of dot-matrix printers to form, with suitable gaps of the printed output in a range of the fonts varying from the futuristic GATEWAY to the hand-writing style of PALACE SCRIPT. TASPRINT 464 uses dot-matrix printers listed below and can be used to print AMSTWORD, TASWORD 464 text files. TASPRINT 464 gives your output originality and style. Completely compatible with the 464.

**CONTRACTA** - bold and heavy, good for emphasis  
**DP18-RWD** - a futuristic script  
**LECTURER LIGHT** - clean and pleasing to read  
**NEEDHAM** - a serious business-like script  
**PLEASANT SCRIPT** - a distinctive flowing font

These fonts are used. Please note the different sizes of some print styles and fonts.

TASPRINT 464 cassette **£9.95** disc **£19.95**

## TASCOPY 464 The Screen Copier

A suite of fast machine code screen-copy software for the CPC 464 and 464-D. Three high resolution screen copies in black and white and double-line shaded copies with different dot densities for the various screen colours.

TASCOPY 464 also produces 'paper-stair' screen copies printed onto two or four sheets which can be cut and pasted to make a desktop.

TASCOPY 464 cassette **£9.95** disc **£19.95**

TASPRINT 464 and TASCOPY 464 drive the following dot-matrix printers:

AMSTRAD 464	AMSTRAD 464-D	AMSTRAD 464-D	AMSTRAD 464-D
AMSTRAD 464-D	AMSTRAD 464-D	AMSTRAD 464-D	AMSTRAD 464-D

# CP/M — ALIVE AND KICKING

This month, ROY JONES senses  
a turn in fortunes for CP/M, and turns  
his beady eye on a couple of Utilities . . .

The newcomer to floppy disks does not take long to find out that these pieces of magnetic media seem to have more reproductive capabilities than rabbits. Six months of using a machine with floppies will probably see more users with a collection of 40 plus disks, all crammed with files which had better be kept just in case. By this time you might start to get the feeling "well I'm sure I must have saved it for something, but I can't read it any more." It's a nice day, or "year" which disk had that letter from Edie.

Index II is a program which seems to offer a solution to the problems caused by those multiplying disks, such as lost files. Index II is a disk packaging system, designed to save after directory entries for all your 40 plus disks in one big directory, all neatly sorted into alphabetical order with the name of each file, the date cataloged, and a label to indicate which disk it is from. This is an essence of what Index II does.

The CP/M machine used to test the Index system was a slightly used "home-brew" combination with three 1.25" and two 5" drives. The 5" disk drive had 1.5 million with 180 pages directory entries. The 5" disks are mainly used for archiving material and do provide a good supply of "test" disks with which to put Index II through it's paces.

## INSTALLATION

The Index II distribution disk contains two versions of the program, one for microcomputer systems and one for floppies, placing chosen the right version if it is necessary to install the program to suit your machine. On running the install program one is presented with a list of 34 computers. In most cases all that will be needed is to select AMSTRAD. The documentation includes information on how to

With the advent of MSDOS and the IBM PC with it's numerous clones, it must have seemed to the software houses that CP/M was a thing of the past, not to be bothered with any more. The tables have now turned and it looks as if IBM had been collectively CP/M is about to enjoy greater popularity than ever before. The software houses are plugging out their old IBM machines again.

Micros, the authors of the famous WORDSTAR have issued ROCKET WORDSTAR — a somewhat run down version of the old format, selling for slightly more than £100. They may have missed the mark a bit — it should have been about £50 — but it's a step in the right direction. Indeed, the UK companies seem to be turning out some interesting looking language compilers and utility programs for CP/M machines at very reasonable prices, less than £50. The indications are that over the next months we will be seeing more and more low cost CP/M packages appearing. There certainly seems to be a revival.

Amstrad alone is not responsible for this revival of CP/M. The business community's mass migration to 16 bit machines is pulling over increasing numbers of second-hand and second 5 1/4 CP/M computers on to the market. Machines which were selling for 5 years ago at £1,500 can now be had for less than £500 — and this is for a new machine. Prices for 16 bit machines are also falling, but not to markedly low.

These factors, and the growing realization among computer users the tremendous advantages of having a standard operating system with a huge amount of readily available software, has probably sounded the death knell for expensive "home type" computers such as the BBC with their own special kind operating systems.

do further (optional) program customisation to provide password protection and so on, if you want to get involved in such matters.

## EASY TO USE

Once installed, the program proves very easy to run — the menus are so self explanatory that referral to the manual was hardly necessary. The commands are simply menu choices, and so special control key sequences are required. It is a mistake to refer to "data" when you are in an exploratory stage. The back space facility provided on the screen key, Index II was put on a disk in drive B. The disks to be catalogued were then fed one after another into drive D.

This arrangement worked fine, and any selection of criteria could have been used. It would not be very easy to run Index II on a single drive system, however, unless one also had an RM drive, as with the Amstrad PCW 8516,

as an incremental amount of disk shuffling would be needed. To use Index II on the 8516 machine all that would be required would be to first copy the Index II program files into the RAM disk and run it from there. When the cataloguing session was done, the catalogue data file produced would have to be copied back to the Index floppy for permanent storage.

To catalogue a disk, one first enters the drive to be searched and then supplies a disk identifier which can be up to four characters long, and can be any mixture of letters and numbers. This disk identifier is used in the index file to distinguish one disk from another and is also written to the disk being catalogued as a page length file with the identifier in all caps. This is a useful feature, as even if the disk label falls off or otherwise becomes unreadable, checking a list on the disk will show the identifier listed in the directory. Index II then scans the directory of the disk and places all the entries found

into the Index data file. This procedure is repeated for all the disks to be catalogued.

## MAKING A DISK CATALOGUE

My test run used 30 of the 5" disks which were all pretty full. This produced a hefty 1000 data file with some 4,000 entries in it. Initially the entries in this file are unsorted, being only in disk order. A sort option on the main menu is provided for sort the data file into alphabetical order. This sort routine took a few minutes to sort the file but in fairness, it was probably a lot longer than the file most users are likely to generate.

Viewing the file in its sorted form immediately showed that my 5" archive disks contain many unnecessarily duplicated files. A few items that I thought had been lost for good were also found, tucked away in some obscure part also (Fig 1). The display of the sorted state of the files proved useful as some of the files, which were apparently just duplicates, showed up with different record sizes indicating that some investigation would be needed before erasing them as backups of backups.

The catalogue also shows the attributes of the files, whether read/write, read-only, system etc. Once the catalogue has been created and sorted, extensive search and display options are available using an extended version of CP/M's wildcard plus search by disk identifier, file size, user number etc. All this makes it very easy to find which disk that elusive lost file is on.

Having created the catalogue, you're likely to find that some of those duplicated and unwanted files which could be erased to recover some valuable disk space, it would be rather a tedious job to go through all the disks trying to find for each an assumed file, and to handle this problem there is an optional add-on for Index II called File-

virtually located there in the highest available area. That's not the last you will ever see of it until you make one of the ROMs by using the standard I command.

The documentation deals with each ROM in turn. Each command is explained and then demonstrated by the use of example programs which can be loaded in from the tape. The first command explained deals with loading the program image to one of the RAM banks and calling it back again. A very simple operation which is extended to do the same for windows. Under normal circumstances Amstrad windows would collapse the first they covered. **WINDOW** will save a window which can be recalled with its opposite. Windows manipulated using these commands will not destroy the text they cover.

The **EDIT** and **EDIT** commands can be used for editing an area. The data from this is moved around by the commands **MOVE** and **LOAD**. The documentation explains all great

## CP/M AND COMMERCIAL APPLICATIONS

We have received a great number of phone calls concerning the suitability of a ROM or ROM equipped with a RAM board for running commercial CP/M software. This is a bit of a tough one though.

Although the memory can be made to act like a 6128, one of the firmware options. Some programs may attempt to format the ROM type before they load. CP/M plus will report that it cannot run in that environment if it finds anything other than a 6128 ROM. Although I've been managed to get around that particular call by providing an emulate command (see my last column) even some CP/M programs make firmware calls that strictly speaking, they shouldn't.

OK Tronics have tested some of the more popular applications such as the new target Tassco and Masterfile, and have found them to work. This has been my

length how you should go about dealing with commercial arrays, a classical way of presenting you for the more complicated multi-dimensional and string arrays.

## PICTURES AND GRAPHICS

As stated before, the bank memory is ideal for storing away the vast amount of data the Amstrad needs to build up a screen picture. The three commands **BCW**, **BCDR** and **BCSRP** allow whole screens to be moved from memory and displayed instantly. While one screen is being displayed, the background screen can be seen in ROM disk memory loaded to disk. With a bit of imagination the window commands could be used to create small moving graphics (graphics that need not corrupt the background when they are removed from one position to the next).

The more adventurous among us will want to experiment with the possibilities that the memory boards offer for programming at higher levels. Examples there are special **PICT** and **PICTB** which can examine and write value in any of the banks. For the really cool students who understand machine code programming OK have not forgotten you. They have included an extensive section detailing how to use the memory banks without using ROMs.

own experience. I want a bit further and decided that I would like to try Tronics's Supertronic. This is a memory hungry word processor that wouldn't even look at a TPA of less than 80K. The short answer is that although I could get CP/M plus to boot up into the 666 and the 664, only the 664 would run Supertronic. Even then only for a short time before it turned nasty. Now that does not mean that CP/M plus will not run, far from it, I haven't found a utility yet that doesn't and Supertronic seemed pretty happy when I tried it. The problem is going to be knowing which programs you should try and which to avoid.

Seeing in which the number of people who have been out and bought CP/M plus to use on their new configurations it would seem sensible that we should draw on our readers' combined experiences. Let us know at Amstrad about your successes and your failures, so that we can send a list of software which is likely to cause problems and that which is not. This applies equally to games software if and when it becomes available purely for the 6128. After all, I can't see how this sort of a list of readers will seem to anyone else. I don't think so, so we will try to keep you informed about any potential problem areas if the crop up.

Prices: 64K £49.95 and 256K £99.95

# LOOKING AT TOOLKIT ROMS

Tea drinking is a draining task, so between cups, there's nothing better than GARY LIDDON enjoys than taking apart a Toolkit ROM—especially if it's Utopia.

This Christmas sees many companies jumping on the ROMboard wagon in an attempt to part hard-wired systems from the transient market. Increasingly popular among many firmware manufacturers at the moment are the ROMs adding extensions to the already covered Utopia-based BASIC resident within your Amstrad. These such ROMs have greatly benefited their way into my desk over the last months or so, all trying to achieve similar goals. They are Amstrad's Utopia, Tronics's Toolkit and Supertronic's Programmer's Toolkit. Though priced over quite a wide range, what you actually get for your money varies quite a lot.

The cheapest fare, Toolkit at £29.95 and Tronics at £39.95, come as EPROMs with no method of attaching them to your machine supplied. Admittedly, anyone likely to buy such a ROM is likely to already have purchased an external ROM-board but the user is likely to be enough to do without one. In fact, the extra hardware to plug the chips into your computer will cost anywhere between £60 and £100. Amstrad's Utopia, however, comes supplied with the small board that the user needs to attach the Amstrad's casing. Despite the slightly higher price of £43.95, Amstrad's offering probably rates out the best value because of its included ROMboard and fitting instructions.

All these pieces of firmware are 128K long and work in a similar way. Each one is a background ROM. Generally this means that they perform services for foreground ROMs such as BASIC. When any of the ROMs are activated they don't take full control of the machine but just perform a function and the return control to the foreground ROM that asked for the command.

Upon power to each individual ROM contains listed in the system and built around any extra functions it's willing to perform. The extensions are known as resident system extensions (RSEs) and are accessed by typing the bar character (|) and the command you want to access. As this method is somewhat limited, each ROM is interrogated to see whether it possesses the command needed and if it does then the ROM performs the function asked and then returns control to BASIC. However, in two ROMs told a command of the

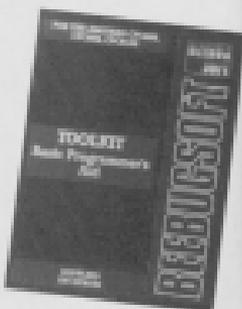

same name, the first ROM to be interrogated will perform the function, the ROM in the lowest numbered ROM bank.

This month, let's take a detailed look at Amstrad's Utopia.

Utopia supplies an extra of 40 commands to the ROM. As a command of 40, it also provides the extra 40 programs the function keys to handy commands when used in conjunction with the CTRL key. 12 of Utopia's extensions are of a slightly lesser nature, so they're a bit of a cheat for the rest of us. If a concrete based machine is used to do something with a disk drive that's not connected then the ROM offers an "MMSDOS" (not initialised error message).

The disk commands added are very powerful. In fact, if you add a disk drive to the system, the editor is even supplied allowing the user complete control over an Amstrad disk drive. The annoying original bug in the ROM and BSA Commands in the ROM have been corrected. Now you can type in a file name and it will search the file name into a string and then passing the string to the command. The command will still work with the old method, so as to maintain upwards compatibility with other programs. If you need Utopia to interpret the MMSDOS commands then it's necessary to fit Utopia into a larger priority socket than the disk ROM which allows itself an earlier T. The other disk commands are equally handy. Indeed, **WFD** gives details of any disk unit and its own address. Also included is a disk formatter and a disk backup function. All functions that should have been included in MMSDOS.

Utopia takes 256 bytes in register memory for windows and some games which run via a serial. For some ROMs this would mean having to play-

ally disconnected them from the machine in order to get some software running. UTOPIA, however, offers a much more elegant solution by supplying a **REBOOT** command which gives one or all the extension ROMs present to be switched out.

For the BASIC programmer many extra functions are provided to make the creation of programs a bit less of a painful experience. Most of the extra commands become especially useful once you start debugging a finished program. A macro-signature which writing pretty BASIC programs is the task of keeping identical all the various variables being used. UTOPIA can dump out all the currently defined variables, detailing their names and values. Find and replace functions are also included for use on your BASIC text allowing specific strings to be found and replaced with a substitute string. When you're running short of memory and a few more bytes would help so and it's often necessary efficient to toggle loop variable names with a one-line equisubstitution. Though the resulting program is a little less readable, UTOPIA should be able to shorten a majority of BASIC programs

with little difficulty.

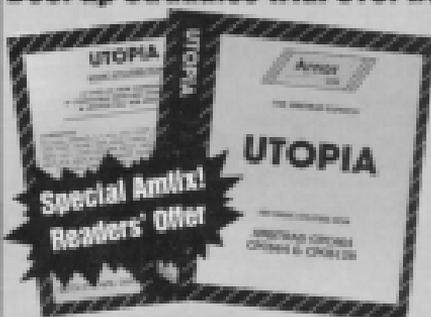

If you know a bit about the machine and possess some sort of Assembly specification with UTOPIA it's possible to utilize all the jump block commands with the extended **CALL** command. UTOPIA's version of call allows the 255 internal registers to be set before the call is performed, it also means that interleaving your own machine code routines with BASIC is a lot easier.

For the more advanced user who maybe starting to dabble in machine code, a primary utility is supplied. Though not quite a full assembler, the editor provides many handy functions that should be of use to even the most trivial of code programmers.

UTOPIA seems to be in a class of its own among the three ROMs and it seems to be aimed mainly at the experienced Amstrad owner who perhaps dabbles in machine code. The extensions provided are extremely handy, indeed, the most welcome being the juggling up of Amstrad's disk commands.

Next month, we'll take a look at *Toolkit by Bestsoft*, and *Programmer's Toolkit by Super Power*.

## Beef up Straddles with UTOPIA

Those nice men who brought us **PROTEXT** have made their latest product available exclusively to the readers of **AMTIX!**

What is **UTOPIA!** Well it's a state with perfect political and social conditions and — a basic toolkit ROM. The ROM contains a library of useful sub-routines which can be invoked directly with a single external command. Most of the routines are designed to be used from BASIC and make a programmer's life a lot easier. Imagine the convenience of getting a graphics or text screen dump without having to load a program in, just a simple **TEXT** command. Besides the commands to help you write your own programs the ROM also has a large number of file commands so you don't have to keep loading in your system disk to perform such mundane operations as **FORMAT**. Powerful commands enable the user to juggle around bits of memory with ease.

Apart from having your own **UTOPIA** the only other thing you need is a way of plugging it into your Amstrad. No problem. The price includes the Amstrad single ROM board which can be loaded discreetly inside your computer without you even having to take a screwdriver to the thing. Although the ROM is compatible with the 464, 664 and 8128 the board is not, so please let Auntie Aggie in mail order know what type of Straddles you live with. Apart from that the only other requirement is that you should part with a bit of cash (and a cheque or postal order would be better). All we ask is a mere £42.50 and that includes the normal natter such as VAT, postage and packing.

I enclose a Cheque/Postal order for £42.50 made payable to 'Newfield Ltd'.

Please send my **UTOPIA** and ROM board to:

## ● DRAUGHTSMAN ●

Computer Graphics,  
\$19.95 case, \$24.95 disk

With most software houses following the current trend of MULTIPANT facilities, it is more to use Computer Graphics adopt a different approach to the problem of creating a user-friendly graphics package. **DRAUGHTSMAN** is a drawing utility that makes full use of the function

key system, which may require a longer introduction period, but once mastered, provides a very fast and efficient way of accessing a multitude of functions and drawing routines without the physical effort of drawing lines and roll-over menu options.

The function keys are normally associated in the lower screen area and can thus be allocated differently in the various program sequences. Computer Graphics have opted for a keyboard overlay, which saves

screen space — their overlay is placed over the various menu slots leaving the **Drawal** flag.

The program can be loaded from side 4 of the tape at speed write 1 (2000 baud) or, if problems are encountered, from side 8 at speed write 0 (1000 baud). Once running, one of three graphics modes must be selected, otherwise the program displays the default colour. At this point these may be rejected and a new one chosen from the displayed list of available colour options. This leads on to the main program menu with four possible choices: 1) Designing a symbol, 2) Loading

symbols, 3) Load a drawing program and 4) Cataloguing for disk use only.

Option 1 covers multi-character symbols to be created. The width and height may be entered, upon which the program displays the drawing grid of selected height and width of 8 x 8 pixels/drawers. The cursor key or joystick moves the drawing cursor with the COPY key or joystick FIRE 1 setting as pixel set or reset switch. Once completed, pressing TAB scans the symbol grid character by character and the symbol is displayed in inverted size mode 11 in the bottom right corner. The symbol may be modified, or if satisfactory, stored in memory. The symbol will be assigned to a key and further symbols may be designed and allocated. The program displays the amount of this symbol, left and also how many more symbols can still be assigned. The symbols can then be saved to tape or disk.

Option 2 reloads previously saved symbols, while selecting the **Draw** option initiates the loading of the drawing. The drawing screen consists of a frame and an information read-out line at the top of the screen. This displays a constant update of the x,y coordinates, the current linear distance from the last fix position, a status window showing the current drawing colour and the function selected, the coordinates of the last fix position and the speed of the cursor (1 slow, 2 medium and 3 fast). In the centre of the screen is a flashing crosshair cursor, which can be moved using the cursor keys or the joystick. The COPY key sets the cursor speed consecutively. The screen can be cleared by pressing CTRL TAB (twice), by the regulated use of the F key, the drawing colour may be changed sequentially, thus providing access to all the available colours of the selected drawing mode.

**Key 1** or FIRE 1 sets the fix position—the current cursor position—and is indicated with the new x,y readout and area distance indication. Moving the cursor changes the distance readout. **Key 2** or FIRE 2 draws a line from the current cursor to the fix point.

**Key 3** provides the circle function with the cursor as centre. The program prompts for the radius, then for DASH or LINE before drawing the appropriate circle. Pressing SHIFT 3 without having moved the cursor erases the circle, but retains the radius and line information, so that if no new value is entered, the original circle will be redrawn.

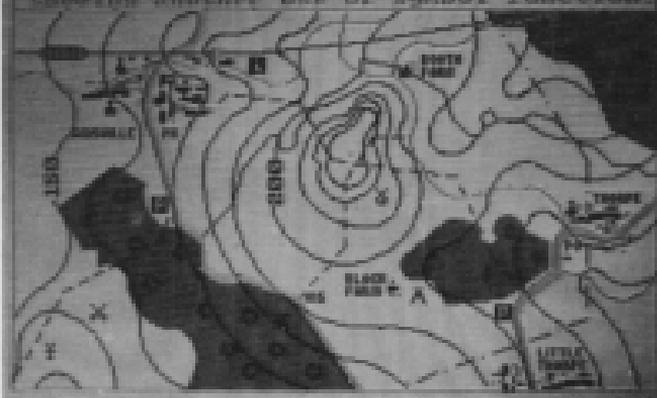

**Key 4** takes the ellipse function. Prompts are required for x and y axis, the rotational start angle and position (0 and 360 for a full rotation) and DASH or LINE. Again, SHIFT 4 erases the drawn ellipse and prompts for new entries.

**Key 5** is the key to the polygon function. Prompts for radius,

Example of the type of solid rendering possible with 'DRAUGHTSMAN'

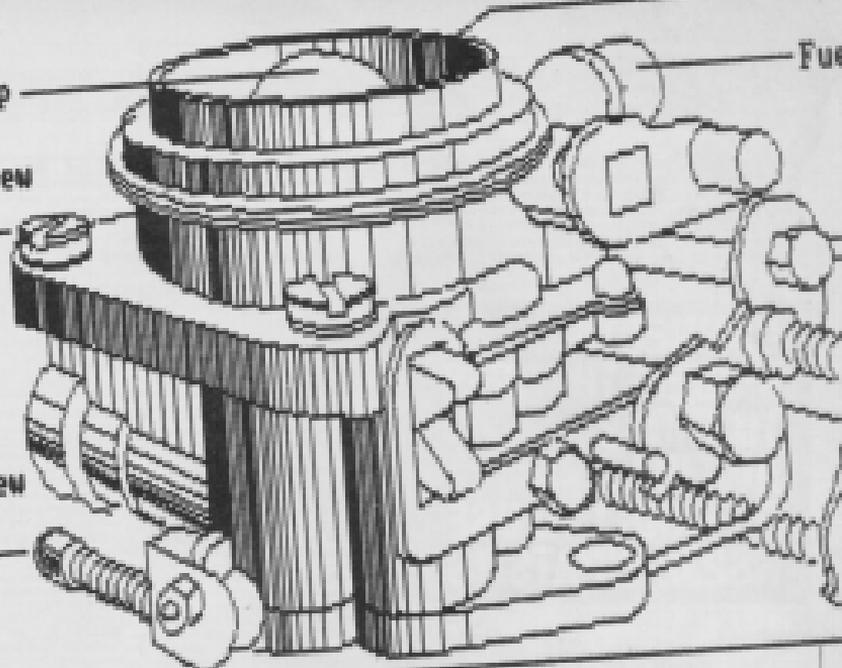

Section of an Ordnance survey map showing another use of symbol function.

hike flap

cover screw

Throttle stop screw

number of sides, rotational start position and line type (DASH or IML) are given.

**Key 8** calls the arc function. Key 1 (display start screen) position and the third point defining the curvature of the arc. Again there is the choice of DASH or IML.

**SHIFT 3** provides dot-dash lines and works in exactly the same way as the Key 7 line function.

**SHIFT 7** contains a rubber. A flashing X appears and rubs out a pixel at a time. By pressing SPACE BAR the X can be moved into a square of four character spaces, which is useful for moving larger screen areas. Pressing SPACE BAR again clears the X and pressing SHIFT 7 terminates the rubber function.

**SHIFT 9** is the hatching function. Choices are provided for slope angles of 45 or 60 degrees up or down and horizontal and vertical. All hatching occurs from left to right except vertical which occurs from the bottom upwards. After selecting the option, pressing the SPACE BAR causes the first hatched line to be drawn. Further hatch lines appear by moving the cursor while holding the SPACE BAR. The spacing can be altered by changing the cursor speed. Pressing SHIFT 7 terminates the hatching function.

**SHIFT 4** triggers the fill function. On the 484 version the filling process can be aban-

ded by pressing the ESCAPE key twice.

**SHIFT 11/12/13/14** provides the text entry mode. Normal text editing is allowed and entry is terminated with the SHIFT 8 key, which sends the text at the current cursor position. Using the cursor keys or joystick the text may be moved around on the screen until it is fixed by pressing SHIFT 11/12/13/14 again.

**11/12/13/14** calls the symbol function. Pressing the key to which a particular symbol is assigned causes the symbol to be printed at the cursor position. Again, similar to normal text, this may be positioned and fixed by pressing 11/12/13/14 again.

**11/12/13/14/15** provides two perspective drawing techniques, with one or two vanishing points.

**Key 6** provides the two point perspective and pressing this key displays the horizon which can be moved up or down and fixed with COPY. Next follows the prompt for the X coordinate of the leftmost vanishing point. If no value is entered, it is set to 0, which is the left edge of the screen. Then follows the prompt for the right hand vanishing point. (Default is 640 right edge of the screen). The horizon disappears and by pressing Key 7 a rubber band will be drawn from the leftmost vanishing point to a new template cursor and to the right hand vanishing point. This cursor can be moved around using SHIFT cursor keys. The normal cursor is still operational and can now be used to fix

and draw lines using the rubber band as a guide for the vanishing lines.

**Key 5** accesses single point perspective, which operates in a similar manner. The vanishing point is positioned with the cursor keys and fixed by pressing 5. A line will be drawn from the edge of the screen to the vanishing point. This line can be rotated clockwise and anticlockwise using SHIFT right and SHIFT left cursor keys. Normal drawing mode is recalled again by pressing Key 8.

Further assistance in perspective drawing is provided with the DEPTH function. Pressing SHIFT 6 causes a set of lines indicating equal distances to be drawn, reading towards the horizon. These can be rotated by holding the amount of line-shifting that occurs as objects become more distant. Pressing SHIFT 5 again restores them.

**CTRL 8** initiates screen save. The redout box clears and the function catalogue is displayed in the usual manner. But will obviously display the current screen as soon as it is accessed with a SHIFT 8. Pressing the ESCAPE key leaves the drawing mode. **CTRL 9** initiates the user function. Once completely loaded, the program 'thru' to display the entire screen onto the SPACE BAR recalls the information needed.

The DELETE key can turn the redout display on or off, it is not doing so speeds up the cursor movement, since there is no delay in updating the information display.

The CLR key restores the program right from the begin, though the saved design features will not be accessible any more. Any stored symbols will be lost. **11/12/13/14/15** works in conjunction with TAB/DUP, so that whenever CTRL 8 is entered in this mode program, the current screen will be dumped to the printer.

**11/12/13/14/15** is a curious graphics utility. Designed primarily for technical drawings, it still proves to be a good all rounder despite a certain lack of elegance in presentation. The function key system is still a strong favourite when compared to the alphanumeric system — anyone having worked with icons and rubber bands will agree that nothing could be more laborious to operate. 80 drawings are greatly helped with the use of vanishing point line guides.

On the more negative side, criticism could be made about the sluggish response, which is largely due to the strong BASIC content of the program. Also it would have been best to have had the function keys displayed on the screen rather than with a separate recall, although this would have put into the drawing area, getting used to the controls is no problem thanks to a good introductory manual. What the program definitely fails to do is state functions such as a space-bar, screen filling and other screen functions — but then this isn't necessarily required for the more technical drawings.

Francis Frey

The new revolution in communications is now beginning to test the lead laying power of the Straddlers' owner. If you want to get out and about but keep getting your wires crossed — you're in luck. This month AMTIX takes the guess work out of connecting modems by outlining how three popular models can be used with Amstrad RS232C interfaces in

## CONNECTING MODEM THINGS TO THOSE AWFULLY DIFFICULT TO USE RS232C WHATSITS

### Serial Interfaces

There are two fully Amstrad compatible serial interfaces, the Amstrad RS232C and the HoneySoft HS-810, both of which have similar connections

as shown in table 1. For both interfaces, the flow control signals are equivalent, and the connection diagrams to be detailed below assumes one of these interfaces is being used.

Table 1 - RS232C Signals

Pin	Function
1	Ground
2	Receive Data (pin 2)
3	Transmit Data (pin 3)
4	RTS (Request to send)
5	CTS (Clear to send)
6	DSR (Data Set Ready)
7	Data Terminal Ready

### The W2000

The W2000 from Miniside Technology is the only modern to utilize a 25-pin RS232C connector. Although there are several handshaking lines available, not all need to be connected for the modem to operate correctly.

For both the Amstrad and HoneySoft interfaces, transmit data on the modem should be connected to receive data on the interface. Likewise with receive data, the W2000 uses the RTS line to control the direction of transmission. It should be 'true' for the modem to transmit data, but may be at any level if receive. As the levels are at RS232C levels, 'true' corresponds to a positive voltage level. The default level for this pin is 'true' unless if the modem is to be used normally for reception (as in most cases) then this need not be connected at all.

If, however, the software being used supports line switching between transmit and receive mode, then this should

be connected to the RTS line on the serial interface. This is the case when using the HoneySoft API file transfer technique. The DTR is used as a 'hold off' line for powering up, telephones obtain permission. This should be taken 'false' (low) whenever the operating mode is changed, as whenever the mode switch is used to select a different baud rate. Unlike the Amstrad software nor the HoneySoft supports this feature, and so the modem must be powered down at the ready and then switched on again whenever the mode is changed, or the RS232C channel is closed, and then re-opening using the HS-8 commands. The CTS line should be held 'true' for normal operation otherwise the modem will be permanently in a re-set state. Since the default condition for this pin is 'true' there is no need to connect this to the interface.

The remaining connections are not required for the W2000 as it operates correctly, however the interface must be configured to ensure that all hardware

handshaking is effectively disabled. The HoneySoft interface assumes this automatically, and so it does not require any further connections in order for the Amstrad

interface to function correctly. It must have CTS and DCD set 'true'. This can be achieved by connecting pins 4, 5 and 6 together.

### W2000

Transmit data pin 3  
Receive data pin 2  
Ground pin 1

HS-8 pins

### RS232C Interface

Transmit data pin 3  
Receive data pin 2  
Ground pin 1

HS pins, W2000  
Amstrad interface only

HS and DCD pins 4 & 5 together if W2000 RS232C used with flow control

### Flow Control

Flow control is primarily used to tell one end of a data line to stop sending, in order to prevent characters from being lost. There are two types of flow control; namely hand or soft. Hardware flow control uses RS232C signals such as CTS and DTR to manage data flow, but since RS232C signals cannot be used over telephone lines, software flow control is often used instead. Software flow control uses characters which have a special meaning to each end. The character 'SOFF' is normally sent by the receiving end, to stop the transmitter temporarily, until an 'SON' is sent. This type of software flow control is known as XON/XOFF. In order to use software flow

control the hardware signals need to be disabled. This is done by making the output signals (RTS, DTR) assume a true state, and by ignoring the input signals (CTS, DSR) completely. There are commands with the set of interfaces to do this, but unfortunately the modem will expect some hardware signals to control their functions. For instance, modems have a carrier detect input to prevent spurious characters being received by the modem until a connection has been established. If hardware flow control is disabled, then this will be ignored, so there is little point in providing it in the first place! It is recommended that hardware flow control is used, with the connections detailed below.

### The F400 Nightingale

This modem was originally aimed at the BBC market, so naturally it has a BBC compatible 9-pin DIN socket for connections to the outside world.

There are two BBC compatible flow control signals, CTS and RTS, as well as the data and

ground signals to connect.

These should be connected directly to their RS232C counterparts, as below.

If the request to send signal to the Nightingale is made 'false', it will release the line, if held, even if the Nightingale's online switch is on.

### NIGHTINGALE RS232C

Data into modem (pin 2)  
Data out of modem (pin 3)  
RTS (Request to send) (pin 4)  
CTS (Clear to send) (pin 5)  
Ground (pin 1)

Transmit data (pin 3)  
Receive data (pin 2)  
RTS (pin 4)  
CTS (pin 5)  
Ground (pin 1)  
Flow control (pin 4 & 5 to RTS pin 2)

### HS-8 Interface HS-8

This modem uses a 9-pin DIN connector, with yet another pin out. Two flow control signals, RTS and DCD, have been provided. The DCD output line is true when the modem is online and a carrier has been detected, as shown by the red and yellow indicators on the front panel.

The RTS input line is used for switching between transmit and receive mode, using line handshaking techniques. Naturally this should be connected to RTS at the RS232C interface, but if the software in use does not support full duplex operation this should be connected to ground. This will usually be the case.

### Datanet 1220

Transmit data pin 3  
Receive data pin 2  
RTS (Request to send) pin 4  
CTS (Clear to send) pin 5  
RTS/CTS (Data pin 1)

### RS232C Interface

Transmit data (pin 3)  
Receive data (pin 2)

# PROTEXT

**FOR AMSTRAD**  
**464/664, 6128**

## THE ULTIMATE AMSTRAD WORD PROCESSOR!!

**PROTEXT** is without doubt the most sophisticated word processor you will find on any home micro. It is of comparable standard to business packages costing over £200 but has been developed for the AMSTRAD 464, 664 and 6128 machines and is 100% machine-code. We know that **PROTEXT** is the fastest program of its type currently available (eg global search and replace on a three page file in under a second!). Bearing in mind the range of features included and their ease of use, this package is rightly acclaimed as the No. 1 word processor for Amstrad owners. Compare these features and benchmarks with any other similar products.

### PROTEXT FEATURE SUMMARY

**File commands** - Super-fast Load, Merge and Save Cmd. Print to printer/screen/file. **Cursor Movement** - 36 possible (row/3/through page/vertical, to start/end of line, start/end of text, to line number, to stable marker, to margin).

**Inserting and deleting** - INSERT/overwrite mode, insert character or line, delete character forwards or backwards, delete word.

**Find and REPLACE** - forwards, all or part of text, case specific, whole word or part of word, full control codes.

**Block commands** - Move/copy/delete/insert/print/format.

**Markers** - 2 block markers and 16 grid markers may be set anywhere.

**Formatting** - Word wrap, right justify, variable left and right margins.

**Page lines** - Unlimited number of run lines to define margins and tabs.

**Print options** - Headers/footers, page numbers, variable line spacing, variable page length and margin size, conditional page flows, odd and even page features, continuous or single sheets, multiple copies.

**Printer features** - Including enhanced, condensed double strike, alpha, numeric, underlined plus P.O. subscript, equipment, underline. Built in 8-page printer driver. Ability to easily define your own printer driver and save to disk.

**Help features** - On-line or screen command summaries.

**Soft to character sets** - Spanish/French/Italian/German/Dutch.

**Other features** - Full screen access, display font, forward and home spaces, soft hyphens, word count, case conversion, copy paste. 40 page easy to read manual with full index and glossary of terms.

### BENCHMARKS

A standard file of 775 words (4,785 characters) was used to carry out the following benchmarks (all timings are in seconds):

	PROTEXT	WordStar/WordPerfect
1. 1000 words	4.7	10.1
2. 1000 words	4.0	10.1
3. 10000 characters (30 words)	3.4	10.1
4. 100000 characters	1.5	100/seconds
5. Word search in 1000 words	1.7	1.1
6. Word search in 10000 words	1.4	1.1
7. REPLACE 1000 words (30 characters)	1.1	24.1
8. 1000 words	1.1	1.1
9. 10000 characters in file	1.4	10/seconds
10. 10000 characters in file	1.0	11.4
11. 10000 characters in file	1.7	10.1
12. 100000 words (30000 characters)	11.0	11.0

**"I AM STUNNED AT PROTEXT ... KNOCKS POCKET WORDSTAR INTO A COCKED HAT" - AMTIX ISSUE 1**

### MAXAM

Now recognised as the industry standard assembler monitor editor. Used by all the leading software houses, computer magazines and widely used throughout industry.

"This piece of software should be held up as an example of what can be done by programmers who care. It is brilliant!"

ELECTRONICS COMPUTING

**MAXAM** is a superb ROM which is recommended for all serious machine code programmers. It contains a powerful assembler and an excellent editor which is a joy to use.

COMPUTED BY THE AMSTRAD

**MAXAM** are to be congratulated on a superb job ... definitely the best."

HOME COMPUTING WEEKLY

"A product no serious Amstrad user can afford to be without."

YOUR COMPUTER

Why make machine-code difficult?

Why use anything less than **MAXAM**?

**ALL ENGS**  
**01-888 8233**

### UTOPIA

**UTILITY SOFTWARE ON ROM - OVER 40 NEW COMMANDS**

By the author of Beeblog's BBC Tester, **UTOPIA** is an indispensable tool for the Amstrad user. The ROM contains a library of over 40 powerful commands, all available instantly from BASIC, **PROTEXT** or **MAXAM**. ACCESS ALWAYS C CALL CUT COPY DEST DELETE DISCOPY DOSTEST DUMP END FILE FROM THE ROMS (HELP) INFO INFO LIST INFO MOVEP REPEAT MOVE PRINTOFF PRINTON FILE REPLACE REPEATS REVERSE REVERSE(BA) SAVE SPOOL SPOOLOFF SPOOLS TENDING THE U WARE VERIFY VTEXT XROM

**JUST £17.95 AND OVER**  
The inexpensive introduction to the Arnor professional software.

**ROM**  
For those people who already get a rom expansion box, just plug in a rom and off you go. Amstrad roms are compatible with all other rom boxes.  
**£29.95 ONLY**

### ROMS TO CARTRIDGE (ARE)

Complete Plug-in cartridge ROM cartridge containing either **PROTEXT** or **MAXAM** (NO ROM BOXES REQUIRED) of 400000, the cartridge has a thorough connector for further peripherals and an extra socket for expanding the system with our own 4 way rom board. The ARE cartridge plugs directly into the ARE, 16K or 64K, fitting properly into the expansion port through the ARE. The cartridge means that even once you switch your Amstrad computer on, **PROTEXT** is instantly ready and waiting for you to use.

Consider the price of our cartridge system. JUST 17.95 plus the price of the rom software and its extra hardware required. Why pay twice as much to get started?

ADD cartridge **PROTEXT** or **MAXAM** with no extra hardware required **£29.95**  
or any ROM-CARD (plug-in cartridge) **£29.95**

**MAXAM** ROM and cartridge software gives you a massive 60K text space!  
Only use Whitespace and Editing. Don't waste it. Protect your.

**24 HOUR CREDIT CARD HOTLINE - ACCESS/WISA**

## COMMS ON THE CHEAP

## Acoustic Modems from Circuit Holdings

The ever growing number of bulletin boards and their continuing expansion of services such as Microsoft is a direct result of the expanding interest being shown in computer communications. This is not surprising when you consider the huge range of interesting material being held on other people's computers just waiting to be pumped down the phone lines and pop up on your screen. However, many people people resist the temptation to join the border territories of the computer net. The hardware costs can be pretty daunting, after all you need not only a modem but an interface and software to boot, that could set you back nearly 1750. Circuit Holdings may have come up with an answer. Their modern line files software package costs a mere £30.

Some of you may remember a company called Prestel. Until early this year Prestel marketed a cheap acoustic modem for the Acornbus, Commodore and — really enough — Amstrad. Sadly Prestel went out of business leaving Circuit, the manufacturers of the hardware, with a cupboard full of the things. Being pretty cheap cheap Circuit contacted Honeywell to write the software and they set out into the market place once again.

Acoustic modems have no physical connection into the phone system, instead the phone's handset is stuffed into a pair of rubber sockets and communication effected by sound alone. The bonus, from the supplier's point of view is that such a modem easily qualifies for the green tick, the Telecom-mark of approval. From the users' point of view they are not as loud as a direct wired modem, useful for "outside" noise and they do rely on your phone fitting into the receptacles. It also have a very flash phone with triangular ear and mouth pieces than what you have got in a Problem.

## FITTING IT ALL TOGETHER

The first trick is to make sure that the two sets of required batteries are installed and sufficient. Pushing the phone into place is easy enough, except that I put it in upside down. Putting the interface to the back of Socrates is a pinch I was surprised to see that not only did the interface bear the words, "This way up" but it also had a location key. The next stage is to load the software.

The interface menu offers five options: **Print list, terminal, receive file, send file and exit.** Selecting **Printlist** takes you into another menu which offers **Printlist in mode 0 or 1.** Two other options facilitate page setting or loading. The final option simply reminds you to the root menu. **Print mode 0** permits the display of eight colours together with double height and flashing characters. Mode one is the four colour mode but a further four colours are made available by a process called **tripling** which simply means that two colours are blended together to form to produce another. Mode 1 does not allow flashing characters. Some **Printlist** pages have hidden characters for your added fun and delight. Pressing the **COPY** key toggles between **visual** and **text**. For convenience the much used **Printlist** instructions, **list** and **back**, have been assigned to the

Decimal Point and Enter keys. As each page is received from **Printlist** it's loaded into a buffer so you can flick between screen modes without losing the current page. The current page can be saved onto disk under a selected file name and later loaded back for viewing or printing.

The **Terminal** menu (second main option) offers some pre-defined configurations for **Telecom Data, Espritnet** and **Bulletin boards** running at 1200/75 baud, and user-defined parameters are also allowed. A full range of parameters are provided but not all of them can be used with the acoustic modem. For example, the baud rate 300/300 is offered but only 1200/75 and 3000/1500 baud can be handled by the modem.

The software makes provision for the transfer of files, including ASCII formatted programs, over the phone line. The data is transferred using automatic request request. If any data is found to be corrupted then the receiving terminal asks for it to be sent again, and again. After five attempts it gives up. This is a reliable system and users should have few problems except when in a noisy environment or using a very poor phone line. (Whereas it's always a good idea to keep an eye on the batteries. The software supports users a series of **RAC**'s which can be loaded and used in users' own programs. You could write a personalised file transfer program without any further handily and only a little imagination.

In a similar way, the interface can be used to drive other **RS232** devices, such as printers, plotters or even directly con-

ected to another computer. The software and hardware are fully documented. The documentation supplied is on tape and could be read on screen or printed out.

## UNCOMPROMISING VALUE

As a package the Circuit Prestel Line is very good value for money. Not only do you get a modem which lets you talk to everything but the 386/385 class, but you also get an interface that can be used for a variety of applications. Using the interface to drive a printer is simply transfer files from your computer to another is made easy because you can use the software's direct or "pull" out the **PRG**'s and get those on their own. The technical documentation deals with every aspect of the hardware and software, but it is, however, a little difficult to follow. The general instructions, running to five A4 sheets, are clear and understandable. With regard to the performance of the modem itself I can find few faults, it does not like the display in mode 1 but mode 0 is fine, excepting that some of the characters are a little difficult to distinguish — 8 and 0 for example. It would have been useful to have had a point function on the menu. The only way to obtain hard copy is to save the screen and afterwards load it back and dump. It with a screen dump routine. However users will be able to upgrade the software support by adding a text dump function as well as the capacity to download test software. The interface is not compatible with **CPM** but that is unlikely to cause any great concern.

Generally I dislike acoustic modems but not for any valid reason. They are functional and, so long as they are used in a quiet environment, reliable. If you fancy a fiddle into the world of communications you should think long and hard before giving out more than the asking price for this package.

# .!You, The Law and Straddles

There you are, snuggled up for the night in front of your beloved computer, confident that, for the moment at least, you and Straddles are safe from the ravages of the EEC. **Donning his curly wig and gloves out, JEREMY SPENCER peeks into the fun and games devised by Congress to protect us from none other than ourselves and our secret databases...**

## Wrong!

You are sitting in some club, such as *Brooklyn* is a document known as the Council of Europe Convention for the Protection of Individuals. The US placed its own print on this document some time ago, but it is to enable for some of its rules that legislation will be necessary. On the 13th of July, 1984 the Data Protection Act (hereinafter referred to as the Act) shuffled its way onto the statute books.

The Act was designed to set up the necessary machinery to afford individuals some legal rights with regard to personal information. It is the belief that many financial firms may keep some sort of electronic database, either for private or professional use, it seems like a good idea to let some pointers as to how the Act may affect you.

### Act I Scene I

Impossible as well to define what the Act has in mind when it refers to Personal Data. It defines such information as that relating to living individuals by feeling (the latter of opinion) but excluding any indication of the wishes of the Data User. It does not apply to information kept on companies or associations. The Act lovingly refers to individuals as Data Subjects.

The general attitude of the Act is that everybody who uses a computer, or some electronic means to manipulate Personal Data should register. Plain. Well the idea is that it is better to register even if there's no need rather than risk having your financial unit to jail. However there are a number of exceptions the most important one being Personal data held by an individual (written only) in the management of his personal family or household affairs or held by him for occupational purposes. That provision excludes the free accounts of a private individual might maintain a database. An example would be using a computer to keep an address book. However, it does not exclude the idea of a researcher who might keep people

records on his home computer. Another common home computer application is the keeping of records for clubs or societies. That use is not exempt from registration under the above provision either. Instead that sort of application is Conditionally Exempt, this area of the Act is a real beauty of language.

- 1. Where data used relates to the calculation of payment or pensions in respect of employment.
- 2. Keeping accounts of financial dealings for the purpose of ensuring that payments and receipts are recorded. That information can also be used for producing management accounts for use in the business or activity.
- 3. Data held by unincorporated members' clubs and relating only to club members.
- 4. Data held for the distribution of articles or information to the Data Subjects but consisting of the names and addresses and other information necessary for the distribution.

Well that would seem to relieve quite a few from the pains of registration but before you breath a sigh of relief there are a few catches. These Conditional Exemptions apply so long as the data is used as described above. In the case of the payroll you must not store that information except in limited circumstances, such as for the purpose of an audit or for research into occupational diseases. If the information is to be used for purposes other than those allowed by the act, then registration will be required. Point 3 and 4 are tempered by what seems to be a catch-all requirement. That is that these applications are only exempt if they object to their being on your data base. None of the Data Subjects do object then you must register. That registration is going to mean going a little further. Take as an example the list of subscribers held on our computer. That data base is exempt under point 4 but only if we inform all of the subscribers and do not receive any objections. A club or society has a similar restriction. In most cases a simple course of action would be to register.

### What is it all going to do?

To be honest the Act tends to be very vague, which may explain the Registrar's preference for people registering even if there is some reason why they may not have to. What really counts will be their rights that can be an art because an individual has even that even if some goods defined in a contract, the Act does claim that an individual has the right to ask for Data Users to confirm that he is a Data Subject on that User's database, and if so that the Data Subject can ask for a copy of the Personal Data. The Act also bestows on an individual the right to seek correction if a Data Subject suffers as a result of the disclosure of the data without his authority or if the data is inaccurate. A court can also order correction or erasure of offending data.

There are a great many restrictions on the range of data that an individual can demand that the Data Subject use for the duration of time is exempt from subject's consent, but only so long as the loss of said data could reasonably be said to hinder the purpose for which it is kept. Another problem area concerns exactly what type of data falls under the scope of the Act. For example keeping club members could claim that a relation was an indication of that company's intention, or to trade with a person or not, rather than a fact on an individual. Facts or opinions must be disclosed on the Data Subject while the intention of a Data User need not be. So far it seems that the Act will treat such "right" information as non-disclosable, and the courts of action would render the act not to stand. Finally, the Act does not award any rights or obligations with respect to data that never gets near a computer. You never know, that may even lead to a reduction in the work done by computers.

The Data Protection Act is going to need a lot of time sorting from the courts before the rights and obligations imposed by it are fully understood. In ten years time I suspect that it will be used a great deal especially where you consider that individuals, over the first time that they have a right to inspect their medical and educational records — so long as they are kept on a computer.

### Footnote

For those who need to register you have until May 1st 1985 to do so. If you need further information then ask at your nearest Post Office for the Data Protection Registration Pack or consult the Data Protection Registrar, Springfield House, Water Lane, Wilton, Clevedon, Phone 0623 331777.

As yet Data Subjects do not have the right to sue. This will come into force in two years time. However if you do suffer damage because data concerning you has been released then you can seek redress in the courts, that right has existed since September 1984.

## EASY WRITER

Interceptor Micros, \$9.99  
\$2995

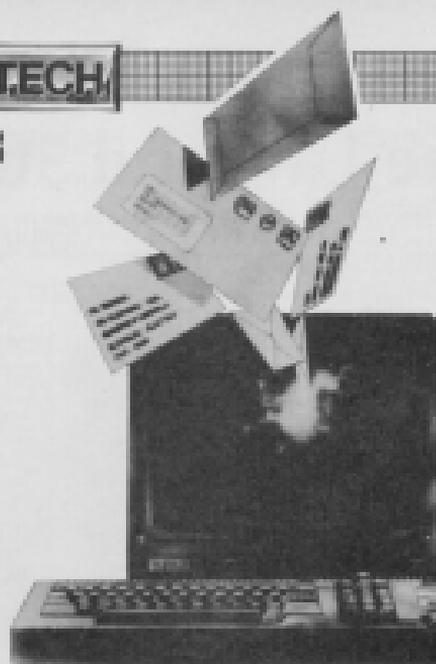

The Amstrad is popularly perceived as a low end of the market business machine so it's only logical that it should occasionally receive low end of the market software. Easy Writer is such a product, aimed at home users not requiring an all-encompassing word processor. What Easy Writer does provide is a simplistic editor for the creation of short pieces of text.

The editor works in windows with a default white upon black text display. As far as I could tell, there was absolutely no way of changing the screen mode or colour settings. Those of you who own colour monitors will find the facilities slow to respond after a couple of hours use.

After watching the pretty loading screen take five minutes to load in, the main program itself loaded in about half the time. You are then asked to set the left and right margin defaults. For some reason, once the margins are set, they can't be changed unless you are willing to destroy any text in memory. To reset margins you type CTRL and R simultaneously.

No automatic insert mode is provided and you have to manually insert any characters. This can be extremely awkward since you need to know how many letters have to be inserted before inserting the insert key. Normally the program works in uppercase mode, an interesting feature which is not used very often already there. Once the rest of the text has been inserted, it usually uniformates itself, causing words to stretch across the ends of lines. A reformat paragraph function is provided for just such an occasion, though it's not really an elegant solution. The delete function doesn't really work as expected either. If there is a return on the previous line and you try to delete it you find you will delete a line full of spaces, slowly working your way back to the return period.

Full tab functions are provided, both setting and resetting to any place within the editing area. Save and load only work with cassette — if you want a disk drive Easy Writer doesn't seem to know. Unlike most products Amstrad, there is also no facilities at all for the user to upgrade the program to disk. Since quite a few users own disk drives, it would have been logical to have included such an option instead of forcing disk users back to slow down to the speed of cassette recorders. On loading, all text previously stored in memory is deleted, so there's no way of importing files from within the program.

When it comes to printing your letters, you have a choice between continuous and single sheet paper. There's no document limit set for email versions in the printer, which is quite an oversight to those wanting different styles of text in one document.

There are lots of two competitors to Easy Writer at this end of the market and it isn't one of the worst by any means, but get what you pay for, and I think doubting the money to get the excellent Amstrad is worth it. Easy Writer is not expensive. To use it is awkward and its scope is very limited indeed. It's more of a word processor than a word editor. On the other hand, it presents quite good value for money if you have low serious demands of it.

Gary Liddon

## MUSIC MAESTRO

Karna, \$9.95 each  
Author: S Jones & P Midcut

Music Maestro is a program which turns your Amstrad into a reasonably respectable music box. By careful manipulation of its control panel, the user can afford the user the ability to enter a single line tune that can span up to three octaves, define note lengths and accompany the tune with a drum pattern of either rock beat making or one of the several patterns. It can provide accompaniment and fill out even the simplest tune. In short, it does most of what a small single keyboard instrument does. For the beginner, there is a quick and well worked out manual in the instruction booklet, although it would have welcomed a software driven demonstration tune as well as one on tape. The maximum number of notes that can be stored in any one tune is 16, generous (3000) and a large of tunes can be stored on tape or disk and brought out to impress friends or relatives.

Most of the commands are input from the keyboard which saves a lot of time and missing about. Notes have to be entered

as the note name plus its length. The cursor runs over a list of note names and lengths and you select what you want. Notes and chords are similarly entered. One or two notes held. You cannot enter notes or rests of over four beats or under half a beat in length. It would have been a simple matter to include this if it didn't become apparent that if you fail to enter a chord at the right place, there is no way of editing it back in.

The edit feature enables you to stop through the notes you have entered and point the cursor at the note you wish to, perhaps remove it and insert the correct one. You can also insert notes with ease. However, the edit replay mode does not accommodate note lengths or rests. This could cause problems if you have complex rests and if you aren't sure about note lengths, it would have been a help seen a copy function as well, so generating loops of notes is easier too.

The actual sound created can be altered by saying it in from the keyboard. Changing the tone to your liking. The creation of sounds on offer is a bit limited and a wider option to generate ground in the sound chip would have been preferred. The drums that can be added are either light, medium or low in pitch

and to be honest, they could have been a bit more compressed in sound. Although the patterns and variability of the program are good, the real sound is a little awkward. The program accompaniment is generous in that it gives you eight patterns, each one having four variations, making a total of thirty two possible accompaniments. This is good but the overall effect is marred by the fact that the program has chosen to voice the accompaniment so that they clash with the melody line. Perhaps a volume control for the accompaniment would be a better idea, an alternative pattern or chord choice, they still increased the tune. There are many books on the market that consist of simple tunes laid out as single line three plus chord systems. These would be a useful addition to the program. Perhaps more a few could have been included in the instructions as well as some alternate drum patterns to try out.

Overall, this is an interesting program, if a little frustratingly limited. Input of notes is a little slow and it requires the quality of sound could become irritating after a while. Full marks for variety and if you own a programmable, non-performance keyboard, then try it.

Jon Bates

# We thought it was about time we put you in the picture.

When we introduced our AMX Mouse to micro-users, the response was phenomenal.

And no wonder!

Hailed by the press as 'probably the best input device that has arrived recently', the AMX Mouse brings to AMSTRAD CPC users, the same sophisticated, positive control that has, until now, been the province of more expensive computers - like the Macintosh.

The fantastic AMX Mouse Package opens up an entirely new and exciting world to AMSTRAD users and comes complete with Mouse, its own interface and three fabulous programs.

## AMX ART

This computer aided, drawing program has to be seen to be believed. Making full use of on-screen windows, icons, pull-down menus and pointers, you'll be simply astonished at the quality of work you can produce, store and print. There is even a pattern design program which gives you an unlimited number of designs for use in your own drawings.

It's a program that can give hours of family fun and at the same time is ideal for serious professional applications.

## AMX CONTROL

Now you can create a 'Mouse' environment in your own programs. AMX Control adds extra commands to normal Basic and features two programs.

1. The machine code program to extend the Basic interpreter which gives you full use of windows, icons and pointers.
2. An icon designer, an individual program for creating and storing icons for use in your own programs. The number and variety of icons you can create is limited only by your needs and imagination.

This fabulous AMX Mouse Package costs only £69.95, a price as remarkable as the package itself and it includes a fully illustrated operating manual.

The software is supplied on cassette, and 3" Disc. The AMX Mouse Package is compatible with Amstrad CPC 464, CPC 664 and CPC 6128.

Ordering couldn't be easier.

This superb package is available from all good computer dealers or direct using the freepost order form below.

So what are you waiting for?

## AMX MOUSE

IMAGINATION AT YOUR FINGERTIPS

SEND TO: ADVANCED MEMORY SYSTEMS LIMITED,

FREPOST, WARRINGTON WA9 6SR.

# Yie Ar KUNG-FU

Imagine, £8.95 cover

Imagine has come to the rescue for those of us who spend our free minutes for the King Of The Arcade machine to be recalled. Yie Ar KUNG-FU is the Amstrad version of one of the most popular arcade games licensed from the Japanese company, Kossun. Similar to the popular (though a bit of a Zapping Mat) this is a martial arts combat game. You will be expected to battle it out against some of the nastiest (sharp) enemies to ensure your Japen's shores.

Your heavy muscled shape makes his appearance against the game background that the arcade version boasts, except that the artwork is motionless. Even before you can catch your breath your first opponent comes charging in. You don't even have time to enter any of the personalities found in other combat games — your opponent won't pause for any of that naming and scoring rubbish, instead he will just set about you hitting movement controls until he is very unfeeling. Since this is combat there are no judges, the winner is the chap who can keep away leaving his victim wriggling on the floor. The top corners of the screen show the status of your health, every time you land a blow on your opponent his bar will decrease. The amount it decreases depends on the severity of the blow you land. The blows themselves are registered by a quick flash appearing on the part of the victim's anatomy which will later bear a bruise.

Your main actions are controlled either via the keyboard or joystick. The Amstrad version offers ten modes of attack and a further six movement options, giving sixteen different moves which must be controlled by using all eight points on a joystick combined with the fire button to obtain a further eight. The keyboard can be defined to take out otherwise it is set up to use the numbers keypad with zero as fire. The attacking moves include the more recognizable forms of attack plus a few novel ones. Each movement varies in the damage it does to the victim and the number of points a game for the player. A flying kick scores 2000 points while a push-downs kick and leg sweep only scores 500. The more unusual forms of attack, like the slide punch or the ground hit, will still 1000 points to your score.

To complete the game, you must defeat all of the opponents, if any one of them defeats you, then you lose one of your

four lives and must fight that bout again. In all you must fight your way past eight foes, one less than the arcade version. The first chap, Bocho, is a big beefy bloke who likes living a lot. The only thing scary about this man is that he always himself to enemy his four hands. The next fighter has a considerable advantage over you since he throws fighting stars when he is out of reach of your fighting limbs. If you fail to avoid them, either by ducking or jumping, they deliver some nasty blows. The third opponent uses those nasty sticks joined by a short chain, sometimes. If you survive him you will have to face being attacked with a pole, a club and a sword. The final two rounds come under the heading 'Bon-fan and Blues'. You can discover those for yourself.

The layout of the screen faithfully follows the style of the arcade games. The top of the screen displays the number of lives that you have remaining and the points you have scored so far. The current high score is also shown. Once a game is over you have to enter your name on the high score table in true arcade style. The two player

option does not allow two people to compete but instead offers the same option found in an arcade machine, that is two people taking it in turns to take on the computer.

## CRITICISM

1 Imagine don't have many licensed games under their belt but nothing they have ever done compares to this. The graphics are superb and the fighting action the best I have seen. The movement of the warriors is great. I love the way the weaponized chap ends up on the floor, legs waving in the air. As far as I am concerned the people who converted this to the Amstrad have done a first class job: they have set a standard by which I will judge other games.

2 Yie Ar KUNG-FU is the game I would have chosen instead of Yie Ar Of The Exploding Mat. It is altogether much more challenging and playable. The levels of enemy are far more difficult to defeat and the different characters and weapons add a lot of

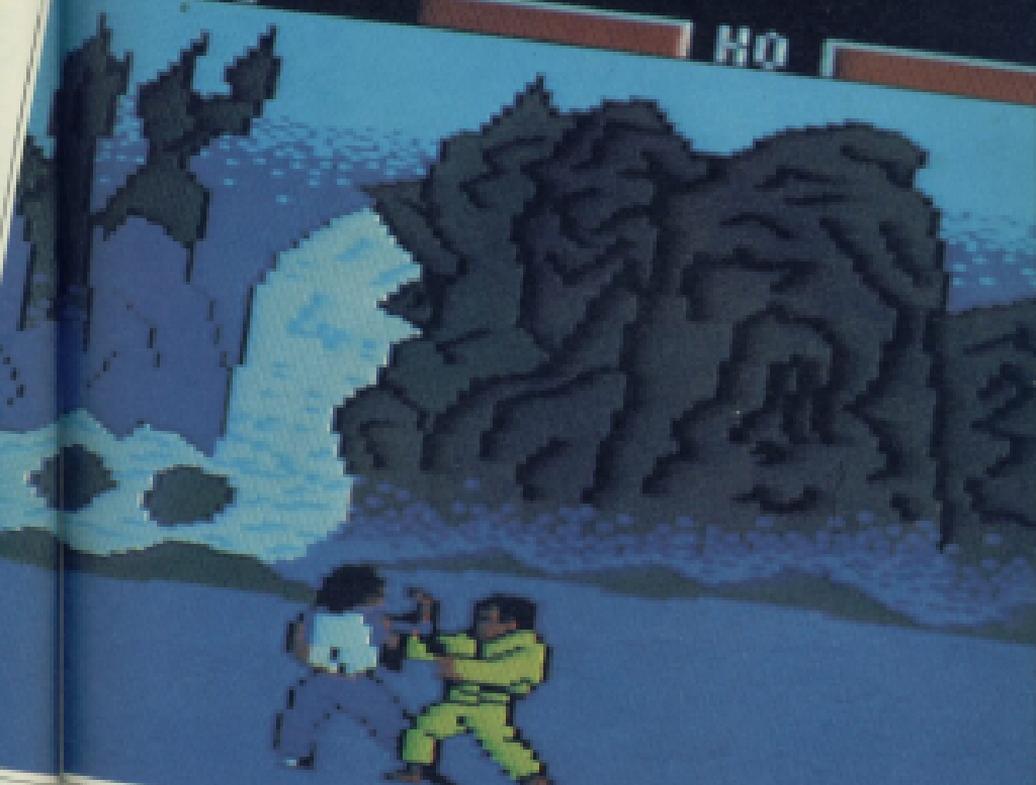

depth to the game. Although the idea of showing the area of impact with a flash worked very well, after all it is possible to damage your opponent by standing on his head and it's nice to be able to see that you have stamped on his head! The music was not remarkable but it complemented the game. The sound effects were very good indeed — the clag making the sticks was made all the more frightening by the accompanying sound. My only regret was that Imagine have stuck so closely to the arcade version that the two player option does not allow you to take on another human; instead it only allows two players to take on the computer in turn. This program has been done so well that the rest of the industry will have to look hard and long at the quality of their own work. We are beginning to see what can be done in an Amstrad.

00300  
DO LONG

HI-SCORE  
0093580

HO

**3** This is a superb game to play and has been beautifully converted to the Amstrad. The graphics are clean and well animated. The original background "music" is more than imaginative, but the sound effects are good and give a "feel" when you kick someone or get hit by a chain, pole or any of the many little weapons employed by the Japanese sword-fighters. After only a few minutes you will become "hooked", totally dedicated to your task, playing only for the odd level of size to keep your "Yi" up.

**Presentation 75%**

The position of the key defines option was a necessary inclusion, we didn't get to see the way but it's bound to be read

**Graphics 96%**

State of the art for the Amstrad, big colourful and smooth.

**Sound 87%**

The music was good but the sound effects are better

**Playability 93%**

It may take a little while to get the hang of the moves but once mastered they are dynamic

**Addictive qualities 95%**

No self respecting arcade player could leave it alone

**Value For Money 98%**

Another game at the artificially high price but at least this is worth it.

**Overall 96%**

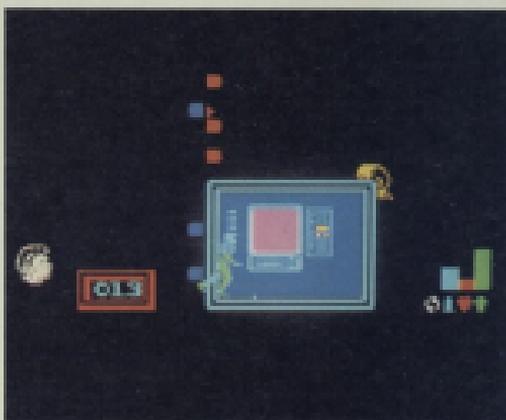

Your favourite would hate you if you passed it by

# SOMETHING ELSE TO ST

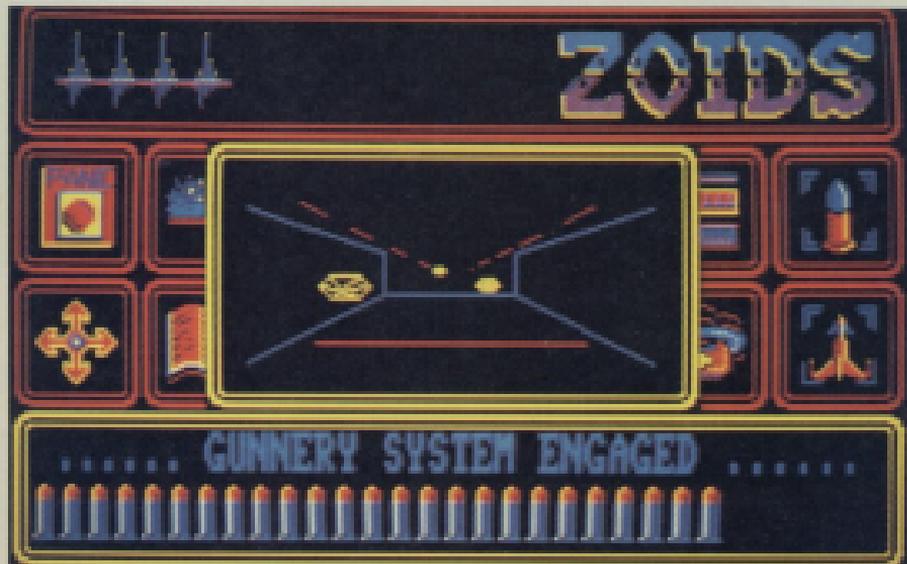

**L**ife here at **AMTIX Towers** does have its frustrations. Apart from the storage heaters, which I'd like to give Fry's technical expertise and simply refuse to do anything other than act as walls for piles of magazines, we have to cope with the psychological element (referred as 'excessive distracted stimulation due to belated appearance of exciting games'). It does seem greedy that despite the number of excellent games not have been able to review for this issue - that we should want yet more. Unfortunately our reviewers' games-huge appetite is never satisfied (as is soon as they look at an interesting new title they start to go up like wall - being Frighten Day by Jay and Karl) title bars ago. This means quite a few problems - not least being (usually) too little to print on the wall paper. To give you an opportunity of experiencing this frustration for yourself I thought it might be a good

idea to mention four games which seem promising and that should be available in time for the review for of this year. Of course it would have been nice to have reviewed the games but due to any number of reasons excluded from 'The Programmer's Book of Excuses to Explain Late Software' they simply haven't appeared in a complete enough form to warrant the full treatment.

The *Excuses* portion of *Excuses* lists to help you to avoid the Annual 'excuses to avoid'! For information to see up-to-date prices and to see a real review.

Some rough ideas from inside a Zoid's head. Can you get your mind round to anything?

# PLAYING WITH GRANDFATHER'S ABACUS

## TECHNICAL

FEW software houses have encountered the success that GARFODYLE GAMES has enjoyed and remained in the background of the industry. It's not that the people behind the company are so secretive, just that they feel their market isn't interested in them personally because they aren't teenage wizards. So ROBIN CANDY and ROGER KEAN hitched a ride up the MS to investigate the creators of such computer heroes as Gushalain the Great and more recently Commander John Kepler Marsh, GREG FOLLIS, ROY CARTER and TED HEATHCOTE.

The Garfodyle Games trio. Left to right: Greg Follis, Roy Carter and Ted Heathcote.

King Street, Cheshire is unrepresentative and busy. For hours being some gilded cathedral or computer pit, complete with grotesque figures attached to the high ceilings, the headquarters of the New Products are in the third floor of a modest, four-floor brick and concrete office block with an insurance company just below it and the smell of disinfectant haunting the corridors. The space consists of a conference room, a sales office, a writing room for Greg and Roy, and a stock room with some games and boxes of toys. The toys are important.

The computer industry has always been associated with machines and discovered computer overnight and made a fortune but Garbage Games' production into the home computer market has been a different path of steps altogether. It all started when programmers were busy in a computer room department where Roy got his full game, though Roy will do and Greg worked for a long period before. This included them working at the larger end of the computer market and eventually, throughout the years they've come down in machine size, though Greg admits that the most computers they worked on weren't necessarily more powerful than the home micro today.

"The first one I worked on," he says, "had the same games as an Amstrad and wasn't there in the room, it was an 80 machine, an ICL 1900. It was very slow. We used to play *Conqueror's Citadel* on it. That's how it all started. I suppose," he adds, "it was the game."

"You're naive, huh?" says Roy, dismissing the myth that Greg is the only one with an operational eye. In fact listening to these boys is like watching two blind men describe a horse.

I started on computers at a company called Hewlett, continued an unperformed Greg Adair. I was employed by them as a programmer in the central computer. I worked as a programmer for a few years and they decided my talents might be more usefully employed in another. I asked "What's the money like?" They said, "It's better," so I said "It's an answer." Greg's new job would have more into contact with Roy. When we started our job's like each other very much. I can't remember why... well I can. I can remember exactly... it was nothing to do with you at all. I said, "I like you!" "You didn't like me?" "That's right, and you didn't like me."

Having established his Adair relationship, they ended up getting together over a computer program and decided what they were there at all. They didn't start "they" and because they had a lot of fun working on the program they decided that if they could be in the same department, it would mean that they could have a lot more fun. So they developed a brilliant scheme.

"We invented this new department called New Products Research and Development," continued Greg. "The manager said, 'What a great idea! You can make up your products' which of course we never did. We actually got our new office. I suggest simply because we had a lot of fun and made a lot of noise which never actually stopped us with the work we were doing, but stopped everybody else's working. But we had an awful lot of fun more fun than we have now. We did eventually write some very good programs for them in the end, one of which was fairly important, which they've just started selling, something that

and hard advertising. Feeling that they could substitute the standard of software presently on the market without any massive financial or time commitment of any sort they chose straight in at the deep end with their first game *Ad Astra*.

"The thing that actually attracted us to games was that it was a method to make money that we could afford," says Greg. "We both have mortgages and commitments that you can't throw away. We couldn't have done it any other way because an employer didn't have the backing. We had been involved in business, though, and knew some of the pitfalls. At the time we were still working in the New Products

Graphics, which at the time, was just starting. As soon as Ad Astra was released, we moved to the New Products. Common to popular belief, in the New Products office did not lie in Fighting Fantasy.

One day after releasing *Ad Astra* I wrote this routine which showed a character walking in a rooming background. My results, Greg thought it "looked nice", so then they looked around for a program which had the character.

"Eventually we found *Conqueror's Citadel* and so the New Products was born.

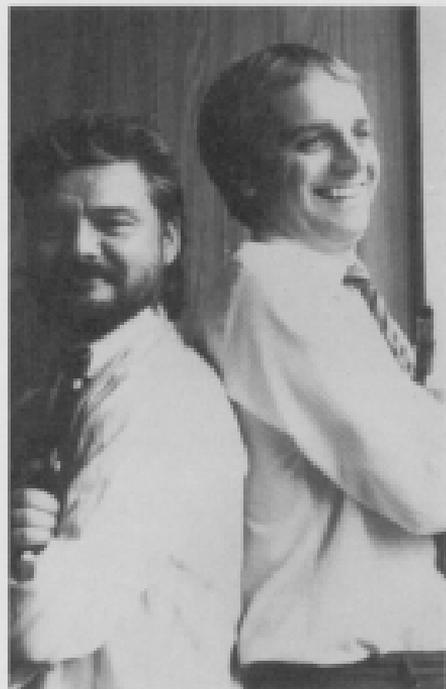

With the exception of *Ad Astra*, all of Garbage's games have carefully worked out plots which lend an almost unique atmosphere to the game. It is this atmosphere and the intricate storylines that make games like *Manpower* classic.

"The apparent history content of our storylines comes about simply because we enjoy reading them," Greg says modestly.

It is clear from that we enjoy the idea of a story to be on the tip of the iceberg, so you always have the impression that there was a lot more going on that you didn't know about, and the resultant effect is that you are completing the story as you complete the game, something that is a novel feature that sets it up in you. That is what we're aiming for, a true computer movie that is realistic. And we like to think that we achieve that in our games. I think a lot of adventure type stuff tends to be story based, it's a literary material like *Lord of the Rings*, can provide an ethos to build problems and work out a story game."

Greg and Roy work closely together. "We get an idea for a scenario and then we discuss the problems as we go along, but three of the game's ideas are the creation of the real world, mainly from Roydon. Our next game *Stinson's World*, however, is aimed more at the general public and has more of the *Manpower* type of Earth ending scenario. The game is intended to a lot of fun. If people play it and say "That was fun!" then the game has achieved the purpose for which it was designed. The industry is far less serious now. It really more fun injected into it, after all it is an entertainment industry."

On the thorny subject of piracy, Garbage Games have been almost silent in preferring to concentrate on convincing more of the program rather than spend the time developing protection routines for it. Roy is quite fervent on this point, especially when it comes to discussing how many potential users are lost through illegal copying. It would suggest

Adair and Carter in agreement — the game are for making convincing security records.

we felt should have been said three or four years ago."

They had been working for the company for around 15 years when great rumours that teenage "programmers" were offering £10,000 to produce their own feelings about getting an anti-compromised form of turn their attention to games outside daily business work. At this point, Roy remembers, long some friend of Greg's, was asked in to join particular recognition of the

Department, as *Ad Astra* was developed in our spare time. Consequently it took nine months to develop which was an apparently long time. We could just *Ad Astra* together in a few weeks' time.

*Ad Astra* only appeared in the Spectrum and the *Nibbling* magazine, COMDEX, was finally surprised to find a young, interesting software dealer at risk to have. The game received 85% with particular recognition of the

that we lose 50% of potential sales on every game not through piracy but by not having adequate PR. That's a fairly reasonable figure. Madonna realizes an educational effort towards the retail hardware that are serious, but who cares if they know what your code is? Isn't it just as important if someone knows what your code is, there is no way of stopping tape-to-tape copying.

After Bennett's World Game's return to the more serious game with the second installment in the Siege of Zorro trilogy, Foxkus. The lesson for this will be totally different from anything that Gargyle has done before. Although there will be still be various problems which have to be overcome to complete the game, the presentation will be radically different. Greg suggests that Foxkus will probably end up as a mixed media game, perhaps using some sort of sentence input using semantic analysis of sentences rather than syntactic — this will be quite new. Before starting Gargyle they had been using an artificial intelligence routine where they looked certain pieces of Albrecht Greg and how they hope to incorporate into later games to limit what Greg calls a sort of artificial Darwinian and "Chomsky" whatever turns-up in Foxkus you can be sure that it will have plenty of animation and beautiful graphics along with intricate puzzles. Foxkus should turn out to be a compromise while still being fun, the ingredients Gargyle feel are necessary to make a hit game.

"There's a lot of new ideas about at the moment," says Greg. "It's very difficult but you have to constantly learn from previous title releases by other software houses. I would be quite happy to turn out Darc Canasta but there's a market out there and say 50% of it is buying Daley Thompson's Description so you've got to go with the market here. We have plenty of ideas which are newer and should develop but time isn't on our side. We're not going to release a game every few months in order to live. If we had six months to develop a game we could turn out something on the order of things that would stimulate the competition but we've all got mortgages to pay. In order to translate our ideas into software form we would probably need an **AMTDX 5000**."

"Before we can discuss the mega games we have to expand, it's employing a few people to take away the things that take up so much of our time — a person to answer the phones would be a real boon as would someone to write some of the less complex but time-consuming routines in our games. There's also the possibility of establishing the manufacturing side and becoming a development house similar to Gannon Designs. He says looking seriously at how and how "That isn't a total idea, it's just one out of the bank of PR straight away."

The excellent idea is Greg Patten: you tell your editors those and they come from.

Tell him about the football team, Greg.

Mention of Gannon Designs leads us to talk with one of the designers and the state of the post-game industry. Gargyle arrived the game industry shortly before the crash of the market but even though doom and gloom is predicted for the month they believe computer games are here to stay.

"I don't think that computer games are a fad, they're an industry," Roy claims. "It's like TV and video are not a fad, it is all encompassed by the economic entertainment industry and will always be successful. It is difficult financially but someone will publish magazines but someone will. The industry may change for example video shops may become laser videograph stores, the medium will change but the concept of electronic entertainment will continue because it's big business and you can be sure that we will be helping it along."

"To refine the notion of programming and planning ahead the concept of electronic entertainment is advanced in our. The remnants of their programming ideas with respect to the field in terms of varying sizes, game of differing value need to be tried once in a while at passing security grounds."

"We used to have terrible fun with them," Greg laughs, holding up a very football book.

Tell them about the football book, Greg. Roy suggests Greg speak at it as though inspired by one of his titles.

"The football book is a professor friend of mine sent me a pair of football books (don't know who) which was promptly sent back. He then gave us a load of stuff as to their whereabouts which eventually led to us going to take it out of his book store. We will have to take that one and give him a set of them to find it again."

Leaving the city offices, with their shoulders smothered with wires and a platoon full of mechanical, big mechanical, wireless apparatus and his guns, I am left with the distinct impression that it is in their creation and not Gushularem and Black who are truly the forces. The spirit of the software industry in such an interesting event, financial affairs who, by hand want no accident procedure, and leading the way towards an electronic environment where reality and fantasy will be indistinguishable. If they can have their own manufacturing event, but for the Amstrad and computer games in general, the hatching of the Gargyle was a truly remarkable event.

By Robin Candy, with help from Greg Patten. Both the text and the pictures were the work of Roy.

# Decipher a code and WIN A PANTHER DATAAC PRINTER

The **PANTHER DATAAC DR 100 D'Y MATRIX PRINTER** rivals at over 1200 in the shops and its price is more indicative of the features of printers that cost in excess of £200. It would seem to be quite popular amongst Amstrad users too, judging by the response it had at the recent Amstrad show. Here is a brief summary of the features that it offers:

- Friction-feed and tractor feed — it can handle our sheets, roll paper or sprocket paper.
- 1982-byte input buffer
- Underlining, elongated characters, compressed characters and full escape print modes

- Compact, 4M character life cartridge type ribbon
- 36-directional logic-seeking carriage
- Less than 600b noise level — you could use it during Cross roads and not annoy your mate and dad!

We are giving one away to the reader who can help us solve a small problem:

We asked for someone to write us a little story that we could use in this magazine. A writing machine set off and wrote one but unfortunately when passing it from his computer to ours all the letters took on new values and the story came out as a Caesar code. This is a cipher

where all the letters are displaced by a certain distance. What you should do is to break the code. You could use your Amstrad to help you and then print the questions at the bottom of the page.

WHAT IS THE NAME OF THE GNARLED OLD MAN?      WHAT IS THE SECRET OF ETERNAL LIFE?

# KOKOTONI WILF

Kokotoni Wilf is an arcade adventure whose undoubted intention is to steal the title of 'best arcade adventure program bar none' from all fat belly.

To maintain that you must recover all the pieces of the legendary Dragon Amulet (which has been scattered throughout time for your master the great magician, Urth).

Throughout the quest, Wilf comes up against many dangers from huge lumbering prehistoric dinosaurs, to hostile alien robots, but the reward for recovering all the pieces warrants the risk.

## STRANGELOOP

Virgin Games, £8.95 cash  
Author: The Gang of Five

The first space-age assault adventure into the domestic with the 250 DPA 101 screen size. A long forgotten robot-controlled factory situated on the edge of a size system sets the scene.

The factory has worked away automatically for a hundred years, the robots have finally carrying out their essential tasks with noise. A powerful alien force, possibly galaxy of Earth's tones, has invaded the factory and reprogrammed the robots so they can't destroy our planet.

You join a frontier that hostile environment and discover the Control Center where you can double all the automations. In a climate suited to robots you have to fight your way through zero gravity, change temperatures, floating seaweed and through the many robot and wonderful screens to achieve this.

Armed with only a space suit and a laser you have a formidable task ahead of you. There is a pit-crew for you to use once you have found and collected it. Collect it first, the robot guard-

ing it isn't going to give it up easily, not without a few bullets being bought about, anyway.

Once you have got the jet pack your mission can really begin. Don't spend too much time admiring the view, get in a pipe and move your cleaver (if it isn't blasted off).

As the factory tight of the screen there is a corner trap. This shows the adjacent two rooms in each direction, a total of 25. It doesn't reveal what is in the rooms, but you can clearly see the entrances and exits to them, so you are able to plan your moves ahead.

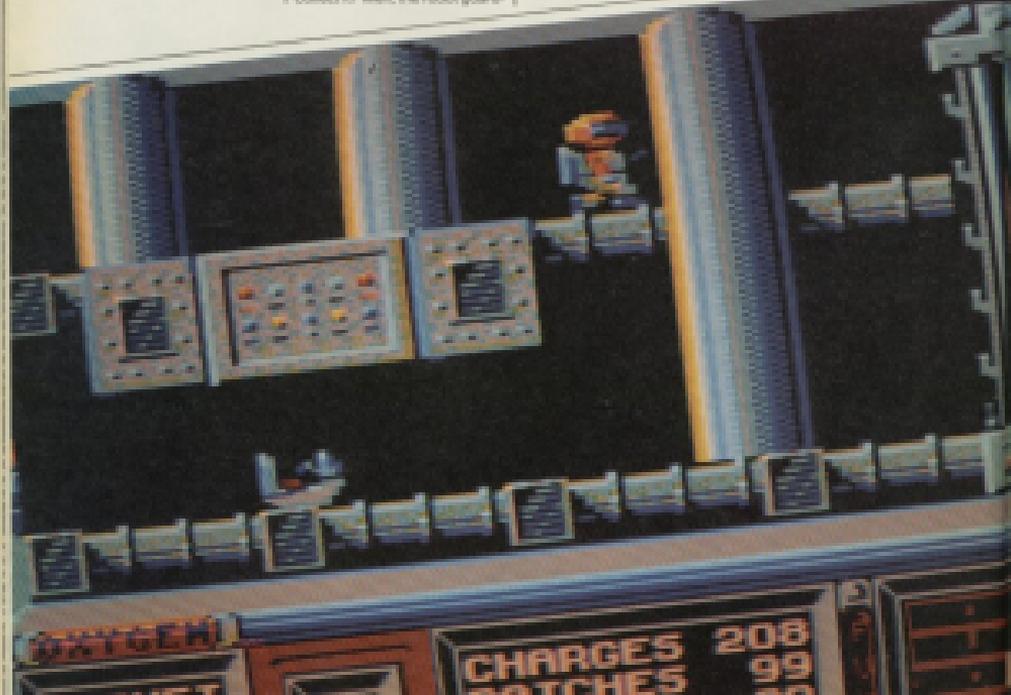

The pipes which link the various rooms are zero-gravity lifts forming a large and complex system and allowing extensive exploration and access to most rooms. If there are no pipes then there are usually doors either to the left or right-hand walls which allow you to enter the adjacent rooms.

On your travels through the

factory you see much old and abandoned machinery, some of which may still be working. There are CHILDREN robots clinging up and down and faster you if you're careless enough to stray under their nozzles. Don't revolve 5000PS grand gear into the right and ODYSSEUS BELTS, hairless but ingenious-looking, trouble away their white paths. COMPUTERS, too, tick away the long hours to themselves, but most are purely a decorative part of the landscape.

There are also rooms containing large machines which although standing static may have monstrous purposes later on in the game. Large ELECTRIC GENERATORS, a NUCLEAR REACTOR and its ENTRANCE PLAZA are just a few of the highly detailed locations.

Some rooms contain odd robots which have escaped the

wishings of the items, and are all friendly, and these help you solve the game.

As you wander around the factory you might see an object lying around. Move over it and you automatically pick it up and it falls into your pocket. This pocket is represented by a box on screen. It shows what you have picked up. It isn't too accurate: the object moves slowly, press space-bar and a cursor appears in the box. Move the cursor over the object and press fire. You get a read-out telling you what the object actually is.

These objects tend to be used to solve puzzles throughout the game, and the only way to complete this game is to use all the objects. At first you only find a few objects. But give one of these to the correct friendly robot and he gives you another

object in return. Use this to solve another puzzle and you gain yet another piece! Eventually you solve many puzzles you should, hopefully, be able to gain access to the Control Center and then disable the robots.

When you start the game you are given eight lives. You can't earn any extra lives but there are supplies lined around the factory which you can pick up to prolong your current life.

The main cause of death for your man is suffocation. Throughout the factory there are thousands of pipes of various diameters (WATER flowing around randomly). You have to shove this flying debris; if you touch it it makes a hole in your space suit. This is indicated on screen. If you see warning icons (holes) the particles is automatically fixed. When you run out of patches, though, you start to lose oxygen.

The more punctures you have up to a total maximum of 999 the faster you lose oxygen. The faster you lose oxygen the less time you'll last. So don't get too many! Occasionally you come across a MELLAGANIN. This special reward shows you at high speeds and gives your space-suit more holes than a sieve.

If you want to map the game, the space bar pauses the action and tells you the location you're in. It does this by referring to the factory layout. The programmers have marked the top D as 0 and shows the side A to Y. You can then work out your position in the factory's eight factories you start in in the bottom left hand region of the factory.

## CRITICISM

**1** The Gang of Five established themselves with previous mega hit *Sonny*. Now after a bit of a fall *CompuWorld* readers' feedback within the software world is one of the best teams of software producers for the Amstrad. What is first so overly impressive is the graphics content and detail. Through all a totally different style to *Sonny*'s impressive old style world type of display, *Strangerpool*'s presentation is just as impressive. The game is very good as well, bearing a lot more resemblance to the Commodore version than the original appears now on the Spectrum. The puzzles are entertaining and challenging. A few things are a bit

hard but after finding the Veego look-alike I found it a bit easier to traverse the ship. Having to be captured in something of a challenge. I really like it and even though I feel *Sonny* has the edge this is one of the better releases to appear for quite a while. Definitely worth a look at.

**2** As soon as I saw *Strangerpool* on the Amstrad I knew it was heading for *Average* ratings. The graphics are well detailed with lots of colour, this gives a excellent impression of 90% the presentation of the games in *Strangerpool*, especially the beach ball and the hot water which bubbles away waiting for you to be heated in it. Colour is well used on your ship, but this does result in a colour mixing. The sound is excellent with lots of ambient noise for fire and explosions. The screen is very well used using the split-screen effect. My only complaint with this game is that it takes up too much time taking from screen to screen — when you start you can be long time waiting as they've got to show 99% of screen around every few seconds. Overall this game is in my opinion just a bit better than the other versions and definitely the best from the Gang of Five since *Sonny*.

**3** I was always a bit of a *Heard*, but forced by cold weather and athletic misadventure to return to the soft heights of public transport, I was surprised the *Strangerpool* did so much for the good use of colour and clear graphics, but for the fact that I could go swimming around the screens like a space trout, with my old trusty pants substituted for a space suit. Although the game has potential I do not think it has been completely realised. After a while I found that it was possible to "bank" your air bubbles in places where you're completely

stuck. The only way to get out is to die by running out of oxygen, a horrible way to go if not dead because it takes a long time. Floating between screens takes a few too long, probably just the effect of having to move so much screen chemistry. The game is technically good and seems to have followed the old game house to good effect, so it is a bit that the game feels a little like the old times there is not enough depth to it.

**Presentation 85%**  
Support loading screen.

**Graphics 98%**  
Graphics even exceed those in *Sonny*.

**Sound 90%**  
Very realistic sound effects.

**Playability 81%**  
Very easy game to get into, but beware the getting out isn't.

**Addictive qualities 63%**  
A very difficult game to solve but a little too easy to stay alive, you rarely feel threatened.

**Value for money 85%**  
A fair price for a state of the art game.

**Overall 80%**  
Would have approached perfection if there had been a little more to do.

# WIN A PIECE OF COMPUTER FURNITURE AND AN ADVENTURE CREATOR

## Win a GENESIS Adventure Creation System — 20 Copies on offer from CRL

### Write a scenario and win a prize

You lot are a lucky bunch. Every month you get the latest copy of AMTIX, read it, relax and enjoy yourselves. Ever scored a thought for the real world in Ludlow who create it? All those idle hours and even longer push-button spent on getting an issue together are finally beginning to take their toll on the printing behind the scenes.

Big J has taken one of the BBC portfolios previously used to write the magazine. Candy has come to the conclusion that life is just one great big Z80 and has worked the office heating system in an attempt to improve staff efficiency by turning us into superconductors. Gary Dobson's clothes have been seen in the kitchen looking a substance not quite, but almost completely unfamiliar. Meanwhile, Mial Masterson, the Ludlow Laporteaux is training for his 25 yards hedge — in Guiness.

And sitting in his marble throne, surrounded by a mob of burning Z80's, King Kean (contributor to his master) oversees his empire. At the snap of his fingers, Apocdo burst into life and the unsuspecting mortals are shown to reap the fruits to a significant. A nightmare far more terrifying than anything you have ever seen on your mind (going) since you read this — in AMTIX Towers.

Try and imagine surviving for a day. Baying save. Just today. For yourself in the position of a new recruit to the AMTIX team, starting work in AMTIX Towers. Write an adventure scenario in which the player takes on the role of a new member of staff and has to survive his or her first day at work.

There is no set length for your adventure. It can be presented in whichever way you think is best

and you can base it on the art department, mail robot, editorial — anything you like to do with the magazine. The only rule is that the player must be a new employee whose only concern is to survive the day...

You could win one of the twenty copies of the Genesis adventure creation system, which would allow you to implement your scenario as an adventure with text, graphics and sound. Who knows, enter this camp and you could take the

first steps on the road to fame and fortune as an Adventure Programmer...

It's the only name you left here you know. How I am. Nearly fipped for a while but everything's just robbet-boo since I had that nice chat with the magazine policeman...

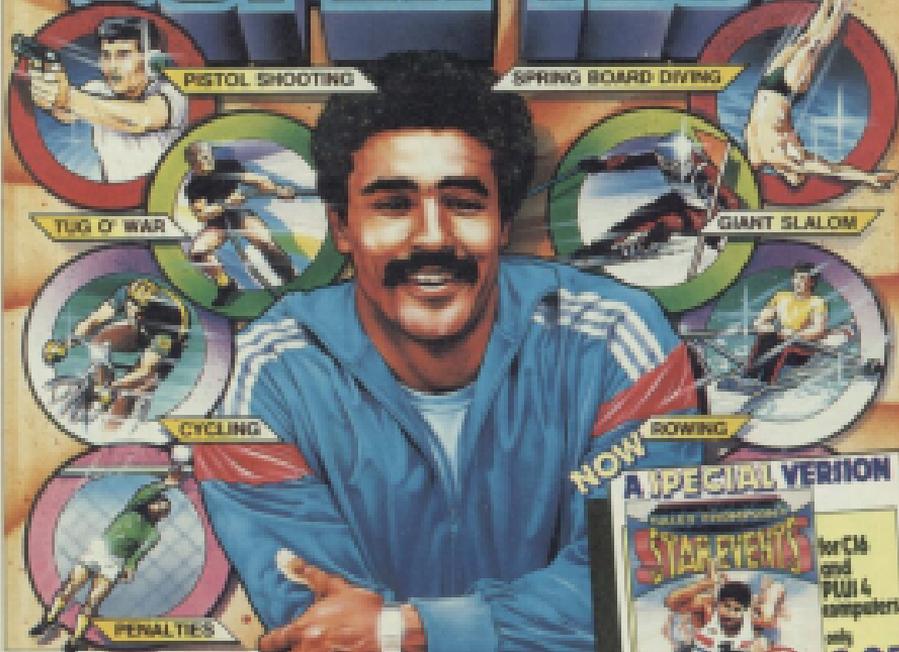

Send your article to: THE MAIL ORDER DEPARTMENT, BOX 10, BOX 10, LUDLOW, SHROPSHIRE, SY8 1AD, Here.

sure they arrive no later than January 31st 1986 and please remember to include your name, address, age, sex, shoe size, hobby past, HGA status and any other information you feel is likely to convince us you're as sharp as the average Newfield minion.

# THE WORM IN PARADISE

Level 9, \$9.95 cas

This is the third game in the Silicon Dreams Fantasy, started by *Dragon* and continued with *Return to Eden*. A point made clear in the instructions however, and worthy of repetition here is that you need not have played either of the game's predecessors to complete this one.

For those unfamiliar with the Silicon Dreams scenario, the game involves the human inhabitants of Eden, an Earth-like planet orbiting Proxima Centauri in the 26th century, the world is a strange one, run by robots. Whether the human inhabitants of the domed cities in this world are antedotes freed from the burdens of manual labour or just men pushing pets for the robot bureaucracy is a matter for speculation. One thing is certain, Eden is anything but.

Eden is a different vision of George Orwell's 1984 scenario, in a way, humans could have been free enough of their masters, started off by building machines and eventually robots. Robots built more machines and set more sophisticated robots and

Robots spy reflectively build humans. They grow them, actually. There are no farms (except). There are lots of trees (except). The system being robotic, is inconceivable. However, it is possible to take advantage of some aspects of the bureaucracy, if somebody is ill and you report it, you will be rewarded they will be healed and other, several reports are financially beneficial. It's a weird place to have an adventure.

When the adventure begins, you are in the first and smallest of Eden's cities, Epoch (a feature reminiscent of Tolkien's *Sperrow* is used as you are in the middle of a dream sequence rather interesting, considering . . .). However this dream sequence proves to be far less interesting than Tolkien's. After waking, there is a "welcome to the pleasure dome" as that's the complete you're in! Is there no end to this inspiration?

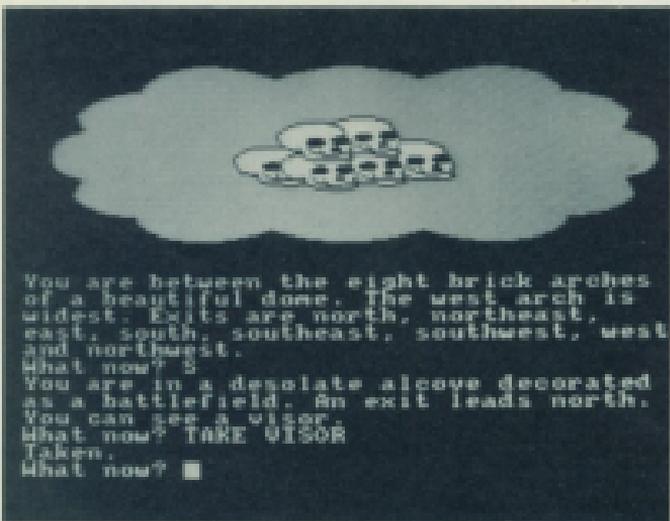

Exploring the complex can lead to a variety of interesting circumstances including eating puzzles and finding pet dogs. It is possible to leave the complex and explore the city beyond and this can lead to trouble with the city's transport system. It brings a whole new meaning to the word maze. Once you're in, it's

unlikely you will escape without first deciphering the cryptically colour-coded floor.

Everything you are likely to obtain will load you credits, or "credits" as they are simply known. A player's current number of credits may be checked by examining a tattoo on the wrist, an LCD display which gives the current time as well.

Level 9 is making a lot of boasts about this game. It employs a 1980 word vocabulary (better than 80% test composition) and a highly efficient buffer which allows type-ahead. Apart from all this, the parser runs acceptor full sentences, multi-argument input and recognises the use of 'or' and references to items of background scenery. This does not always work as well as one might hope but then, even the extent to which the new features do work is remarkable considering they operate in a cassette based environment.

The character set employed is the standard extended set and the graphics are the usual, semi-defined tiles that proliferate in the company's more recent ventures. An usual over 200 pictures are located on the cassette (hey and, as usual, many of these are strikingly similar). Still,

this is useful: good advantage in making the repetitive nature of scenes confusing to the player.

As for the plot, work it out for yourself. I have managed to get some way into the game, but have noticed that even though the is so typically cryptic, it will be some time before I am certain of what's going on. I'll probably be wrong right up until the end, as well. It wouldn't be the first time, with *Level 6* game.

The game is very good in terms of interaction and the company have obviously not lost their strong sense of humour but this is one of their more thoughtful games and, despite the speed at which everything goes on around you, the game is rather slowly paced. It's a good game in its own right, though after playing it, you may wish that the first two had been thought permeable. Getting anywhere in the game is a difficult there, isn't that the story with all

**Unnecessary?**

Nevertheless the lack of speed doesn't imply a lack of interest. At one point, I was arrested for being out after curfew, and was fined more than I had. I was taken to the police station but escaped the next morning. No matter how I look on the streets that a robot was firing me for being in debt! This meant I was taken to hospital and asked whether I wanted to sell any of the spare parts. Not knowing whether I had any, but realising this was a chance to get out of a cash 22 situation, I agreed to sell. The next thing I know, I had a couple of hundred quid. But I cannot find out what's been done with the spare and sold off. I can almost have the Last 22 lunch in 15 minutes from here. Nice one, folks.

I thought the new parser was annoyingly flawed in some respects. Some originals were actually lost by things like 'Door'

that's just scenery'. And often, when I requested something the computer did not understand, it would tell the use of a word was assumed but for some reason, add an 's' to the word every time. But when all is said and done, the criticisms have to be put in perspective, and what flaws there are become irrelevant when taken as a proportion of the game. It's derivative in parts but fascinatingly original and clever in others. It would make a good Christmas present. Need I say more...

## MINDSHADOW

Actionism, £9.99 case

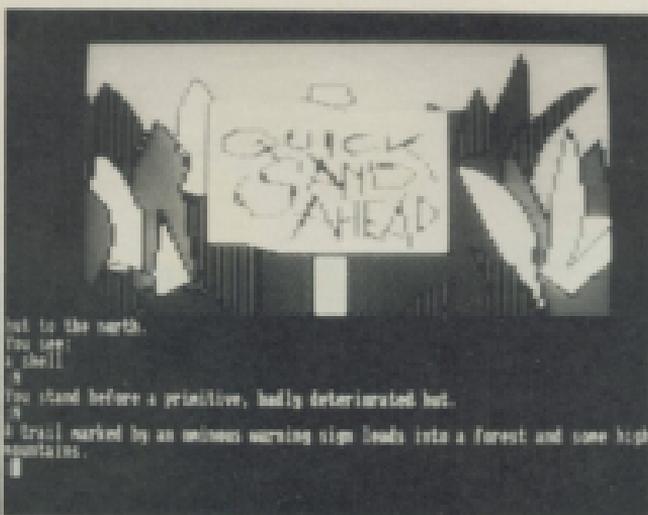

division's first local adventure story on the Amstrad is a translation of the critically acclaimed Commodore game that involves a hero, a legendary bird and, well...

When the game is first loaded, the player is presented with a series of introductory screens to explain all the nuances of amstrad's adventure game. The controls are listed. A small sample adventure is subsequently displayed along with guiding text. Very nice. The explanations are coherent and relevant and would prove useful to those unfamiliar with the nature of such games. For those who need no such introduction, the screens may be bypassed and the adventure proper loaded.

The game begins with you stuck on a desert island without any memory of who you are, how you got there and what is necessary to complete the game. Consequently, exploration and patience are essential if the game is to progress. The island has its own dangers, including poisonous and noxious plants. Clues to progress in the game are indeed plentiful, but the game is extremely difficult and all but the most patient beginners are likely to become frustrated at some point. When help is asked for, a Comrade (the central character) usually offers some clues. He's a lousy devil who will only make three visits, so use his services wisely. He isn't too keen to help in the early stages either. It's up to you.

The game uses a genre capable of taking limited multi-command input and some of the responses you can get are really quite amusing. It isn't without its

faults however. It allows you to examine objects which do not exist rather than telling you they don't. Otherwise it isn't trouble-free, however and very fast.

The display is in mode 2 in the top two thirds of the screen and mode zero at the bottom. This means that the graphics are extremely colourful and attractive. They are also very well drawn and slightly colour tone display is used. The overall impression given by this combination is very professional and not for those using colour monitors may find the text a bit hard to read after a while.

Finally, the game is in two sections. It has considerably scope for a classic based adventure and one which will take

many hours to complete. To aid you in the absence of inevitable instructions required to finish, there is a Desktop and Desktop facility which does a lot to take the mavericks out of such tasks.

I found the game absorbing and enjoyable, though I suspect I am far from finished. As it's a game about your mind I found the opportunity to "think about..." something very interesting indeed. Essentially, the player already carries the answers to the plot with him, it seems to be a case of finding things that help jog that fuzzy memory into action. It's a clever game that does really beat the success it deserved on its other conversions. Whether this pattern will change for the Amstrad conversion, is impossible to tell.

It isn't perfect. The faults with this game are hard to list many minutes. The graphics may give always looking closely at the illustrations to find details you may otherwise miss. However, if the illustration is ambiguous, there is no way of determining what an object is from judgement because, as I mentioned earlier, the game allows the examination of non-existent objects. Apart from saving objects from one location to another, there seemed to be no constructive use of the multi-command feature either though perhaps this comes further into the adventure.

In conclusion, it's a reasonably priced adventure with excellent graphics and a good original plot. But its flaws detract

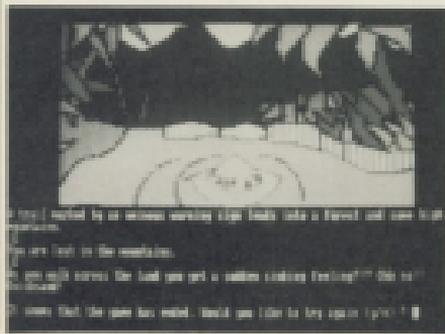

from it a little. I suspect that beginners may find the game too frustrating and therefore, the introductory screens, whilst an essentially good idea, might be somewhat redundant with regards to this game.

## JEUX SANS FRONTIERS?

This is the part of the column where I finally get to do what I've been trying to do ever since issue one but haven't had time or you can follow that then you can do anything. What's that? Well, have you ever heard of STH (see

STH Day are a company producing "Qualified adventures for the Amstrad micros. One of the first things you notice about their Games Without Frontiers (what's the Peter Gabriel fan?) range, is the

price £2.95 for cassettes or £7.45 for cassettes. They are come packaged in a standard size cassette box with a simple back cover. Most commendable. The first of the games is spoken on the Amstrad and is Station Zero, Queen Julia and James and are fully compatible with the entire range of Amstrad machines.

The first of the three is for Station Zero. Intended as a beginner's game, it involves a captain's plot to annihilate five rock tribes someone the captain not to be fazed about what) gives him one billion dollars. This incident is not just an exciting, it's a superb comedy but an interventional teamport known simply as Starling. Apparently, as a result Polar research establishment has fallen into this megastarship's hands, he means business.

You play the part of an agent sent to check the team's progress leading to the ice cap and step leading. Of course this involves actually finding and defeating him. As there are other factors to consider, apart from dealing with the typical super-baddie. Defeating the robots will reward treasure such as weapons and even a fuel!

Being a quilled game, the player is limited to two word input, but the authors have gone to considerable lengths to ensure that as much vocabulary as possible has been added and messages are as helpful as necessary. Presentation is good. Although the games have not been illustrated with the usual part of the Queen package, it really, striking looking screen spaces the opening of the game. Key words are highlighted and, as you may expect, input and responses are shown in different colours to add clarity.

The puzzles are deliberately aimed at the novice adventurer and within their limitations, work quite well. The player is unlikely to spend any time finding convoluted and unlikely combinations of the verb —

noun formula just to make his ideas work. If he does, he's probably banking up the wrong line anyway.

The game is not all that polished either in a screen function, it does enjoy such and are a beginner to advancing, then you should find the game most enjoyable. The more experienced players may find the game's limitations too restrictive, but if they decide to opt for a lighter game like those times when the old favourites are just too mind-boggling! then this is worth picking up.

The second game is more of a typical science fiction adventure called Queen Julia. Set in the far future, you find yourself allied to an alien federation struggling against a corrupt interstellar empire. Now don't throw up if it reminds you that you're reading the lines, adventure columns appear — well, I think so! After this rather hazy intro, the plot goes up hill considerably. The character full of a warship, deep-space itself and the surface of a planet, also-world, all game make the setting for the classic battle between the good and the bad guys.

This game also loads with a colourful title screen, the 8th Day arrives gradually displayed in the corner and is presented in a similar format to the previous effort. The game itself is more involved, however. There are more puzzles to solve, many of them typical of the kind of difficulties you average SF fan gets into. A knowledge of science fiction is not needed to play the game, but you need certainly be an adventurer.

Apart from the various technical problems facing the ship, there are intrigues to be sorted out and a bit of 3D-style diving—, as required by the first game? To be honest, I suppose the game was at least influenced by Infocom's Zorkness. The very reason exists had to be carried out, and the nature of the facts themselves did prompt the occasional feeling of

'dejevu'.

Nevertheless, it plays fairly well. The game is not devoid of humour and is reasonably paced. Although this game has more to offer than the Station Zero in terms of puzzles and difficulty, I found it less enjoyable, over all. It was in no way lacking as far as atmosphere goes, but the slightly unoriginal scenario still left me slightly disappointed. For those content with science fiction adventures, it can still be recommended; however, it's been written with care and attention to detail and that is worthy of praise, if nothing else.

The last of the 8th Day titles is also for the more complex. Faerie is a surrealistic fantasy that relies heavily on the player's ability for lateral thinking. All adventure games make some such demands on a player, but not until you see some of the puzzles in this one. It's doubtful whether a game of this ilk has one in this genre will ever be seen anywhere else.

It's rather hard to explain the plot as you are left to discover it yourself — well, I'm not to say that it is one outside the series of wonderfully inter-energetic puzzles. If just one of these games you either love or hate and I loved it. When there's time I'll go back to this one. 8th Day will hold dear, but I'm reluctant to use them because they will spoil the atmosphere. All that can be said for certain, is that the player is really involved in the search for various treasures spread across one of the most vivid fantasy worlds I've ever encountered.

The nature of the fantasy world is very subtle and as a result, most plays a strong part in the game. There are no contrived solutions to problems, no cliché (the extra) to encounter. Just a highly original game that takes every advantage of the utility every-creates it.

Considering that all three of the games could be purchased for less than the price of the

average adventure, and the fact that the games themselves are of a higher standard than many carrying a far greater price tag, they offer excellent value for money. However, the games are unlikely to achieve much more than a 'cut-throat', which is a shame as they deserve to do better. The main problems facing this company could seem to be that the games are only available through mail order (as far as I know) and the lack of gimmicks (which, however unfortunately, always helps sales). Hopefully, 8th Day will employ packaging (which is not but otherwise forgettable) and most importantly, move away from the restrictions of the Quill and develop their own system. Perhaps then, the label for good pen lines within the industry (packaging which is not but otherwise forgettable) and most importantly, move away from the restrictions of the Quill and develop their own system. Perhaps then, the label for good pen lines within the industry (packaging which is not but otherwise forgettable) and most importantly, move away from the restrictions of the Quill and develop their own system.

## THE WORM IN PARADISE

The computer's choice

£9.95 on AMSTRAD, ATARI, BBC, CBM, MSX, SPECTRUM etc.

As something of a change, this issue's column has been graced by MICHAEL JAMPEL (perhaps best described as a computer tactician), and his views on how to get the best from DIY micro-wargaming. So here is an overview: from playing games with wooden blocks and rubber bands to . . .

# SILICON SIMULATIONS

## CONFINING CONFLICTS

**A**wargame is an attempt to simulate wars and battles of the past, present and future. Common periods for wargames are the Ancient World (Roman), the Napoleonic era and the Second World War. It is possible to simulate modern events such as the Arab-Israeli wars and even to imagine future conflicts between alien or extrapolated technologies and worlds. The first wargame (as we understand the meaning of the word today) was probably Knossos' which was used to train Russian officers in the 17th century. This used small blocks of wood to represent the various units, such as infantry, cavalry and artillery.

British wargaming took off when HG Wells published a book called Little Wars in which he used toy guns to fire pellets at each other's lead figures. Nowadays, some people use bits of cardboard with the name and abilities of the unit written on them, while others prefer spending hours painting models and scenery. Games can even be played with cardboard for tanks and modules for ammunition. However, as this is unlikely to paint a true picture of real battles, proper sets of rules have

been written. Having decided the scale of the conflict (whether between two towns or two continents), these comprising two tanks, for example, could be written. Tank A is superior to tank B so it can hit a target further away. There is always an element of luck in the real world, so the relationship is modified, tank A hits the target if player A throws four or more (on normal dice) whereas tank B hits on three or more. So now it's clear that although tank A is capable of greater range, it is less likely to do damage. Of course, the example fails to take many of the complexities of firing a tank's weaponry, but from such considerations do sets of rules evolve.

Fighting in Ancient Greece involved spears, stings and swords. Although weaponry has since progressed (and so have tactics), certain things remain constant. Supplies must still reach forces hundreds of miles away; only the means to transport them have altered as modernised transport has replaced the horse. This increased sophistication has been mirrored in wargaming; special rules now determine whether or not a soldier obeys his orders as well as comparing hundreds of different weapons and endeavours of strategy. A professionally written set of rules may be a hundred pages long and cost as much as £20.

Often wargamers cannot find someone who shares their interests locally and so self-wargaming has developed. Models are available, which describe a certain set of events given a particular set of circumstances, and so the opposition can be said to be programmed.

SOFTWARE FOR YOUR AMSTRAD!

Retailers don't always have everything in stock you might want, but if it is within our power to get it for you, then we will. Any of the software reviewed in this, or any, issue of AMTIX! can be ordered using the form below — in fact any available software for the Amstrad that exists we undertake to do our best to get it for you.

AMTIX! Mail Order is backed by the resources of Newsfield, which (in association with the magazines CRASH and Zzap!64) has been supplying over 100,000 Spectrum and Commodore 64 owners with mail order items for over two years, so you can be sure of the very best in service.

There's no mail order catalogue involved — just use the prices quoted in the pages of AMTIX! or the known retail price. If you have any queries, just ring the number shown on the form and our staff will advise you. Anyone may take advantage of the discount coupons on the form which allow £1 off orders worth more than £20 and 50p off orders worth more than £10. Postage and packing is included in the price of the game.

# SOFTWARE FOR YOUR AMSTRAD!

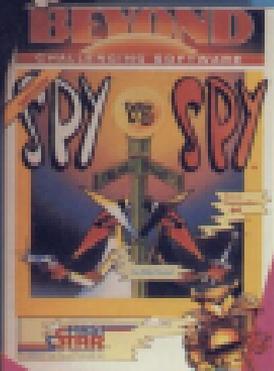

Nothing could be simpler — fill in the form today and order whatever you like!

# WIN ZOIDZILLA in the

## DESIGN A ZOID COMPETITION

### Your Chance to Give Jeremy (I Want A Zoid) Spencer something new to dream about

The helpful David Martin, Big Cheese at AMT/FIXE, the company which is bringing you ZOIDZILLA, the game, has got together with the Zoid People at Toys to offer you the chance to win your very own ZOIDZILLA. And a copy of the game, and a Zoid and a Big Zoider! Twenty winners will pick up a copy of Martin's game, designed by the Electronic Period Company, a great zoid and a poster. Then thirty more winners will have their very own Zoid poster to pin up on their bedroom wall.

So that's the prize bit out of

the way; what have you got to do, in order to bag the cool Jeremy Spencer to Zoid ownership in this competition? It's Okay folks, I've saved Spencer from entering the cone — 100. Well, in the game, you measure out with a Zoid, sitting in its remote cockpit and travelling over a hostile planet, doing battle with the baddest zoids on your quest to reassemble Zoidzilla.

The game has a real mixture of strategy and arcade action, and is controlled with the now-famous cone.

► To win a prize too, you'll have to sit down and design a Zoid. You can go as far as you like with your Zoid design, from sketching out the basic components and weapon systems to submitting a complete specification accompanied by a full set of technical drawings in isometric projection. Use as far as you like!

And if you really want to round off your entry, you might wish to provide a little picture of your Zoid in action on the surface of the planet Zoidzeta. Put together a little Zoid portfolio, in fact, as if you were the designer

of the new fighting machine who had to get his idea accepted. ■

Prize to keep you busy, thinking and designing, over the Christmas '88 ending season. Get your entries in by the end of January, and we'll make Jeremy judge the competition on 20th of that month — with any luck we should get a colour snap of him going gloop with envy.

Entries please, to I WANT TO MAKE JEREMY SPENCER, AMT/FIXE MAGAZINE, PO BOX 16, Ludlow, Shropshire, SY8 1DN

### COME UP WITH THE ULTIMATE COMBAT ZOID AND WIN, WIN, WIN

# SUBSCRIBE TO THE LIVELIEST MAGAZINE AROUND AND BRING NEW LIFE TO YOUR COMPUTER

When you buy AMTIX you can be sure of getting the best, most up-to-date reviews and information for your Amstrad computer every month. Hardware, software, peripherals and news are all given superb coverage in what you think has to be the definitive Amstrad magazine. (Of course we're biased, but isn't that life?) But most important of all, AMTIX is great to read. Missing it is not a wise thing to do. None, if you subscribe to our illustrious journal, you will have all of this coming to your door with no more effort required of you other than opening the magazine, sitting back and enjoying it. You already know from this issue, what a great magazine AMTIX is . . .

As a subscriber to AMTIX, you also receive other benefits — 50% off every item ordered from AMTIX! Mail Order which, together with CRASH and ZAPP! Mail Order, is one of the biggest mail order software houses in the country. More details on that are located elsewhere in this issue. And, as a subscriber, you will also receive discount benefits through any subsequent subscription offers. How can you resist?

AMTIX! has got together with HEWSON CONSULTANTS to give you a fantastic subscription offer — any two of the great games featured below OR the indispensable ZAPP Assembly Programming Package are yours ABSOLUTELY FREE if you take out a year's subscription now!! That's a deal that could be worth more than the actual cost of the £195 (post included) annual subscription fee. All you have to do is fill out the form and send in your payment, choose your free software and we'll do the rest.

Subscribe to AMTIX!

# MORE WHEEEEE, SPLAT (GENTLY)

And yet another update on how the AMTIX!/CRASH/ZZAP! Dr Bernardo and Action Group charity parachute jump is progressing. C'mon people, we need your votes to push some of our staff out of a high-flying plane — they want to go — they really do . . .

I suppose that it was inevitable that those who didn't really want to jump should attract the most votes. ZZAP!'s very own Mr Kigsalt seems to be at the top of the list and his very concerned when he asked me how he should go about getting out of this mess. I suggested that he should try being generous to people which would result in his being ignored! Of course the main alternative would be to send a few votes in himself, to try and work his way down the list. He put the proposition to his bank manager who simply refused to advance Julian the necessary funds. Stranger thing was, the very next day we had some votes from a bank manager, for Julian!

Francis Frey, The Newsfield technician, is more than a bit disappointed that he is lying only eleventh in the jump table. I am a little surprised by this as Franco writes quite a lot for all three magazines, mostly in graphics packages, so he really deserves to be considered. Someone at the last ZX Microbit really got his finger on Franco's problem, when he declared that Franco 'was a really nice guy'. The voting interval seems like for the Newsfield equivalent of a

video nasty, hence the strong shaking by the likes of Gary Fenn, Julian Rignall and Robin Candy. Send a nice guy alert — Vote for Franco.

While we are on the subject of video nasties that reminds me of Mr Candy, who is truth is a good

bloke, he's just misunderstood. There seems to be something of an ego battle being conducted between Messrs Candy and Mangrum. Each of them use the number of votes as a measure of popularity. This has naturally put Lloyd in a very difficult position, he isn't keen to allow his head body to be eyed from the back of a Hercules. He is, how-

ever, just as determined not to be shown up by that little jumped up pale person. The CRASH Editor Graeme Kidd seems to be attracting more votes than he bargained for, so many in fact that the worried man was caught actually trying to edit the jump table. I have now taken steps to ensure that the table is kept where Graeme can't find it, on his desk.

The software industry continues to donate prizes. Among the latest contributors are Doss, The Hit Squad, Executive and Microimage. The boys from Microimage, Paul however to be exact, sent us a super letter and what must be Lloyd's most arduous job, as appalling in fact as that it would be impossible to print it. We can, however, make it available to anyone who wants to see it — for a mere five votes a week. And yes Neil, we would like to hear the one about Mr's Hercules.

The Rain-Jam Cooperative have promised to send us a bumper box of prizes and a respectable block of votes. A sudden burst of generosity perhaps? Well not entirely, it seems AMTIX's Sean Masterson has spent them, Flare Jans, far from being a bank of waffles, quickly calculated that

sending a substantial number of votes for Sean would be a lot cheaper than paying the train fare for their heavy mob to come all the way up from London. Smart.

Even John Edwards, the client liaison person, has collected a vote! As yet I have been unable to track down the source but suspect that it may have come from an advertising agency, if so, send more. The Army would be truly grateful of the opportunity to test the lift capacity of a civilian-laden Hercules. I can think of no better way than by sending John, Graeme Kidd and Gary Liddon.

Remember, whoever you choose as a victim, never forget that every penny you send will go towards making a handicapped person's life easier.

This month's voting recommendations: **FRANCO FREY** because he's dirt enough to really want to do it, and **GARY LIDDON** because he thinks he's man enough to.

Next month we shall publish, for the first time, the Jump Table so far together with the pleas and excuses of the top six.

I want . . . . . to jump out of a very high-flying Hercules. (He or she may use a parachute at their own discretion)

I enclose a donation of £ . . . . . (minimum of £1.00) and no coins, please. We get charged for receiving them.

I am frequently known as . . . . .

and can be reached at . . . . .

Postcode . . . . .

SEND YOUR VOTES AND LOOT (NO COINS!) to:

## THE COMPETITION BIT

Name three flight simulation games

(1) . . . . .

(2) . . . . .

(3) . . . . .

In fifteen words or less, using your skill and judgement and a pen, complete the phrase below in the most apt and original way:

I WANT JEREMY SPENCER TO JUMP BECAUSE

# Brrrrrrrr ... Tick click tickaty tick ... Beeeeeeeeeeeeeep

## Plug into Telecom and let the chips chatter

With their PCs on after you and Straddles can enjoy getting out and about together. Meet at some of wonderful computers, form a meaningful relationship with a mainframe and get to know other Amstrads. This is your Amstrad's chance to get out and go online.

The **GEC Modem** is rated as their professional range. The modem operates at 19200, 9600, 7500 or at a (resale) 1200/1200. An unusual feature of the DATA CODE 1 is that it draws its power from the phone socket and Faxcom don't mind, because they approved it. Altogether this is a very smart and reliable package with which any Straddles would like to be seen.

To drive the modem you will need a serial interface and a reasonable chunk of software. **Honeysoft** have offered ten of their highly versatile interfaces together with the necessary software. The **Honeysoft Interface** allows dual-channel operation so you can use CP/M 2.2 to the full. It also boasts a full X-on-X off implementation allowing software handshaking from BASIC. To reduce the problems caused by cable connections the interface automatically enables unused handshake lines, so it won't get angry when a pin is not connected. The software supplied with the interface supports full Prestel emulation with an enhanced character set and two screen modes. Full software support means being able to download programs and games over the phone network. Should you want to talk to the thousands of Telecom Club then the scrolling software also allows this, together with the number of Amstrad and ASCII files. Incoming data can be spaced (buffered continuously) to printer or disk.

Just so you can have somebody to chat to, **Micronet** are giving away ten, one year subscriptions. **Micronet 800** puts you in touch with 80,000 other overgiving you access to news, games, gossip, Agency Burs, the famous Wednesday night chat

Have a magic moment with a modem, courtesy of GEC, HONEYSOFT and MICRONET who have each donated ten prizes, each of which would be worth winning alone, but all three together... can you cope?

line and, of course, the cheapest and fastest postal service in the land. Mailbox electronic mail. The subscription includes access to the 300,000 pages of information on Prestel including everything from international news to the length of a Mini Metro. Dialing up Micronet is a lot cheaper than you might think, 98% of telephone subscribers are only a local call away and the service is free in the evenings and at weekends.

For both a superb prize you might expect to have to race Heave and Earth to win it. Not at all, the competition is simplicity itself. If you look at the drawings below you will notice that there are some differences. Yes, this is a spot the difference, but with a difference — wasn't it? It's a little more than many differences there are.

Compare the two pictures until you have gone foggy-eyed and then circle the differences

on the right hand picture. The last bit is easy, but vital. Write your name and address on the form below (you would be surprised!). If you prefer you can photocopy the page but please don't be tempted to send more than one entry, the competition winners are specially trained to spot the cheats.

Write on the back of the envelope the number of differences that you spotted and put your address on the front. **SEND TO: GEC/COMP. AMTIX, PO BOX 15, LUDLOW, SHROPSHIRE, SY8 1DB.** You must do all this by the 30th, January 1986 because that's when the competition closes.

Name .....

Address .....

## IN THE LAST FIVE YEARS

Black and white frame grab put into memory from a video camera of a forest which was then coloured using PICTEX's Designer software.

computer graphics techniques have improved dramatically, partly owing to advances in hardware and partly owing to improvements in software design. But the most significant development in the past half-decade has been a dramatic increase in the amount of computer graphics capability your money can buy.

Perhaps the spectrum of the very bottom end of the market, nevertheless, running software such as The Font, some quite spectacular effects may be created on the screen for what amounts to peanuts, price-wise. At the top of the range is a system involving Cray computers capable of creating complete, incredible detailed animated sequences which can be used to feature films. You can be talking in terms of \$10 billion calculations to produce one second of animation at this level, though... all a fair much for the 386 processor!

But you don't have to have a budget with lots of zeros after the pound sign to become involved in computer graphics — a few thousand pounds will get you up very nicely with a system like that

made by PICTEX GRAPHICS which can fit drivers with a BBC computer. And for less than twenty thousand pounds it's possible to acquire systems capable of producing sophisticated images suitable for professional video applications such as that used and widely known by HBO.

The applications for computer graphics are many and varied — and the range is growing daily as the price of the equipment renders the application of such techniques viable for a wider range of organisations. A great deal of progress has been made in the field of graphic design and printing — it's now possible to produce an entire page of a magazine or newspaper on a VDU screen, adding text, headlines and pictures and then sending it to a printer which prepares the plates from which the finished page will be printed. Even entire newspapers and magazines will be produced this way.

Computer graphics are being applied increasingly — to produce brochures and catalogues. Using image recorders, film transpar-

## PICTURES HELD IN RAM

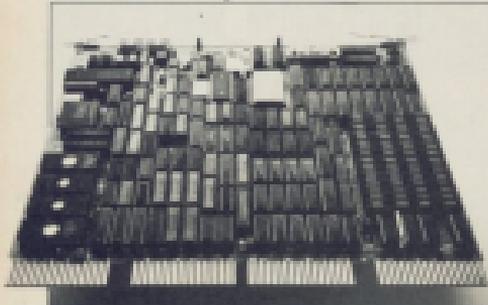

Hand drawn picture input to the PLUTO system using the digitizing tablet

A business-type graphic produced by the IMAGE BUREAU, a firm which specializes in such things. The aircraft are taken from a library of images held in their computer's memory

An example of the kind of chipper's policy involved in a specialized graphics systems nowadays. There's probably enough to build half a dozen Amstrads and still have change....

movement in an assembly holding the computer's memory as a representation of the solid object or device. A great deal of time and expense in development and testing of prototypes can be saved using such techniques. Drafting systems can produce blueprints and technical drawings about five times as fast as a human draftsman - and updates can be entered and the whole drawing re-output up to 25 times faster than it can be done manually.

It is in the fields of video, film and television that computer graphics have had their most obvious impact. However, not only are the budgets available for producing advertisements, films and television programs generally large enough to warrant the most expensive equipment, but the end results are seen by a massive audience. Systems such as the LUMINEL PAINTER, which literally allow an artist to manipulate, draw and paint video images have been responsible for some very sophisticated video graphics. And techniques have now advanced to the stage where it is viable to shoot a film on video, edit it and then put the finished copy onto film for distribution on the traditional cinema circuit.

articles can be made from a computer generated image at such a high resolution (8,000 lines) that the finished result is as impressive as real artwork.

In the hands of an artist/illustrator, a computer graphics system can really come to life, allowing the artist to work with the medium in a way that is precluded by traditional techniques. Foreground, midbackground and background elements of a picture can be held in memory and stored separately. A building drawn on and held in background memory, for instance, can be enlarged, reduced and moved around using the most sophisticated systems, without affecting the rest of the picture.

In industry, Computer Aided Design and Drafting techniques now exist in everything from car structures and wing laminations. It's possible to simulate

The many turns full circle however - another IBM computer, the humble Spectrum, has already been used to provide graphics for broadcast TV programmes. Designer Dave Bennett used his Spectrum to produce a graphic sequence for a program on banking for Central TV this year - and a couple of years ago, the end credits for Central's MARCA MICRO MISSION were written on a 164 Spectrum by Simon Goodwin, the first video for our state magazine, CROSH.

Amazing what can be achieved even with a computer as small as 164 Spectrum using BASIC. This little sequence formed the end credits for Central TV's first MARCA and CROSH videos.

PALACE  
software

Dear Palace Software,

Name: \_\_\_\_\_

Please send me \_\_\_\_\_ cassette(x)  
of Cauldron (Amstrad) @£8.99

Address: \_\_\_\_\_

Please add 80p P&P to your order. Payment  
by cheque to Palace Software, Postal Order  
or by Access/Barclaycard No.

Postal Code \_\_\_\_\_

Update:

If you're concerned about your safety, don't have to get home, then all right, in a job-related situation with someone involved, worried about the fact that you will be home alone for you. The presence of the "Avatar" team may have their "Avatar" team in place of an individual from the Avatar team. It may be hard, extremely hard...

# THE TERMINAL MAN

Some bits were downright packed... the city of New York, for example...

...of the vicious death... for... (LATER) ...

...they will... of... (LATER) ...

...will... on... (LATER) ...

...and... the... (LATER) ...

NO! NO! PLEASE... NOT... (LATER) ...

BREAKFAST... DID... (LATER) ...

YOU SHOULD... HAVE... (LATER) ...

... (LATER) ...

GOOD... I'll... (LATER) ...

THE... (LATER) ...

GOOD... (LATER) ...

SPEAK... (LATER) ...

NO! NO! NO!... (LATER) ...

... (LATER) ...

THEY  
WONT BE  
DYING...

CORRECT, THE  
ARMIES ARE COMPETING  
WITH EACH OTHER, THOUGH  
OF COURSE, ACTIVITY DOES  
ADD UP TO THE BOMB — OR  
COULD BE THAT THE BOMB, IT IS  
NOT WELL GUARDED?

YOU WERE RIGHT,  
CROSSING THROUGH  
WAS A MISTAKE  
NOW...

I KNOW  
IT IS ONLY  
LATE AFTERNOON,  
IM HERE...

THESE ARE SOME, TWO WHO  
ONCE IN CONTACT OF SENSITIVE  
CENTRE — LAUREN INTERROGATE'S  
LEFT IN LEFT OF THE MEMORIAL  
WILL BECOME OUTSIDE...

WHAT? WHO  
ARE YOU TALKING?  
NO ONE CAN...

LEAVE IT,  
EVERYONE  
HE CAN  
DO IT?

DO I DON'T  
UNDERSTAND  
NOW, BUT ALL  
THESE ELEMENTS  
WILL BE HELD  
TOGETHER, WHEN  
THE PROJECT  
CRASHES...

HE'D  
NEARLY DIED  
WITH THE OLD  
SYSTEM, STORING  
Bombs...

PRETTY HEAVY TRUCK,  
BUT HE COULD  
CLEAN UP A FORTUNE  
MANUFACTURING THE  
BOMBS AND REPAIRING  
BACK ON EARTH,  
SA, ONLY...

WHAT DO YOU  
MEAN ABOUT  
BOMB?

OH?

SCARE THEM?  
COULD  
SOMETHING  
WENT ON?  
THE DOOR?

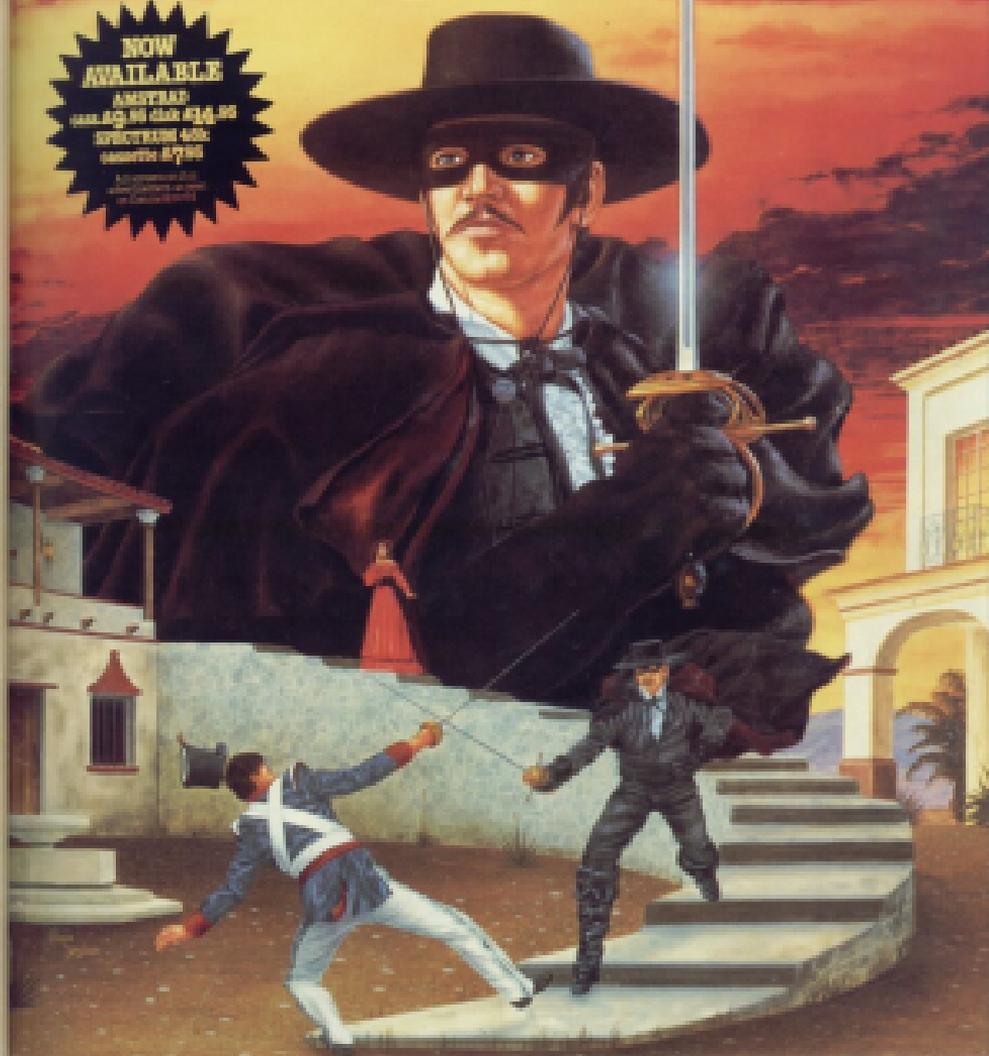

I CAN  
HEAR IT'S  
READY THERE  
TO BE TAKEN  
DOWN, BUT  
WHY NOT  
LEAVE LEFT  
THE DOOR...
